Down in South Water street there are fourteen chicken slaughter houses that turn out an average of about thirty thousand dead birds every twenty four hours. The process is simpler and more rapid. There is an institution near the corner of Clark street which alone is ready to kill off the feathered tribe at the rate of 10,000 a day if the consumption of chicken meat warrants the wholesale slaughter. The chickens are brought to the place by thousands and turned loose in immense coops that occupy whole floors, and there they crow and cluck and eat corn until the remorseless hand of the professional butcher closes on their necks. When this happens there is no time for another crow. The needle-like point of the keen knife that the butcher carries in his right hand is deftly inserted behind the victim's ear, and the next instant its lifeless body is shooting through a spout that leads to the floor where the "plumping" room is located. It is all done in the briefest part of a second, as will be more readily understood when it is stated that this butcher, single handed and alone, can stab 10,000 chickens in a day of ten hours. It does not make any difference to him whether the victim is a spring chicken or a full fledged hen. One falls as easily before the plunge of his knife as the other.

But it is in the "plumping" room that the hen has a chance to exhibit its vitality. In one corner of this apartment, which is always half filled with wet feathers, is a big iron tank full of boiling water. Into this the bodies of the birds are thrown as fast as they fall from the butcher's spout, and after they have been there half a minute they are hauled out by the legs and stripped of their feathers. This process requires but two sweeps of a hand-like hand, and the bird, denuded, is flung into a cooling box. From there they go downstairs to another cooler, and then they are packed for shipment.—Chicago Herald.

### Artisan's Dwellings in France.

In connection with the strikes in France, and the general movement among the working classes which they may portend, it is interesting to note some recent efforts to improve workingmen's dwellings. At Rouen a society has been formed, with a capital of £25,000, which has erected six blocks in the center of the town, capable of accommodating ninety families. At Lyons a similar society has built five blocks, accommodating sixty families. The rents are fixed at about the average rate of the several districts, but the tenants have complete sanitary arrangements and a good water supply into the bargain. In each case a director of the company visits every tenement once a week with a view of receiving complaints and entering into kindly relations with the tenants. The companies have succeeded so far in paying 4 per cent. on the capital invested.

A feature of the scheme at Lyons is that a portion of the capital was provided by the local savings bank, and it is hoped to induce similar banks at Marseilles and elsewhere to do likewise. But even so it will be a long time before France can vie with England in provision of sanitary dwellings for the working classes.—Paris Journal des Debats.

### Method of Electric Writing.

A small needle is vibrated to and fro by the alternate currents. Attached to the end of the needle is a siphon about the hundredth part of an inch in diameter, through which ink flows constantly. The point of the siphon or pen rests on a strip of paper which is automatically pulled under it, and as the needle vibrates the pen marks the vibrations in zigzag lines on the paper. The operator reads the signals off as they pass before him and writes them on the usual blanks, while an attendant coils up the paper strip and files it away. There is no noise as with a Morse instrument, and no "calling." The paper goes along continually and when the operator at the other end of the cable has a message to transmit he goes right ahead with it. The sending operator sits to the right of the receiver and manipulates two keys side by side, one for the positive and the other for the negative current. There is no sounding instrument except the keys, and the operator has no means of knowing how well he is doing, except that when it does not reach the other end distinctly the sending operator there notifies the receiver at this end, who tells his associate where to repeat from.

A Morse operator unacquainted with cable work would think the sending operator was merely "drumming" on the keys, as there appears to be no system about it to the uninitiated.—New York World.

"Anæsthetic revelation" is the name which, according to Mr. Xenos Clark, has been applied to the sensation of recovery from the anæsthetic effect of sulphuric ether. For a brief instant, just before the return of consciousness, the subject seems to see an intense perception of what seems to him at the time the true explanation of the universe.—Arkansaw Traveler.

### A New Portable Cooker.

It is stated that the French government has ordered 20,000 of the new portable cooker for camp purposes. A few days ago it was shown in London to a gastronomic and scientific party of people. To prove the powers of the invention, the inventor, Mr. Wanzer, served up a dinner of three courses, which basted itself, for thirty persons, the entire cost of heating and cooking being less than two pence, and the arrangement goes by clockwork. The inventor claims to have discovered a potent heat in steam, and this is the basis of the invention.—Once a Week.

### Sobering the Tipsy Officers.

A Russian officer gives the following account of an incident which happened during the Tekke campaign, while he and his soldiers lay encamped before the enemy who might at any moment attack them. Some of the officers had gone to the tent of a comrade to drink tea, and after tea they had a second course, consisting of cognac and wine. Soon the camp rang with songs.

I dispatched my orderly, with a request that the officers cease singing, but he presently returned, saying that they anxiously desired permission to continue.

What could be done? To remonstrate further with them might in their present condition, result in unpleasantness. As I meditated, the subaltern on duty came up and said to me, in a whisper:

"Your honor, let one of the sentinels fire!"

"What do you mean?"

"I mean fire along the line, as though at the enemy," he explained, with a smile.

I guessed at his meaning, and was highly delighted with it, only an alarm could sober the carousing officers.

"See to it," I said. "Be prudent, don't babble."

I went to my tent and lay down on my bed, that I might not seem to be expecting anything. Five minutes later, from some place far away in the line of sentinels, rang out a dull discharge. It was echoed by another near by, followed by a third and fourth. Shouts were heard, "Alarm!"

The drummer sprang out of a neighboring tent, and beat the alarm. The songs ceased in an instant. Cries and exclamations rang out.

"Where's my cap?"

"Where's my sword?"

"There it is yonder! Give it here!"

"We must run down there as soon as possible!"

The shots became more frequent. The drummer continued to beat with increasing vigor. The garrison rushed from their tents, and took their places along the earthworks. Soon everything quieted down. I made the rounds of the fortifications, and found the officers at their posts.

For a quarter of an hour we stood thus, in expectation of an attack, then I dismissed the company to their places, and the camp returned to silence.—Youth's Companion.

### Some Peculiarities of Indians.

If an Indian is killed in a quarrel his relatives are usually appeased by payment. I remember once an overbearing young Assinaboine buck came into the Milk River agency and bent his bow and arrow on the agent's pet dog. The agent warned him if he shot the dog he would kill the Indian. The young buck shot his arrow, the agent killed him. We expected to have some trouble, but the grief stricken father came forward on behalf of the relatives, and claimed that, in consideration that the young man, being such a good buffalo runner, the agent must pay for the loss of such a person a red blanket, a piece of calico and four pounds of sugar. He complied with their demands, but the vengeful relatives thereafter adopted him as their banker. The mother and other relatives of the slain young man scarcely ever met the agent without embracing him and with endearing epithets begging for something more in remembrance of the good buffalo runner.

No gifted funeral orator can equal or convey the impression of the mournful tenderness, the exulting pride or the gloomy despair expressed by the untaught savage in this mere act of formality. An Indian, man or woman, will be laughing and dancing, in a moment the merry circle will be left, and the next moment the same person will lift up his voice in heart breaking accents, the plaintive notes will weep tears of mournful tenderness, again starting defiance and war will breathe with fierce energy the deeds of the silent dead; then as the sorrowful recollections, inspired by the fate of the fallen relative, the high pean sinks to such supplicating despair as suggests a lost spirit lamenting its dismal fate. And all this is a mere formality, for the next moment the weeper may be the merriest of the laughing throng.—Forest and Stream.

### Literary Work Without Pay.

When Rider Haggard wrote "Mr. Meeson's Will," probably the queerest of all his queer stories, he let himself out with a vengeance upon the skinflint section of the noble guild of publishers. The Meesons of the trade may possibly be the exceptions, but whether that be so or not, there certainly are too many of them. A medical friend told me the other day about one of them in New York. The New York Meeson's publishes medical works on an extensive scale and issues two medical periodicals besides. The periodicals are made up mainly of professional papers, prepared by doctors from experience in their own practice. Not one of these papers, my friend said, is paid for. The house makes it a rule not to pay any of the contributors to its periodicals. It pays only the editors, and these as little as possible.

"But," I asked, "can it really get articles from doctors without paying for them—articles, I mean, that are worth printing?" Yes, he said, plenty of them; not of the best quality, perhaps, but interesting and often useful. Many doctors like to keep their views before the profession and before the public, too, and they do it in this way. They write the article in their spare moments and are satisfied with publication as compensation. Their names are printed, the articles attract some attention, and their purpose to keep themselves before the public is accomplished. The publishers make a good deal of money by these periodicals, especially in the advertising department, and nearly all is clear profit.—New York Cor. Detroit Free Press.

### A Prophecy About Books.

"Second hand book stores are increasing," said a gentleman the other day, "and several gentlemen are making collections of old books. Some buy any books, just so they are old, and others make special selections. New books are almost as cheap as old ones. Neither are in great demand; the newspapers of today publish all that is valuable, past, present and future. Quarterlies crowded out books; magazines made way with the quarterlies, and now the newspapers have almost filled the place of the magazines, there not being as many of these as there were before the war, a quarter of a century ago. As soon as capable press and ink are invented to print at high speed the fine lines of an engraver, then the fine illustrations of the magazines will appear in the dailies and the former will fade away.—Louisville Courier-Journal.

There are thirty-seven tunnels of more than 1,000 yards in length in England, the longest being that of the Severn, 7,664 yards.

### Honesty by Weight.

"Is that boy the new juntor?" the president of the bank asked the cashier, pointing to a youth in the office.

"Yes, sir."

"Have you tested his honesty?"

"Yes, sir. I left him alone in your room for half an hour or more to count a pile of gold, which I told him had not been counted."

"Of course it had been counted?"

"No, sir."

"That was rather risky, wasn't it?"

"Not at all," replied the cashier; "I weighed the gold myself first."—Pittsburg Dispatch.

Working Asses ATTENTION!

We are now prepared to furnish all classes with employment at home, the whole of the time or for their spare moments. Business new, light and profitable. Persons of either sex easily earn from 50 cents to $5 00 per evening, and a proportional sum by devoting all their time to the business. Boys and girls earn nearly as much as men. That all who see this may send their address and test the business, we make this offer: To such as are not well satisfied we will send one dollar to pay for the trouble of writing. Full particulars and outfit free. Address GEORGE STINSON & Co., Portland, Maine.

FIRST-CLASS RESORT.

Deep SEA WONDERS exist in thousands of forms, but are surpassed by the marvels of invention. Those who are in need of profitable work that can be done while living at home should at once send their address to Hallet and Co., Portland, Maine, and receive free full information how either sex, of all ages, can earn from $5 to $25 per day and upwards wherever they live. You are started free. Capital not required. Some have made over $50 in a single day. All succeed.

$50 If you think of expending fifty or one hundred dollars in advertising send us a copy of your advertisement and we will tell you (free of charge), what will be the best possible investment for you to make. Send 10 cents for our 176 page pamphlet, Address, GEO. P. ROWELL & CO'S, NEWSPAPER ADVERTISING BUREAU 10 SPRUCE STREET, NEW YORK.

Invention has revolutionized the world during the last half century. Not least among the wonders of inventive progress is a method and system of work that can be performed all over the country without separating the workers from their homes. Pay liberal; any one can do the work; either sex, young or old; no especial ability required. Capital not needed; you are started free. Cut this out and return to us and we will send you free, something of great value and importance to you, that will start you in business, which will bring you in more money right away than anything else in the world. GRAND GIFT FREE. Address TRUE & Co., Augusta, Maine.

INDEPENDENCE, CAL.

SATURDAY, NOVEMBER 10, ..... 1888

Weather still warm and pleasant.

J. C. Eddy has been elected Supervisor in the 5th District.

Scott Broder came in from Deep Spring last Monday. He left town next morning again

Doctor Bishop's men are making fair progress clearing and leveling his land. About two hundred and twenty acres are now ready for the plow.

Jack Dunphy came up from Cerro Gordo and remained a few days in town. He has been stopped from working a mine at Cerro Gordo by an injunction taken out by Mr. Wheeler.

It is reported that Knapp and Laws, of Hawthorne, Nevada, will soon put up a large brick building at Laws, in Owens Valley, and establish a general merchandise business there.

John Kremkow, an old resident of Benton committed suicide at that place on Monday a week ago by shooting himself through the head. He had been drinking. He was aged about 53 years.

At Independence the interest in the election was very great, chiefly for county officers. A large crowd was on the streets all day; there was very little talk but a great deal of earnest work done.

The Eastside canal is now making rapid progress. Camp was moved last Saturday close to where work is now going on. This saves a great deal of time. Mr. McIver is pushing the work vigorously.

J. V. Skinner has built a residence on his land at Georges Creek. He is moving there now and will at once begin work on the improvement of his land. This is one of the tracts irrigated by the Stevens ditch.

Last Sunday evening Frank Redding was thrown from a buggy at Virginia City and his skull broken. The horse he was driving took fright and caused the accident. The man was aged 53 years; it was thought he would die.

It is worth noting that at Independence seventeen Democrats scratched Eldred, the party candidate for Sheriff, and the same number of Republicans scratched Boland, the Republican nominee. Eldred received eight American votes and Boland two.

Mr. S. Zaun has made a number of improvements in his tailoring establishment at Lone Pine. He has lately received a full line of samples of winter goods and is prepared to furnish perfect fitting suits at low prices. Give him a call and examine his stock.

The necessary steps have been taken for the organization in Inyo county of a Parlor of Native Sons of the Golden West. Circular letters will be issued in a day or two inviting native Californians to join the order. All young men of eighteen and over may become members.

A number of the Independence boys went down to Lone Pine last Wednesday night and participated in a very enjoyable social. The affair may have been on the Irishman and the bull order but they had a good time "just the same" and the Cleveland hat made the rounds in great shape.

Greenly and Broder got returns last Monday from a shipment of ore sent to San Francisco from their mine at Deep Spring. The ore yielded three hundred and seventy-three ounces silver per ton. The mine has been producing this quality of ore during the past fifteen months and is still looking well.

The last issue of the *Chronicle-Union* reports the death of a young man named Scotty Summers. He had been delivering a load of wood at the cars at Mono Mills. He fell from the wagon to the ground, the team moved forward and the wagon with its heavy load went over him and crushed his life out. He was aged nineteen years.

On last Wednesday Andrew J. McMurry died at the residence of his parents near Big Pine. He was aged twenty-five years. He was heartily esteemed by all who knew him and his parents have the heartfelt sympathy of a wide circle of friends in their grief for the loss of a good son. A very large number of friends attended the funeral on Friday. Inflammatory rheumatism was the cause of death.

### Bulletins.

The following dispatches were the latest received up till time of going to press:

Complete returns from 1123 precincts in California out of 1590 outside of San Francisco give Harrison 87,546, Cleveland 76,922; Beatty 75,000; Works 75,258; Searls 69,270; Sullivan 69,418. Democratic majority in San Francisco will be less than 2,700.

Complete returns from Alpine give Harrison 53, Cleveland 27. Complete returns from Eldorado, Harrison 1355, Cleveland 1456. Congress, Biggs 1482, Cragan 1321. Shasta, Harrison 1461, Cleveland 1381. De Haven 1398, Thompson 1388. First Congressional District, complete returns from all except Del Norte, Lake, Lassen and Modoc give De Haven 15,235, Thompson 14,435. The remaining counties in '84 gave Thompson a plurality of 455.

The following was telegraphed from Chicago Thursday evening:

The evening *World* says: "Chairman Brice, of the Democratic National Committee, concedes the election of Harrison." The New York evening *Press* says: "Harrison has 233 electoral votes; Cleveland 168, counting Virginia to Cleveland, but that State is still in doubt and it may take the official count to determine the result. Indications are that the Republicans have a majority in the Legislature in West Virginia and Delaware. This would give two more Republicans in the United States Senate. Indications are that the Republicans will have a small majority in the next Congress."

Returns from New York gave Harrison a plurality of 12,000.

The majority for Hill, Democratic candidate for Governor, would exceed the plurality for Harrison.

LATEST.

SAN FRANCISCO.—Summary so far is that Harrison has carried every northern State except Connecticut and New Jersey, and has also carried West Virginia. Indications are that the Republicans will have a majority in the State Legislature and will elect a United States Senator. There are large Congressional gains. The Republican majority is estimated at from three to fifteen.

### Election Returns

The following is the returns on the principal county offices:

| PRECINCTS. | Eldred | Boland | Mack | Collins | Moore | Walker |

Number of fair days ..... 3
Number of cloudy days ..... 2

D. C. GAUNOW,
Private, Signal Corps.

### Fire.

On Wednesday night about twelve o'clock fire broke out in a small building belonging to J. C. Irwin and adjoing his residence. The place was used as a storeroom for articles and goods for family use. Three different streams were turned on from the water works and although the storeroom was completely destroyed the dwelling was saved. The water works saved the town. The loss was about six hundred dollars. No insurance.

It must have been just after the votes were counted that David wrote: "I said in my haste, all men are liars."

### NOTICE.

Notice is hereby given that from and after this day I forbid any person or persons, or firm, from trusting or giving credit to my wife, Jenney Symmes, either in the State of California or out of it, for I will not be responsible for any debt she may contract.

J. W. SYMMES.

## AGAINST CORSETS.

**Stays Not at all Necessary to Make a Good Figure.**

No mother should allow her daughter to wear stays while she is under her charge. If a girl never begins to wear corsets, I promise her she will not require them. But woe if she once begins to wear them, for then she will not be able to do without them, for they weaken the spine, and once weakened it can not dispense with the false support it has long depended upon. Believe me, the most beautiful and graceful figures are those which have never been in steel or whalebone. I will risk all I possess in a wager that if you never put stays on a little girl she will not require them when she becomes a woman, and she will have a figure that every one will admire and covet. A young girl with a slight, supple, yet firm figure, certainly needs no corset; and a woman, however stout she may be, will always look fleshier and stiffer in stays than without them. Loose jackets and flowing draperies are far more becoming to a stout figure than tight stays; and as for young, slim girls and women, all they need is a band round the waist to mark its natural curve.

I, who write these lines, am a stayless being, and I need not blush if I tell you at this distance that my dressmakers used to say that, among all their ladies, there was not one who had a more perfect figure. To use their expression, I was "moulee." You see, I speak in the past tense; years have changed the once youthful figure to more matronly proportions, but I can still exercise, touching the ground without bending the knees, and perform other gymnastic feats above mentioned.

I have proven by experience that the corset is not necessary, and urge all to do without it. An elastic, tight fitting jersey will support your figure quite enough if it needs support.—*Ninon, in Dress.*

—Hasty conclusions are the mark of a fool; a wise man doubteth, a fool rageth and is confident; the novice saith: "I am sure that it is so," the better learned answers: "Peradventure it may be so, but, I pray thee, inquire." It is a little learning, and but a little, which makes men conclude hastily. Experience and humility teach modesty and fear.

—To insure long life, recreation should be a part of our daily life. It makes the busy man thoughtful and keeps the thoughtful busy. It insures health, success, and the accomplishment of more and better work in less time.

—Ambition is full of distractions; it teems with strategems, and is swelled with expectations as with a tympany. It sleeps sometimes as the wind in a storm, still and quiet for a minute, that it may burst out into an impetuous blast till the cordage of its heart-strings crack.—*Jeremy Taylor.*

## A FRENCH BARON'S LUCK.

**A Gautemalan Invests Two Dollars and Now Has Thirty Thousand.**

The assertion has frequently been made that only the poor invest in lottery tickets. A case which came to the observation of an *Examiner* reporter, however, disproves this insinuation.

It is a rather odd story, the one which comes from the semi-wilds of republican Gautemala.

A Baron of France, who emigrated to this portion of Central America shortly after the Franco-German war had terminated so fatally for his country, instead of posing as a gentleman too proud to soil his hands with labor, made the best of his circumstances.

He was in a strange land without funds or friends; the latter, however, he soon secured, for he was industrious, and after working for several years as an overseer upon the plantation of a native planter, he married the planter's daughter and in due time became a planter himself.

His father had, in the day of Louis Philippe, been a director in the Royal French Lottery, so that when the Louisiana State Lottery Company established an agency in his adopted country, he patronized it. His investments, however, did not prove very remunerative until the June drawing, when Baron Blank, as usual, made his visit to town, and, paying two dollars received in exchange one of those white-green-blue slips of paper, which has a number printed in black across the face of it. The document was taken home, and le Baron thought nothing more of the circumstance until one day when he was surprised at receiving a communication from the agents from whom the ticket had been bought, notifiying him to see them at once. The communication rather upset him. Had Dame Fortune at last smiled on him? Had he finally been rewarded for innumerable disappointments? These and many other questions suggested themselves to him, as he hastened to keep the appointment. The truth was soon learned. Baron Blank had bought ticket 90,443 which had won one-tenth of the capital prize of $300,000.

The ticket was sent to Kuhlman, Salz & Co., the leather merchants of this city, who represent the Central American firm where it had been bought. The money was collected through the Anglo-Nevada Bank of San Francisco, and by this time the lucky Frenchman is now in full possession of his $30,000, which he secured by an investment of two dollars.—*San Francisco (Cal.) Examiner*, Aug. 5.

## SOUND BUSINESS PRINCIPLES.

The PACIFIC BANK, of San Francisco, has always adhered to solid business principles, and strictly avoid all speculation. The PACIFIC BANK is a striking example, and is formost among the banks of this coast in stability, resources and popularity, and has often been called the model Bank of the coast.

# Allan Quatermain.

## By H. RIDER HAGGARD.

AUTHOR OF "KING SOLOMON'S MINES," "SHE," "JESS," "THE WITCH'S HEAD," ETC.

(CONTINUED.)

"What I say, monsieur; that devil of a Nasta, he went last night to settle the affair with the archbishop" (Agon). "The guard will leave open the gate leading from the great stair and go away, and Nasta and Agon's priests will come in and kill her. Themselves they would not kill her."

"Come with me," I said, and shouting to the staff officer next me to take over the command, I snatched his bridle and galloped as hard as I could for the spot, between a quarter and half a mile off, where I saw the royal pennon flying, and where I knew that I should find Curtis if he were still alive. On we tore, our horses clearing heaps of dead and dying man, and splashing through pools of blood; on past the long broken lines of spearmen to where, mounted on the white stallion Nylepta had sent to him as a parting gift, I saw Sir Henry's form towering above the generals who surrounded him.

Just as we reached him the advance began again. A bloody cloth was bound around his head, but I saw that his eye was as bright and keen as ever. Beside him was old Umslopogaas, his ax red with blood, but looking quite fresh and uninjured.

"What's wrong, Quatermain?" he shouted.

"Everything. There is a plot to murder the queen to-morrow at dawn. Alphonse here, who has just escaped from Sorais, has overheard it all," and I rapidly repeated to him what the Frenchman had told me.

Curtis' face turned deadly pale and his jaw dropped.

"At dawn!" he gasped, "and it is now sunset. It dawns before 4, and we are nearly 100 miles off—nine hours at the outside. What is to be done?"

An idea entered into my head. "Is that horse of yours fresh?" I said.

"Yes, I have only just got on to him—when my last was killed; and he has been fed."

"So is mine. Get off him, and let Umslopogaas mount; he can ride well. We will be at Milosis before dawn, or if we are not—well, we cannot help it. No, no; it is impossible for you to leave now. You would be seen, and it would turn the fate of the battle. It is not won yet. The soldiers would think you were making a bolt of it. Quick now."

In a moment he was down, and at my bidding Umslopogaas sprang into the empty saddle.

"Now farewell," I said. "Send 1,000 horsemen with remounts after us in an hour if possible. Stay; dispatch a general to the left wing to take over the command and explain my absence."

"You will do your best to save her, Quatermain?" he said, in a broken voice.

"Ay, that I will. Goon; you are being left behind."

He cast one glance at us, and accompanied by his staff galloped off to join the advance, which by this time was fording the little brook that now ran red with the blood of the fallen.

As for Umslopogaas and myself, we left that dreadful field as arrows leave a bow, and in a few minutes had passed right out of the sight of slaughter, the smell of blood, and the turmoil and shouting, which only came to our ears as a faint, far off roaring, like the sound of distant breakers.

### CHAPTER XXI.

AWAY! AWAY!

At the top of the rise we halted for a second to breathe our horses, and turning, glanced at the battle beneath us, which, illumined as it was by the fierce rays of the sinking sun staining the whole scene red, looked from where we were more like some wild titanic picture than an actual hand to hand combat.

"We win the day, Macumazahn," said old Umslopogaas, taking in the whole situation with a glance of his practiced eye. "Look, the Lady of the Night's forces give on every side; there is no stiffness left in them, they bend like hot iron, they are fighting with but half a heart. But alas! the battle will in a manner be drawn, for the darkness gathers and the regiments will not be able to follow and slay!"—and he shook his head sadly. "But," he added, "I do not think that they will fight again; we have fed them with too strong a meat. Ah! it is well to have lived! At last I have seen a fight worth seeing."

By this time we were on our way again, and as we went side by side I told him what our mission was, and how that, if it failed, all the lives that had been lost that day would have been lost in vain.

"Ah!" he said, "nigh on a hundred miles and no horses but these, and be there before dawn! Well—away! away! man can but try, Macumazahn; and maybap we shall be there in time to split that old 'witch finder's'" Agon's "skull for him. Once he wanted to burn us, the old 'rain maker,' did he! And now he would set a snare for my mother" (Nylepta), "would he? Good! So sure as my name is the name of the Woodpecker, so surely, be my mother alive or dead, will I split aim to the beard. Ay, by T'Chaka's head I swear it!" and he shook Inkosi-kaas as he galloped. By now the darkness was closing in, but fortunately there would be a moon later, and the road was good.

On we sped through the twilight; the two splendid horses we bestrode had got their wind by this, and were sweeping along with a wide, steady stride that neither failed nor varied for mile upon mile. Down the sides of slopes we galloped, across wide vales that stretched to the foot of far off hills. Nearer and nearer grew the blue hills; now we were traveling up their steeps, and now we were over and passing toward others that sprang up like visions in the far, faint distance beyond.

We spake not, but bent us forward on the necks of those two glorious horses, and listened to their deep, long drawn breaths as they filled their great lungs, and to the regular, unfaltering ring of their round hoofs. Grim and black, indeed, did old Umslopogaas look beside me, mounted upon the great white horse, like death in the revelation of St. John, as now and again lifting his fierce set face he gazed out along the road, and pointed with his ax toward some distant rise or house.

And so on, still on, without break or pause, for hour after hour.

At last I began to feel that even the splendid animal that I rode was beginning to give out. I looked at my watch; it was nearly midnight, and we were considerably more than half way. On the top of a rise was a little spring, which I remembered because I had slept by it a few nights before, and here I motioned to Umslopogaas to pull up, having determined to give the horses and ourselves ten minutes to breathe in. He did so, and we dismounted—that is to say, Umslopogaas did, and then helped me off, for what with fatigue, stiffness, and the pain of my wound, I could not do so for myself; and the gallant horses stood panting there, resting first one leg and then another, while the sweat fell drip, drip, from them, and the steam rose and hung in pale clouds in the still night air.

Leaving Umslopogaas to hold the horses, I hobbled to the spring and drank deep of its sweet waters. I had had nothing but a single mouthful of wine since midday, when the battle began, and I was parched up, though my fatigue was too great to allow me to feel hungry. Then, having laved my fevered head and hands, I returned, and the Zulu went and drank. Next we allowed the horses to take a couple of mouthfuls each—no more; and oh, what a struggle we had to get the poor beasts away from the water! There were yet two minutes, and I employed it in hobbling up and down to try and relieve my stiffness, and in inspecting the condition of the horses. My mare, gallant animal though she was, was evidently much distressed; she hung her head, and her eye looked sick and dull; but Daylight, Nylepta's glorious horse—who, if he is served aright, should, like the steeds who saved the great Rameses in his need, feed for the rest of his days out of a golden manger—was still, comparatively speaking, perfectly fresh, notwithstanding that he had had by far the heavier weight to carry. He was "tucked up," indeed, and his legs were weary, but his eye was bright and clear, and he held his shapely head up and gazed out into the darkness round him in a way that seemed to say that, whoever failed, he was good for those five and forty miles that yet lay between us and Milosis. Then Umslopogaas helped me into the saddle and—vigorous old savage that he was!—vaulted into his own without touching a stirrup, and we were off once more, slowly at first, til the horses got into their stride, and then more swiftly. So we passed over another ten miles, and then came a long, weary rise of some six or seven miles, and three times did my poor black mare nearly come to the ground with me. But on the top she seemed to gather herself together, and rattled down the slope with long, convulsive strides, breathing in gasps. We did that three or four miles more swiftly than any since we had started on our wild ride, but I felt it to be a last effort, and I was right. Suddenly my poor horse took the bit between her teeth and bolted curiously along a stretch of level ground for some 300 or 400 yards, and then, with two or three jerky strides, pulled herself up and fell with a crash right on to her head, I rolling myself free as she did so. As I struggled on to my feet the brave beast raised her head and looked at me with piteous bloodshot eyes, and then her head dropped with a groan and she was dead. Her heart was broken.

Umslopogaas pulled up beside the carcass, and I looked at him in dismay. There were still more than twenty miles to do by dawn, and how were we to do it with one horse? It seemed hopeless, but I had forgotten the old Zulu's extraordinary running powers.

Without a single word he sprang from the saddle and began to hoist me into it.

"What wilt thou do?" I asked.

"Run," he answered, seizing my stirrup leather.

Then off we went again, almost as fast as before; and, oh, the relief it was to me to get that change of horses! Anybody who has ever ridden against time will know what it meant.

Daylight sped along at a long stretching hand gallop, giving the gaunt Zulu a lift at every stride. It was a wonderful thing to see old Umslopogaas run mile after mile, his lips slightly parted and his nostrils agape like the horse's. Every five miles or so we stopped for a few minutes to let him get his breath, and then flew on again.

"Canst thou go farther," I said at the third of these stoppages, "or shall I leave thee to follow me?"

He pointed with his ax to a dim mass before us. It was the Temple of the Sun, now not more than five miles away.

"I reach it or I die," he gasped.

Oh, that last five miles! The skin was rubbed from the inside of my legs, and every movement of my horse gave me angoisse. Nor was that all. I was exhausted with toil, want of food and sleep, and also suffering very much from the blow I had received on my left side; it seemed as though a piece of bone or something was slowly piercing into my lung. Poor Daylight, too, was pretty nearly finished, and no wonder. But there was a smell of dawn in the air, and we might not stay; better that all three of us should die upon the road than that we should linger while there was life in us. The air was thick and heavy, as it sometimes is before the dawn breaks, and—another infallible sign in certain parts of Zu-Vendis that sunrise is at hand—hundreds of little spiders pendent on the end of long tough webs were floating about in it. These early rising creatures, or rather their webs, caught upon the horse's and our own forms by scores, and as we had neither the time nor the energy to brush them off, we rushed along covered with hundreds of long gray threads that streamed out a yard or more behind us—and a very strange appearance they must have given us.

And now before us are the huge brazen gates of the outer wall of the Frowning City, and a new and horrible doubt strikes me. What if they will not let us in?

"Open! open!" I shout imperiously, at the same time giving the royal password. "Open! open! a messenger, a messenger with tidings of the war!"

"What news?" cried the guard. "And who art thou that ridest so madly! and who is that whose tongue lolls out"—and it actually did—"and who runs by thee like a dog by a chariot?"

"It is the Lord Macumazahn, and with him is his dog, his black dog. Open! open! I bring tidings."

The great gates ran back on their rollers, and the drawbridge fell with a rattling crash, and we dashed on through the one and over the other.

"What news, my lord? what news?" cried the guard.

"Incubu rolls Sorais back, as the wind a cloud," I answered, and was gone.

One more effort, gallant horse, and yet more gallant man!

So, fall not now, Daylight; and hold thy life in thee for fifteen short minutes more, old Zulu war dog, and ye shall both live forever in the annals of the land.

On, clattering through the sleeping streets. We are passing the Flower Temple now—one mile more, only one little mile—hold on, keep your life in ye, see the houses run past of themselves. Up, good horse, up, there—but fifty yards now. Ah! you see your stables, and stagger on gallantly.

"Thank God, the palace at last!" and see, the first arrows of the dawn are striking on the temple's golden dome. But shall I get in here, or is the deed done and the way barred? Once more I give the password and shout "Open! open!"

No answer, and my heart grows very faint.

Again I call, and this time a single voice replies, and to my joy I recognize it as belonging to Kara, a fellow officer of Nylepta's guards, a man I know to be as honest as the light—indeed, the same whom Nylepta had sent to arrest Sorais on the day she fled to the temple.

"Is it thou, Kara?" I cry; "I am Macumazahn. Bid the guard let down the bridge and throw wide the gate. Quick, quick!"

Then followed a space that seemed to me endless; but at length the bridge fell and one half of the gate opened, and we got into the courtyard, where at last poor Daylight fell down beneath me, as I thought, dead. I struggled free, and leaning against a post looked around. Except Kara, there was nobody to be seen, and his look was wild, and his garments were all torn. He had opened the gate and let down the bridge alone, and was now getting them up and shut again (as, owing to a very ingenious arrangement of cranks and levers, one man could easily do, and indeed generally did do).

"Where are the guard?" I gasped, fearing his answer as I never feared anything before.

"I know not," he answered; "two hours ago, as I slept, was I seized and bound by the watch under me, and but now, this very moment, have I freed myself with my teeth. I fear, I greatly fear, that we are betrayed."

(To Be Continued.)

In any case of seminal weakness, arising from any cause. Dujardin's Life Essence is a sure cure. It acts very quickly, and permanently cures. Two or three bottles have been often sufficient to cure even cases of long standing. Price, $1.50 a bottle. All druggists.

### INDIGESTION OR DYSPEPSIA

Is the inability of the stomach to dissolve the nutritive element of the food. In such cases the food acts as an irritant, producing pain and distress, and if unchecked, leading to constipation and piles. It requires usually but slight treatment to effect a perfect cure. Hamburg Figs are mild in action, assisting nature, and never failing to effect a complete cure of very bad cases of dyspepsia, as the Figs at once causes the stomach and intestines to secret fluids which are normal in character. Hamburg Figs are sold at 25 cents a box everywhere. Dose, one Fig.

### THE HAIR OF SAVAGES.

**How the Asiatics and South Sea Islanders Keep It Within Bounds.**

The Asiatics have always been famous for decorating their heads. The Mohammedans of old shaved their heads, except a single knot of hair at the exact top of the head, which was left for a practical purpose, the Mohammedan doctrine being that at the resurrection of the dead the angel Gabriel was specially detailed to attend to the Mohammedans, and he raised them by the top-knot. Accordingly the top-knot was left full and strong in order that the hold might not break, a hole being left in the top of the coffin in order to facilitate the angel's work. The Chinese method of hair dressing is too well known to need description, while in India the styles are both numerous and diversified, many of the tribes of the Punjab being distinguished from each other by their methods of dressing their hair.

According to Lubbock, Darwin and other authorities, the head dressing of the South Sea Islanders is ornate in the last degree, while not infrequently their styles of dressing their hair are so ingeniously grotesque as to create the impression that the arrangement was solely for the purpose of creating laughter. Sometimes most of the hair on the head is clipped away, leaving a number of short, round tufts, as though the scalp were planted with short paint brushes. Occasionally the hair is cut away from the forehead and temples, leaving it at the top and back of the head; sometimes the back of the head is shaved, leaving the hair on the top and sides; but generally the entire growth of hair is left upon the head, and as the capillary adornments of the New Zealanders are very long and bushy, the coiffure of a chief generally assumes enormous proportions. One traveler mentions the fact of seeing a chief in New Zealand whose head dress was over three feet in diameter and arranged in long cones, the surface of the scalp being divided into a great number of small circles, and the hair growing in each twisted up and so curled as to form inverted cones, the point being toward the scalp.

But, not content with these extraordinary appendages, the South Sea Islanders have a practice of dyeing their hair and in the most extraordinary colors. The natural color of their hair is a jetty black, but they have a number of pigments, the use of which is well known to them, by which they color their locks red, green, blue, yellow and white, and every variety of color may be seen in the course of a day's walk. But the New Zealand dandy is frequently not satisfied with having his hair one color, and so will die it in several, making bands or stripes across his cranium. A recent traveler records having seen a New Zealander with an enormous shock of bushy hair. In front the hair was left its natural color. Next, from ear across the top of the head to the other, came a strip of white hair, then a band of red, then a streak of green, then a blue stripe, and this parti-colored savage, who resembled nothing so much as an extraordinary habited clown in the circus, was not only the admiration of himself, but of the entire village in which he lived, so that in New Zealand, as well as in more civilized countries, the adage: "Variety is the spice of life," is perfectly true.—

THE LOG CABINS of America have been birthplaces of some of the grandest men. Lincoln, Grant, Sheridan, first saw the light of day through the chinks of a Log Cabin. Warner's Log Cabin Sarsaparilla also originated in a Log Cabin and stands pre-eminent among the blood purifiers of to-day as Warner's "Tippecanoe" does as a stomach tonic.

The plumber came down like a wolf on the fold,
And his pockets were laden with solder and gold;
Nine hours and a half he made love to the cook,
And sixty-five dollars was charged on his book.

### IMITATORS AND IMPOSTORS.

The unequalled success of ALLCOCK'S POROUS PLASTERS as an external remedy has stimulated unscrupulous parties to put forth imitations, which they endeavor to sell on the reputation of ALLCOCK'S. It is an absurdity to speak of them in the same category as the genuine and original porous plaster. Their pretentions are unfounded, their vaunted merit unsupported by facts, their alledged superiority to or equality with Allcock's a false pretense. The ablest medical practitioners and chimists and thousands of grateful patients unite in declaring ALLCOCK'S POROUS PLASTERS the best external remedy known.

Minneapolis has decided to build an art school. We suppose the specialty taught will be flour painting.

### BETTER THAN A HERO.

"What a coward that Major Smith is," said Jones to Robinson, "why, the very sight of gun-powder would make him ill. How did he ever manage to become an officer in the army?" "Don't say anything against Smith," answered Robinson, "he once saved my life." "Saved your life! Nonsense, impossible! What do you mean?" "I mean that I was in the first stages of consumption; I was losing strength and vitality every day, with the terrible disease, when Smith advised me to take Dr. Pierce's Golden Medical Discovery. I had tried all kinds of medicines without success, and my physician had given me no hope; yet here I am, as well as ever a man was, and I owe my life to Smith, and the wonderful remedy he recommends."

The secrets of much success in this world are cash, confidence, cheerfulness and constancy.

Hotel Clerk (angrily)—Why didn't you answer when I first rung for you? Bell Boy (with a grin)—Please, sir, I slippled upon the bell peal.

### PRUDENCE! PRUDENCE!

In medication, as in aught else, prudence should be our guide. Yet thousands cast it to the winds. Every new nostrum finds its patrons, the medical empirics of every false school have their gulls. Every change in the gamut of humbug is rung successfully—for a time at least—the notes being furnished by the credulous. In happy contrast to the many advertised impostures of the day stands Hostetter's Stomach Bitters, now in its third decade of popularity, approved and recommended by physicians, indorsed by the press of many lands, sought and prized by invalids everywhere. It is an ascertained specific for and preventive of malarial diseases, chronic indigestion, liver complaint and constipation, checks the growth of rheumatism and neuralgia, is a peerless invigorant and useful diuretic. Nervous people benefit by it.

Husband (a bow-legged man, at Saratoga)—Shall we ride or walk, my dear? Wife—We will ride, John, love, you look better in a carriage.

White Elephant of Siam, Lion of England, Dragon of China, Cross of Switzerland, Banner of Persia, Crescent of Egypt, Double Eagle of Russia, Star of Chili, The Circle of Japan, Harp of Erin.

To get these buy a box of the genuine DR. C. MCLANE'S CELEBRATED LIVER PILLS, price 25 cents, and mail us the outside wrapper with your address, plainly written, and 4 cents in stamps. We will then mail you the above list with an elegant package of oleographic and chromatic cards. Fleming Bros., Pittsburgh, Pa.

Condemned Criminal—Mr. Sheriff, will you see that my body is accorded a decent burial. Sheriff (coldly)—I'll see you hanged first.

### A YOUNG GIRL'S GRIEF

At seeing her charms of face and form departing, and her health imperiled by functional irregularities, at her critical period of life, was turned to joy and gratitude after a brief self-treatment with Dr. Pierce's Favorite Prescription. It purified and enriched her blood, gave a healthy activity to the kidneys, stomach, bowels, and other organs, and her return to robust health speedily followed. It is the only medicine for women, sold by druggists, *under a positive guarantee* from the manufacturers, that it will give satisfaction in every case, or money will be refunded. This guarantee has been printed on the bottle wrapper, and faithfully carried out for many years.

A female music teacher is often a woman of note.

AN ARTICLE OF TRUE MERIT,—"*Brown's Bronchial Troches*" are the most popular article in this country and Europe for Throat Diseases and Coughs, and this popularity is based upon real merit. *Sold only in boxes.*

France is on the west side of the Alps. Monaco is on the suicide.

### A WONDERFUL FOOD AND MEDICINE.

Known and used by Physicians all over the world. SCOTT'S EMULSION not only gives flesh and strength by virtue of its own nutritious properties, but creates an appetite for food that builds up the wasted body. "I have been using Scott's Emulsion for several years, and am pleased with its action. My patients say it is pleasant and palatable, and all grow stronger and gain flesh from the use of it. I use it in all cases of Wasting Diseases, and it is specially useful for children when nutrient medication is needed, as in Marasmus."—T. W. PIERCE, M. D., Knoxville, Ala.

S. F. N. U. Series No. 329.

### A NEW THING IN ART.

**Description of a Visit to Ottnat, Fish & Co.'s Studio.**

(From *S. F. Daily Examiner*, Sept. 27, 1888.)

A subscriber of the EXAMINER, who recently received a circular from Ottnat, Fish & Co., the well-known artists in the Phelan Building, writes to inquire whether the firm is doing a legitimate business and can be depended upon. In order that an intelligent reply might be made to the question, a reporter was detailed to visit the studio yesterday and to examine into the modus operandi of the firm. He was very much astonished, and agreeably so, at what he saw. The first apartment entered was the large and well lighted studio, on the walls of which were displayed a large number of crayon portraits, all life-size and drawn from photos. The work was in the best style of the portrait painter's art, and the frames were of the newest designs, bright and substantial as well as ornamental. Adjoining the studio is a large packing-room, where several workmen were busy in boxing the portraits and frames and marking them to their destination in all parts of the Pacific Coast. The reporter estimated that there was about a carload of frames in the room ready to be filled and packed. The next room was occupied by fifteen young ladies engaged in the multitudinous correspondence of the firm. This alone will give a faint idea of the wholesale nature of the business done by these go-ahead artists. The artists working studio is a very interesting spectacle. Here were seen twenty odd artists carefully copying and enlarging photographs, and it was almost marvelous to note their success in every instance in producing a faultless likeness, the exact expression of the subject being caught and faithfully transmitted to the canvas in every instance. He also learned that this is but a branch establishment of that of the same name in Chicago, where they have built up a large and constantly increasing business. This firm is the first to introduce this novel method of advertising their work in this city, and desire the public to note that they have no connection with any firm on this Coast. A large stack of complimentary letters from prominent business and professional men in this State was shown the reporter. They speak in the hightest terms of the excellence of the work sent to them. Send for circular.

PISO'S CURE FOR CONSUMPTION

A PROMINENT "WOOL" GROWER.

The above well-known "wool" grower has figured prominently in politics for the past 20 years, and his opinion is that "Seal of North Carolina" Plug Cut is the boss smoke and don't you forget it.

NOW IS THE TIME

To secure your Winter supply of Dry Fruit. The new crop is ready for market. It has been well handled, is fine and selling low. We are furnishing all classes of buyers, from carload lots to a Winter supply for family use, of anything in the Dry Fruit line at wholesale prices. From half a cent to one cent per pound above the cargo rate as paid producers is satisfactory profit to us. There are few, if any, houses here handling more Dry Fruit, and none a greater variety. We quote:

| | |
|---|---|
| Sun Dried Peaches | old 3c, new 5c, 6c, 7c |
| Peaches and evaporated | 8c, 10c, 12c |
| Pealed | old 6c, new 12½c, 15c, 20c |
| Pears | dark 3c, bright 6c, 8c, 10c |
| Apricots | 6c, 8c, 10c, 15c |
| Nectarines, very fine | 8c, 10c, 12½c |
| Plums, pits in | 3c, 4c, 5c |
| Plums, pitted | 8c, 10c |
| Prunes, all grades | 5c, 7c, 8c |
| Apples, sun dried | 5c, 6c, 7c |
| Apples, kiln | 7c, 8c, 10c |
| Raisins, common | 5c, 6c |
| Raisins, fine | 7½c, 10c |
| Blackberries | 14c, 15c |
| Currents | 8c, 10c |
| Cherries, pits in | 8c, 10c |
| Cherries, pitted | 25c, 30c |
| Dates | 5c, 10c |
| Figs, California | 4c, 5c, 6c |
| Grapes | 3c, 4c, 5c |

The lower price represents the cheaper grades, and quantity makes some difference. Raisins are usually 5, 10 and 20-pound boxes; other fruits, 10, 25 and 50-pound boxes, or as wanted. We are very careful to select as ordered. A full line of Canned Goods, Groceries, Hardware and other family supplies. A full price list printed each month. Sample copy sent free. Send us your address. Smith's Cash Store, No 418 Front Street, San Francisco, Cal.

The OLDEST MEDICINE in the WORLD is Probably Dr. Isaac Thompson's CELEBRATED EYE WATER
This article is a carefully prepared physician's prescription, and has been in constant use for nearly a century, and notwithstanding the many other preparations that have been introduced into the market, the sale of this article is constantly increasing. If the directions are followed it will never fail. We particularly invite the attention of physicians to its merits.

## THE PLAY-PRODUCER.

**A Man Who Plans and Directs the "Business" of a New Drama.**

The play-producer is much more than an ordinary stage manager. He stands for the time as the author, or at least as the expounder of his ideas, for, as a rule, the young dramatist is not an actor, and while he may know the results he desires, is ignorant of the processes by which they must be obtained. Many managers are unable, through the pressure of other business, to give their new plays or trial productions all the time necessary for proper superintendence, and are, therefore, glad to avail themselves of the services of the producer. More especially is this the case with spectacular plays, which require a long time in preparation, and in which there is an infinitude of work in drilling each department separately and finally getting them into a harmonious whole.

The manuscript of a new play is given to the producer many weeks in advance of the date fixed for its first presentation. He proceeds to read it over and over again till, with the assistance and explanation of the author, he becomes thoroughly imbued with the spirit, feeling and purport of the play. During this assimilating process he may see chances of improvement in the way of condensation, elaboration or alteration, and his suggestions in these directions are often of considerable value. When the producer is thoroughly familiar with the play he begins to plan the "business" or movements and actions of all the characters. This he proceeds to mark on his prompt copy, and though in rehearsals some modification of his preconceived ideas may be found necessary, the "business" will usually stand pretty nearly as at first arranged. This branch of stage art is of the utmost importance, as many plays of no striking merit are frequently rendered attractive by novel and ingenious bits of "business," which at once strike the spectator as natural and unconventional.

Having thoroughly grasped the scope of the action and the nature of the characters who are to exhibit it, the play-producer, in consultation with the author or manager, who is for the time his employer, proceeds to engage the cast. In the plays of to-day, fitness of appearance and natural temperament are more easily obtainable than considerable experience and trained ability, and, therefore, a great deal of judgment has to be used in selecting a company. In the old days, when actors and actresses could "play any thing," they were engaged on the merit of their reputation, and their appearance was not considered. The progress of realism has brought about a demand that actors should look their part. Like all reforms and innovations, this has not been an unmixed blessing. We often, nowadays, get the looks without the ability to act. Where the two qualifications are happily united, then eyes, ears and intellect are alike pleased.

At the time while he is planning his "business" the play-producer also makes out his "plots," or directions for scene-painters, carpenters, property men, gas and calcium men. If the new piece is to be a "heavy" one, with many new and elaborate scenes, his conferences with the scene-painter and carpenter will be frequent and long. Plans have to be drawn and models made and painted, and then accepted, modified, or rejected, as the case may be. Where pieces are only going to be tried for one performance scenery is seldom especially painted, and the taste and ingenuity of the producer and the carpenter are taxed in setting and combining old scenes so as to give them a newer, or at any rate less familiar appearance. In spectacular plays, costumers, armor-makers, wig-makers and all the host of tradesmen used have to be seen and constantly overlooked.

The rehearsals once begun the play-producer knows little rest until after the first presentation. On that occasion he "runs the stage"—sees that it is properly set, that the people have all their properties, and attends to the ringing up and down of the curtain. After the first performance his labors generally end, though if alterations or cuts are found necessary, he attends to those the following day. The play-producer's duties are arduous and responsible, and constant occupation is not to be relied upon. Under these circumstances it is only reasonable that his remuneration, when employed, should be liberal. He rarely gets much credit from the public, and only a few of the critics, who thoroughly know all the details and difficulties of stage preparation, think it necessary to give him a word of commendation. —*N. Y. Tribune.*

—"Cozey Bell," a handsome female Skye-terrier, had been the household pet of a wealthy New York lady for ten years. Recently "Cozey" died of cardiac failure, as her physician was pleased to call it. Her sorrowing mistress purchased a Woodlawn Cemetery lot, ordered a velvet-covered, satin-lined burial casket, had an engraved silver plate put upon it, stating the name and age of the deceased, and, accompanied by sympathetic friends, followed "Cozey's" remains to their final resting-place.

—A new target, which indicates the value of the last shot without the necessity of a marker, has been brought out. When the shot strikes a colored disc appears, which tells the value by its color. The target has been tried successfully at in-door practice, and it is hoped that a trial at long range will be afforded the inventor.

## TRIUMPHS OF TRADE.

**How the Sea Has Been Subjected to the Uses of Man.**

The sea was to primitive man a dreadful and a little known wilderness. It seemed to disjoin men, to hinder trade, to coop up the human race. To-day it is the "ring of marriage with all nations." As upon the great deserts merchants traveled in caravans for safety and counsel, so they at first traveled upon the sea in fleets, as soon as individual explorers had led the way and commerce had any sort of organization. Men were too timid to venture alone with their goods.

The picturesque element was undoubted. Take Venice as a type not too remote in time for the modern mind. A green sea laves the foot of its white quays and palaces. Red robed officials stand at the top of the quay steps and the doors of mansions and on the Rialto. The public square is alive with the sound of fifes and trumpets and processions of archers, mariners and dignitaries pass along. Venetian beauties smile on the young patricians who are about to leave home for a long journey. The air is heavy with flags and pennants; it is a public holiday, for the fleet is going eastward on its annual journey, and going in a body, under a Commodore elected by the Grand Council, who has his own train of music men, his black-robed physicians, his pilots, scribes and craftsmen bearing their tools. Each ship has been chartered by public auction, and is directed by a patrician. The fleet, with the blessing of the Doge and the good wishes—alas! also the tears—of the people, will slowly make its way eastward, and when it has bought cargoes of silks, camlets, carpets, Persian shawls and spices, sent by caravan to the Syrian ports and to Egypt, it will curve back toward the mouth of the Mediterranean, distributing its riches as it goes, and shipping others, until it has reached Portugal and can creep along to Antwerp, the center of Western trade, and thence to the Thames, to assemble in state at Southampton for the homeward voyage, laden with English kerseys and cloths.

Continental wine fleets came to England in this way in the early time. Tossed into disorder, they reached the Thames, and when they reached the New Weir, the city boundary, they dressed up, raised their ensigns and then came up to London Bridge, the marines singing all the way with lusty voices, their kiriele, or song of thanksgiving and deliverance. Many Englishmen, in their river craft and from their overhung doorways and dormer windows, used to think these foreigners made a needless fuss about a little toss on the German ocean or a hustle in the chops of the channel; but then, as now, they had a wicked wit for men in strange garb, over curious in their eating and drinking and quick in speech.—*Cassell's Family Magazine.*

## SPAIN'S POSTAL SERVICE.

**A Country Where Post-Offices Are Conducted in a Peculiar Way.**

You can not get a stamp at a Spanish post-office for love or money. You get it at the nearest cigar store, where also you find a letter-box, and nowhere else except at the post-office. A strange story was told me by an English chaplain at Malaga. Casually strolling into the cafe one day, he noticed a number of letters stuck up on the wall, and to his supreme astonishment found that several of them were for him. On investigating the matter he discovered that a postal clerk had entered into an arrangement with the cafetier to send him letters addressed to foreigners, the understanding being that the latter would probably pay him a fee for his trouble, or, at any rate, frequent the cafe! The chaplain referred the matter to the Consul, and the little game was stopped. Among the letters in the cafe were several addressed to parties, known to the chaplain, who had left weeks before. The moral would seem to be, don't address your letters poste restante, but send them to the Consul or the broker named in your letter of credit.

Registered letters appear to be safe, on the other hand, but the extraordinary precautions taken to make them safe appear like an accusation of general dishonesty. If you receive a registered letter you have to return the envelope with the signature of your receipt. This is simple enough. The difficulty lies in knowing how to send off a registered letter. I shall never forget my first experience in that line. When I handed in my letter it was returned with the remark that it must be sealed. I took it to a cigar store and had a seal put on it, but again it was handed back. "There must be five seals," said the clerk. Not wishing to expose my ignorance to the black-eyed beauty in the cigar store, I went to a stationer's and bought a bar of sealing-wax, but having no stamp used a coin instead. Once more the letter was returned: "The stamps on the sealing-wax must be all the same." In despair I took it back to the black-eyed girl and explained my difficulties. She put on the five seals, and then at last the letter was accepted. The most absurd part of the whole story is that although Seville swarms with foreigners in spring, there are no directions regarding the matter posted up anywhere. Indeed, not even the time (three or four hours a day) when the post-office is open is announced at the window. Obviously, the Spaniards are not much in need of postal facilities, and for a good reason, since not much more than twenty-five per cent. of the population can write and read.—*Seville Cor. N. Y. Post.*

## THE "BACK SHOP."

**A Chicago Institution in Which Every Man Is His Own Tailor.**

On of the queerest institutions in the tailoring trade in Chicago is the "back shop," about which one begins to hear almost as soon as one makes any inquiries into Chicago tailoring. "Most of the work is done either at home or in a 'back shop,'" is the customary statement. "What is a back shop?" demands the investigator, whereupon he is usually told that it is an institution that must be seen to be appreciated, and he goes to work and sees it and appreciates it.

The "back shop" is a place where for a dollar or two a week a tailor may rent a seat upon a broad table, with the privilege of using irons off the common stove. It is a large shop where every body is his own shopkeeper. One of the largest of these "back shops" is on the northeast corner of Fifth avenue and Madison street, on the top floor. A reporter climbed up beyond the sundry stories until he reached the top, where he found himself in a long, well-lighted, but rather low-ceiled room, which stretched the full length and breadth of the building. Close to the windows all about the room was a collection of broad tables, upon which a number of men were squatting after the bone-breaking manner in which tailors rest themselves and work. A few women were grouped together in one corner of the apartment, and in the middle two stoves, heated like the fiery furnace in the old testament, were keeping the irons of the establishment warm. There was little talking but a great deal of work, and as soon as the reporter had found Mr. Braybrook, the proprietor of the enterprise, nobody paid any attention to him save the person with whom he was talking.

"Yes," Mr. Braybrook said, "this is what is called a back shop, where tailors are provided with a place to do their work and hot irons are furnished for a fixed charge per week. You see, in most of the tailor stores about town there is no place for the men, and so they come to places like this. There are quite a number in Chicago. I simply rent a man his seat and see that he has all the irons he wants and that ends my duties in the premises."

"What do you charge them?"

"One dollar a week—or if two men who are partners work together—$1.50 for the two. Seamstresses we make room for at 75 cents apiece."

"And how many men usually take advantage of the scheme?"

"It depends on the season and the amount of work. There are usually about forty or fifty here."

"Of course, you have nothing to do with the time they work?"

"Oh no, certainly not. They rent their seats, and that is the end of it as far as I am concerned."

"How about shop discipline? Have you any rules which your renters must observe?"

"No. If a man makes himself disagreeable to the other workmen, of course I get rid of him as soon as I can and will not let him back into the shop—but that seldom happens. You see, tailors, as a rule, are very decent men, and they know how to take care of themselves and do their work. Under any circumstances it would be none of my business. As long as nobody does any thing to interfere with the others I have nothing to say."

"What is the reason, Mr. Braybrook," said the reporter finally, as he cast a glance about the room, "that the tailors sit on the tables and curl themselves up like that man yonder," and a workman in an acutely uncomfortable position was pointed out, "instead of sitting on chairs?"

"Because it is the most comfortable position for the work. A tailor gets supple-jointed after a time, and he can do the most extraordinary things with his legs. These positions don't look restful to you, but they are."

"What do these tailors make?"

"That depends. Some of them can sit down and make $25 a week; others run less. They can average $15 a week without working too hard."

"Do they have to make a deposit when they take goods away from the shop?"

"No. The stuff is given to them all cut and prepared, and no tailor is asked for a deposit. It is not needed. I never heard of but one case in Chicago where a man made off with the cloth and material given him to make up."—*Chicago News.*

### A Desperate Individual.

"Papa," said a pale but beautiful girl, "I refused Mr. Sampson last night, and as he went to go he said:

"'Miss Millinton, your refusal has made me desperate; all the colors of my life are changed; look in the papers to-morrow morning,' and, with a groan, he was gone. Oh, papa, see what dreadful thing has happened."

"Was his first name George?" asked the old man, scanning the paper.

"Yes, papa."

"H-m—George Sampson. Yes, he has been sent up for ten days."

"Sir," he said to the old man, "for months I have worshipped your daughter with a mad passion, which I had every reason to suppose was reciprocated."

"Well?"

"Last night she cruelly refused me, and, in the depth of my despair, I overestimated my capacity, and this morning was fined ten dollars."

"Well?"

"I think, sir, that in view of all the existing circumstances, it would be no more than right for you to reimburse me the fine."—*N. Y. Sun.*

## THE AMERICAN TAR

**How the Yankee Skippers of the Past Generation Looked and Acted.**

Ah, who can not but love them all!—these skippers bold, who have cruised in all known and unknown waters; who, as their fireside fiction relates, with painted ports and monstrous guns, hastily constructed out of deck-pails and "skids," and mounted grimly on the "fo'castle" deck, gave violent chase to hovering buccanneers in the Spanish Main, and would have captured and eaten them, too, if the wind had not "canted" just as the overawed pirate was striking his black flag; who would never think of going a-sleighing through the soughing Maine pines without a patent ship's log dragging in the snow to show how many miles their nags were making, who make fast a compass and binacle lamp underneath the seats of their road wagons; who still prefer salt beef and cod's tongues to the most savory of shore viands; who have taught their Brazilian parrots to call all their neighbors "land lubbers;" who now and then, in an ecstacy of resentment at all things of the land, yell to their cooks: "Bake me a pan of iron-bound biscuit that'll crack and span like gafftopsa'l sheet blocks!" who keep their old ship's chronometers by their "bunks" and never wake suddenly from an after-dinner doze without singing out: "Mate!—how's she headin'?" who can not, as they declare, sleep comfortably of nights unless some body is put "on watch" to dash water against their houses under the windows, as though the sea were pounding at their ship's sides; who, in their dreams, rail at passing barks and brigs with fine and bitter irony, as they bellow forth:

Main boom! top-an-litt!
Davy lift a fall!
Jip-sheet! tail-rope!
Let go the haul!

And who at all times, providing you can demonstrate becoming reverence, though they are always suspicious of the integrity of your decorum, will spin you such yarns as will make you know that the ocean of to-day is but a mean sort of mill-pond beside the majestic sea of their time; and under the magic of their mighty sweeps of imagination make your heart ache with longing for the fertility of their genius.—*Edgar L. Wakeman, in Chicago Inter-Ocean.*

## EASY INTIMACIES.

**Why They Are to Be Avoided by Young as Well as Old Persons.**

A writer in a London paper discourses about the danger of easy "intimacies" that is, of giving the confidence to the people of whom one knows nothing except that they are pleasant companions when they are met socially. "The danger lies," he says, "in the facility with which companionship of this kind is mistaken for true intimacy, though it does not really imply any thing approaching to it." A woman "will trust her life to the keeping of a man, of whose aims, of whose standard of right and wrong, of whose power of habit of giving up to the standard she knows just as much and just as little as she does of the actors whom she has seen on the stage, though she is deceived into thinking she knows more, only because she happens in this case to have been one of the actors and not merely a passive spectator." There is more truth than poetry in this thought, for in nine cases out of ten the two persons who come together in marriage have no more conception each of the other's true character and real disposition than of those of a dozen others in their circle of acquaintance. They are simply pleasant, social companions, and that is all. There are quite as many mistakes made in friendship through these "easy intimacies," though the consequences are not as far-reaching. Women, especially, are apt to give their confidence to those with whom they have been familiarly associated when they never proved their trustworthiness. It is one thing to have pleasant little familiar conversations about every day matters; it is another to impart what perhaps touches the inner life, and which made light of, or misrepresented, would place one in an uncomfortable position, or possibly even worse, injure the reputation or put it in the gossip's hands to do with as they please. A real friend, a true friend, one who can be trusted to enter the holy of holies of your heart without desecrating it, is among the best gifts that life can offer, but they are found in small numbers and are only proved by trial. A certain amount of reserve, even with familiar companions, is a good thing to employ, for it gives not only a sense of safety, but of security.—*Toledo Blade.*

### Not Much of Him Left.

In surgical circles here a successful operation performed by Prof. Billroth at the Vienna Klinik is much commented on. While a carrier was driving his team to town last winter his legs, fingers, ears and nose were frozen. At the time his life was despaired of. Both his legs had to be cut off, and only one finger on each hand could be saved. His nose was replaced by an artificial one, and his ears were clipped. He bore his sufferings with remarkable composure, and, having been supplied with artificial legs and feet, he can now get about with the help of two simple sticks. It is surprising that with one finger he is able to write well.—*Vienna Letter.*

—It makes a vast difference with ourselves, as well as with our impressions of the world, whether we are thankful for the roses we find on thorns or complain about the thorns we find among roses.—*Hartford Religious Herald.*

## LIGHTNING WAS NOWHERE.

**How an Engineer Got Ahead of a Thunderbolt.**

"What was the fastest time you ever made?" asked The Talker of Johnnie Byers, one of the best known engineers in the western country.

"Well," he returned, "I reckon a run of forty miles I made on the North Platte end of the division was the slickest. You see, I was sent out from Omaha with a light engine to pull in a special director's car from North Platte, and when I got within about fifty miles of the latter station I was given an order to run regardless of everything—other trains were side tracked for me.

"I hadn't left the station more'n five minutes before a heavy thunderstorm came up—they do it awful quick out there—and me and my fireman enjoyed the finest display of fireworks you ever see.

"All of a sudden Tom yells to me:

"'Holy Moses! The lightning's struck the track! Pull out, Johnnie, or we're done for!'

"I looked back, and sure enough there came a streak of lightning along the right rail headed for us. It was a kinder whitish blue sort of thing, and was humping along like it had a time order.

"I knew that if it struck the machine we was all gone to the sweet hereafter, and I pulled her wide open.

"Well, the old machine seemed to know something was up, and she gave a jump like a scared antelope and off ahead of that lightning streak. At first the streak seemed to be gaining on us, but after the engine got good and started, my, you ought to see the distance play out between us. But the lightning didn't seem to be discouraged. It just spit on its hands and clawed along after us like a promissory note after an insolvent debtor.

"Well, I seen something must be done, but couldn't make out how to do it. It was plain that if this thing kept up much longer the water and coal would give out, not to speak of red hot journals. I says to Tom:

"'Heave away, now, with the coal and we'll fool him,' and, although he'd been heaving away since the start of the race, that seemed to help, for I could see the lightning was lagging. Then I turned the machine over to him and crawled back on the tank. I had an idea. There was a siding a few miles ahead, and if we could make it—well, you'll see. There was a broken drawbar on the tank, and when I reckoned we'd got about the right distance I dropped it. I could see it rolling along for quite a distance, then I got back to the engine and slacked up.

"All of a sudden I heard the most outlandish racket you ever heard of behind us. Then the air was full of splinters, and when I rolled back, sure enough the drawbar had fallen in the switch I'd calculated on hitting, and had made such a connection with the main track that the lightning had been switched off and had run down on the siding and into two cars of powder standing there. I'm sorry I can't give you the exact time of that run, but under the circumstances you couldn't expect a man to hold a watch, now could you?"—Omaha Herald.

### Not for Intrusive Eyes.

"As you can only be a sister to me," he said, in broken tones, "will you let me kiss you good night?"

She shyly said she would.

Then he folded her in his strong arms and gently placing her head against his manly breast, he kissed her passionately.

"Mr. Sampson," she said softly, "this is all so new to me, so—so different from what I thought it to be, that if you will give me a little time to—to think it over, I—I may"——

But let us withdraw from the sacred scene. —New York Sun.

### Something Serious.

Guest—Lightning struck our hotel this morning.

Friend—Nothing serious, I hope?

Guest—Yes, quite so.

Friend—Indeed, how was it?

Guest—Routed me out an hour earlier than usual for breakfast.—Chicago Tribune

### The Inventor of Volapuk.

"Volapuk, they say, is a sort of a jumble of all other languages."

"So I believe."

"Who invented it, I wonder?"

"A restaurant waiter, probably."—Lincoln Journal.

### Careful of the Book.

Young Author (making a call)—I see you have my new book on the table, Miss Hammersly?

Miss Hammersly—Oh, yes, Mr. Preface, and we have found it so interesting.

Young Author (taking the book)—I notice some of the leaves are not cut.

Miss Hammersly—Er—no, Mr. Preface; we are careful to keep it fresh as long as possible.—New York Sun.

### Popularity Variable.

Citizen—That Johnny Ward is the dandy of 'em all. He outranks every player in the League.

Another Citizen—I heard you say yesterday that he was not worth the powder to blow him up.

Citizen—Yes; but you should have seen the stop he made today.—The Epoch.

### Not to Be Expected.

A child has been sent to congratulate his grandmother on her birthday. "Grandmamma!" he exclaims, "may you live until the end of your days!" "Alas!" replies the old woman resignedly, "at my age, I can scarcely expect to live as long as that."—Etats Unis.

### Not for Reading.

"You have plenty of reading there," said a visitor to the literary editor, pointing to a pile of books on the editorial desk.

"They are not for reading," answered the literary editor, "they are for reviewing."—Boston Courier.

### Didn't Enjoy the Trip.

"How did you enjoy your trip abroad?" was asked of a New Yorker.

"Beastly stupid time. I didn't see a single baseball game while I was gone."—Judge.

### Self Defensive Advice.

McPheet—Hav yez a match, Dinnis?

Corrigan—Oi hov!

McPheet—Wull, thin, light both ends o' thot cigyar so's it won't lasht so long!—Judge.

## LEARNING TO SWIM.

**The Discouraging Aquatic Experiences of a New York Humorist.**

Once upon a time, when I was young and full of unlimited confidence in the future, I made up my mind that I would learn to swim. Every one told me I ought to learn the noble art of how to keep your head above water, and I became filled with a sort of enthusiastic longing to go and float on my back, out into the mystic East, where the crested seas play leap-frog through the never-dying years.

I inquired what was the best way to learn to swim. I received 1,471 different replies. It was just a trifle confusing. I was not quite sure which was the best way, so I concluded to begin at the beginning of the list and work my way through to victory or a watery grave.

The first method recommended to me was to strip and boldly plunge into the water where it was over my head. "The natural instinct of the animal," said my adviser, "is to swim. You need nothing but the firm resolve, and you will find it exceedingly easy. Jump right in and strike out, and you will get there."

The more I thought about it, the more this seemed to me to be good advice. So one day, when I was crossing the North river on a ferry-boat, I just shut my eyes and jumped overboard. I struck out boldly; and as my adviser had predicted, I got there. I got right to the bottom. As soon as possible I got back again to the surface, and was just about to strike out boldly once more, when a miserable pirate jammed a boat-hook under my collar, and yanked me out of the water with an exceeding great yank.

I was arrested and taken to a police court. I explained to the police justice that I had jumped overboard to earn to swim; but he sent me up, just the same.

When my term was at an end, I thought I would try the plan of the second adviser. This was to practice the stroke in shallow water until I knew how to use my hands and feet, and then to venture into water deep enough to swim.

I went down to the river one evening where some boys were in swimming, and said:

"How deep is the water here?"

"Only two feet and a half," said one of the boys, who was paddling about.

That suited me, so in I went. I practiced away at the stroke, and was doing beautifully, when it occurred to me that the sand on the bottom was scratching my breast. So I said:

"Isn't there any deeper water than this around here?"

"Right over there," said a boy pointing. I went "right over there," and at once disappeared from view. When I came to the surface I was going to swim splendidly; but two boys jumped in and towed me ashore. Once more I had been rescued.

Then I tried another plan. This was to take a lot of corks and put them under my arms, and swim that way until I had the stroke down fine; then to cast away the corks and go it alone. Well, I procured my corks, and started out through the surf at Coney Island. It was really very pleasant, riding the breakers and feeling as if one were suspended in the air. When beyond the ropes I found I was swimming beautifully, so I threw off my corks and struck out boldly. Of course, the first shock of throwing away the corks sent me downward, and it was so deep that I was a long time coming up. When I did come up, I was just going to swim away in great style, when a man came up in a boat, grabbed me by the neck, and dragged me in. I tried to explain my design to him; but he intimated that he thought me a crank.

And so it has been. Every time I have tried to learn to swim, some one has come along and rescued me. I don't want to be rescued. I want to swim. But they will not let me. They always say: "My dear sir, in two minutes more you would have been drowned." So I have given up all hope of ever learning to swim, and am going to wade slowly through the rest of a sorrowful existence.—*Puck.*

## COLORS FOR AUTUMN.

**New Shades of Green, Red and Gray Most Favored by Fashion.**

Green, red and gray are the trio of absolute colors most favored by fashion for autumn, but it is not so easy to state which shade or even which of the combinations will achieve most popularity. Every shade of green flourishes, from the vivid, rich *emeraude*—a deep emerald green—to *Nil*, or Nile green, a light water-color. Scarabee is a dark yellowish green, and *couroucou* and *peuplier* are lighter shades of the same color.

The brighter reds are *coquelicot*, or poppy-red, cardinal and Boulanger, a bright, vivid blood-red; and the eye has become so accustomed to these glowing colors in the stylish costumes worn at the sea-side and other summer resorts, that the combination must be startling, indeed, that will dazzle.

*Bouton d'or*, or buttercup yellow, of the beautiful golden tint of those well-known field-flowers, and maize color are exquisite in soft silken fabrics, and will very likely be combined with white, black, or deep browns for rich evening toilets in silk materials.

The new shades of brown are *alezan*, a dark reddish brown, and *poctole*, a light, golden brown; and between these is a symphony of shades in every conceivable tint that could by any stretch of imagination be called brown.

In blues, ocean-blue and *luciole*, the latter a shade between *gendarme* and ocean, are the favorites.—*Demorest's Monthly.*

## FLEECING AMERICANS.

**Some of the Tricks Which Parisians Play on Helpless Victims.**

The fact is that Americans who come to Paris and don't know the ropes do get most mercilessly swindled. Fully 50 per cent. of the large sums spent by Americans in this city brings no return in value of any sort or kind. Many leave Paris indignantly and vow never to set foot in it again. They set Paris down as a "regular fraud." This is a pity, because it is hard lines on a man who comes to a city for a change and a holiday to be sent away with his temper spoiled, and all the more so that with a little precaution he could easily avoid the harpies who infest Paris, perhaps, more than any other continental city, including Naples.

Much good money is wasted on guides and couriers. The regulation fee for the services of these is $2 a day and a meal. Very few, however, content themselves with such a salary. It is to the extras that they look for their profits. Thus it is very usual at meal times for the courier to take his client to an expensive restaurant. His client can't speak French, wants to sample French cookery and bids his guide order. The guide orders every thing that he likes and what is most expensive. If the client has not the same tastes as he, so much the worse for him. When the bill has been paid the courier pockets the document and will call in the evening to get 20 per cent. commission.

The American I refer to had in this way been taken to all the best restaurants in Paris, and had spent on himself and his guide what would suffice to keep a French peasant and his family for a year. At one house, which is noted for its good cookery and the moderateness of its prices, he had paid $107 for a breakfast which he had been unable to eat. Elsewhere he had spent $40 on a dinner, which he valued at 75 cents.

To convince him that one can dine well and cheaply in Paris, I took him to a restaurant I frequent, consulted his tastes, and gave him a dinner which cost me for the two of us just $1.40. He said he had not dined so well since he had been in Paris.

There is absolutely no necessity to take one's guide to lunch or dinner, and if visitors would remember this they would save much money and fare very much better. In every good restaurant in Paris there are waiters who can speak English to translate the items on the bill of fare.

Much annoyance would also be saved to visitors who dine at the restaurants if they would avoid visiting houses where the prices of dishes are not marked on the bills of fare. At such houses the amount of the bill depends on the appearance of squeezeability or otherwise of the customer. The very celebrated houses should be strictly avoided by the American visitor, unless he is accompanied by a habitue. Barring the pleasure of a tickled vanity, there is scant profit in paying $50 for a dinner barely worth $5.

It should also be remembered that prices of dishes are for quantities sufficient for two persons at all the better restaurants.

Items not marked on the bill of fare which may be offered by the waiters should be left untouched. Two or three prawns on a plate, a few olives on another and such kickshaws, will, if touched, bring the bill up 25 per cent. Waiters are in the habit of putting these on the table without being ordered to do so.

In the matter of change visitors should be very careful. Certain moneys which have no legal currency in France are invariably at certain establishments offered to foreigners in change for good money. It should be noted that the only moneys current in France besides French coins are those of Italy, Greece, Switzerland and Belgium. Russian and Austrian gold is also currency. Roumanian, Spanish and South American coins should invariably be refused. They can only be disposed of at a loss of 20 per cent. The coins of the late Papal States can be passed at nominal value, but should be avoided if possible.

In ordering goods made to measure, such as ladies' or gentlemen's clothes, a written contract should be made, otherwise the amount charged will very probably be doubled on the bill. The tradesman, if payment is refused, has the right to prevent him from leaving Paris. Tickets for theaters should never be bought at any of the theatrical agencies in the city. These charge about double the right prices. Visitors can always procure tickets at the booking offices of the theaters in advance.

These are a few indications of how to avoid being swindled in Paris, and if people would observe them one would hear less complaints from visitors. Their is no city, perhaps, in the world where so much pleasure can be got for as little money as in Paris, but in no city either is the systematic swindling of foreigners, and especially of Americans, more extensively carried out.—*R. H. Sherard, in N. Y. World.*

### A Lesson in Grammar

Teacher—Johnny, is the sentence "He sells me a watermelon," correct? Or should the form be: "He sells a watermelon to me?"

Johnny (who has had some practical experience)—It depends on the melon. If it's ripe he sells the melon. If it's green he sells me, Mr. Hoskinson.—*Chicago Tribune.*

—A beer garden is a place where the wild thyme grows.—*Binghamton Republican*

# INYO INDEPENDENT.

County Official Paper.

C. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY SATURDAY.

INDEPENDENCE, CAL

SATURDAY NOVEMBER 17..... 1883

In the history of crime it would be difficult to find a parallel for the series of dreadful murders recently committed in London. In the heart of the Capital of England nine women have been butchered and their bodies mangled in the most barbarous way. All these awful crimes have evidently been committed by the same person. The police of London have been considered as among the shrewdest and most skilful in the world; yet these terrible crimes go on and not a trace of the murderer is found He appears to regard the police with contempt, and all the world agrees with him. These undetected crimes show how stupid the police are, and prove that all their ancied ability rests upon nothing but boundless self conceit, like a great many other pretenses made in England to superiority. Such a series of murders could not be committed in any city in America without the police discovering the murderer. The English Parliament and the great officers of State appear to be paralyzed by these crimes and don't know what to do. They had better get a few American detectives to hunt down the murderer and bring him to justice.

The Republicans who opposed the candidate of their party four years ago have all returned to the fold and resumed their allegiance. They found that no matter how much there might be in their own party that was not satisfactory to them; it was far worse to give their support in breaking down the system of protection to American labor, and reducing the working people of their own country to the poverty and wretchedness everywhere prevalent among the working people of Europe. In England labor is better paid than in any other European country; and yet if Americans who have never been out of their own country could see the condition of working people in England, they would be filled with amazement, pity and disgust. We have reason to thank God that there is enough wisdom and patriotism among our own people to defeat all attempts to "put American laborers on the same footing with the laborers of other countries," as was declared to be their purpose by the supporters of the free trade policy.

The vote of New York carries a most important lesson with it. Hill, the Democratic candidate for Governor is elected by a majority reported at fifteen thousand. The majority for Harrison is reported to be not less than twelve thousand. The difference of twenty-seven thousand votes is due entirely to the free trade policy of Mr. Cleveland. It is very clear that the working men of the country will not sacrifice their own interests for party success. New York is to-day a Democratic State; and if the party leaders shall be wise enough to drop the free trade heresy, and fall into line on the patriotic policy of Samuel J. Randall, the State will give her vote for the next Democratic candidate for the Presidency. Free trade is as dead as the doctrine of the right of secession, and only pig-headed obstinacy will persist in a policy that can never win. Tens of thousands of as ardent Democrats as live voted against Cleveland for the only reason that he advocated free trade.

It is well worthy of serious consideration by politicians, that the majorities that elected Harrison President were given by the farmers and the great body of the people outside of the large cities. It is conceded by all that there is vastly more corruption and venality in politics in the cities than in the country. It is to those who are regarded as the best citizens; the sober, moral, industrious, intelligent, farmers and mechanics of the country that Harrison owes his election; and with these men the only consideration in the election was the preservation of American industries from destruction by free trade. Mere party names or catch words no longer count with the great body of voters; they know their own interests and will support or desert any party, no matter by what name it may be called, that sets itself in opposition to those interests.

The ALTA says it was a great mistake to nominate Thurman for Vice-President, and alleges this had a good deal to do with the defeat of Cleveland. Now this is very unkind; when the nomination was made the tail was declared to be much bigger than the dog. Thurman, it was confidently declared, would ensure the re-election of Cleveland.

## WHAT IS LITERARY MERIT?

**What Is the Agreed Upon Standard?—Intrinsic Literary Worth.**

What constitutes "literary merit?" Each editor thinks he knows. So does each literary critic. So do the people who will tell you that the poems or essays or books that live are possessed of it. There is a sort of agreed upon standard, known in a vague way by literary people and represented by our best periodicals. By all means keep this standard high, and keep yourselves up to the standard; but at the same time, once in a while, let your mind dwell upon the lesson contained in the parable of the widow's mite.

If poems or prose writings had intelligence, and could think for themselves, there would be one infallible test for intrinsic value that they might append to themselves after they had stood the further test of time: "Only remembered for what I have done." For instance, several years ago a little poem appeared in one of our daily papers from a local author. I cannot think he was paid for it, nor can I think any other paper ever thought it worth copying for its own columns. I well remember glancing over it with a little bit of contempt in my mind and a good deal of indifference, and feeling sure it was quite without "literary merit." It was about the "baby boy," a very hackneyed subject, you will all agree.

Well, the other day my pride of judgment received a humiliating blow. A woman, good and true, in the humble ranks of life, had seen this poem. Her own baby boy was only a few weeks old, and perhaps she had let creep into her heart the thought that he was something of a burden, with poverty and hard work pressing upon her each day. The little poem struck a higher, better chord than that, and the tune of her thoughts grew sweeter. She cut it out of the paper and tucked it into the sewing machine drawer, and learned it, a line at a time, as she sat at work. Nor did it stop there; around among the neighbors it went, and brought many a blessing to the little babies in the poor, crowded houses.

Question: "Did the poem have literary merit?" Certainly, its simple phrasology, its humble truth, its honest purpose, spoke to the mind as well as the heart of these people as one of Browning's sonnets could not have done.

Again: There is a housekeeping paper published in one of our western cities. "Very ordinary," I have been wont to pronounce it, and after a cursory, indifferent perusal I have sent away my numbers to a little housekeeper on a Virginia farm. She is a brave little woman, left, at the age of 14, by the death of her mother, to bring up the three younger children and do the housework. Very limited was her schooling, of course. For two years, now, she has had this housekeeping journal, and I have had her occasional letters. And how she has grown mentally! It must have been the "literary merit" in that paper that I called ordinary, and could not waste my time upon.

There is apparent literary value and an intrinsic one, I feel bound to admit. There may be two ways of considering whether a poem or a book lives. If it is printed over and over again at the demand of the people, all the world knows it lives. But it sometimes happens that it is printed only once, is caught up by some heart, passed on and on in word or influence, and the good it does never dies. Is it not really "literary merit" that makes it live—the mode of its expression as well as its inherent thought? I am asking; for at the very end of my remarks, with a full recognition of the value of high standards, with a just respect for editors, critics and cultivated readers, but with an equally ardent appreciation of comparative value, I humbly confess that I do not know what "literary merit" really is. —Juniata Stafford in Belford's Magazine.

### In a Mexican Market Square.

Passing on through the market place I emerged suddenly from a side exit into the market square. Just in front of me sat four or five groups surrounding a bunch of smoking faggots, and as I approached them a little girl or boy would step forward and offer for sale strings of glass beads or baskets of images made by Indians from clay. I bought several of these images and narrowly escaped being cheated in the process, for the little rogues who are playing merchants know when they have a stranger to deal with, and, although they smile at you, showing their white, pearly teeth, they will give you the wrong change if they can.

Just beyond these groups I saw other groups seated about large, square holes, which had been dug in the ground. At first I could not understand this, but after awhile I found out that they were engaged in roasting the century plant. The holes in the ground were apparently three feet deep and perhaps four feet across the top. Inside these holes they had placed a half dozen stalks of the plant over smoking faggots, and from the smoldering fire there issued a volume of smoke and the sound of escaping pulque. By and by a Mexican strode up, threw down a three cent piece, and, without a word, one of the agile boys jumped into the hole, chopped off a bit of the wood and delivered it to the purchaser, who went away munching on it as though it was the leg of a chicken. The juice of the maguey is sweet and intoxicating, and a great many of the Mexican people are, I regret to say, slaves of its power.—"R. M. Y." in St. Louis Republic.

### In a Mormon Sunday School.

It is easy to see how largely the foreign element prevails here among the Mormons. There were in Utah in 1880 about 44,000 foreigners to 100,000 natives, and since then there have been about 13,000 Mormon immigrants. These immigrants are chiefly English and Scandinavians, and you may see Swedish faces everywhere. In the Sunday school which I visited there was a Swedish class which was taught in the Swedish language.

This Sunday school is worthy of mention. After the administration of the sacrament the school divided up into classes, and in these classes the sexes were always separated. During my visit one of the teachers kept constantly with me as I went from class to class, and it seemed to me that the teaching was largely for the benefit of the visitors rather than for the scholars. I was offered the "Book of Mormon" and asked to read with the pupils in turn as the reading went around the class. After reading a chapter a young man explained it much as we Gentiles do in one of our Christian prayer meetings, and he told us how a branch of the Israelites came to the American continent and how the Lord again appeared upon the earth and chose his apostles here. He told how the record of his teachings in America among the aboriginal tribes was transcribed upon the golden plates of the "Book of Mormon," and how these were found in the state of New York. It was interesting as a romance, but I grew tired before he was through and left.—Salt Lake Letter.

### London's Inhabitants.

The city of London is said to have fewer inhabitants to the house than any other of the large cities of Europe. Vienna has five times as many.

A soldier who was seen to take off his cap while using the telephone informed a questioner that he did so because he was talking to his superior officer.

Of the 200 gold beaters in New York, not one is a woman, while of the 900 gold cutters not one is a man.

### A Japanese Temple and Bell.

If I were a good Buddhist I would say a prayer or two to the Chioin bell, the largest in Japan, but a monster breathing sweet music that thrills one from head to foot, and ringing so seldom that the dates are kept in mind carefully, lest one miss the great treat. The bell hangs in a shady little place at the top of a stone staircase by itself, and is struck from the outside by a swinging beam that gives the soft reverberations that do not jar on the ear, no matter how powerful they are. When the huge beam is unchained and swung it is generally at the time of the 5 o'clock mass in the morning, and heavy sleepers have been unconscious of the musical booming and missed it all. Others are wakened by the strange vibration and the soft music ringing and pulsating on the air, and in the half consciousness of waking it seems like part of some beautiful dream. It is the greatest pity that with such a magnificent bell the temple does not see fit to ring it oftener.

The Chioin is a rich temple, and its altar one of the most gorgeous in Kioto, a mass of carved and gilded ornaments surrounding a massive gilded shrine. Occasional worshipers come and kneel on the mats and mutter their prayers, but most often one finds the only occupant of the space before the altar is a lone old priest industriously hammering away at a modern drum shaped like a huge round sleigh bell. From 5 o'clock in the morning until the temple closes at 4 in the afternoon the thunk, thunk keeps up. A nice old woman, who must be a professional mender, from the incessant patching and darning of blue cotton garments that she keeps up, takes care of the shoes while one roams the temple stocking footed, but she does not offer to mend the foreign stockings one wears out on matted and polished wood floors.—Kioto Cor. Globe-Democrat.

### Shadowing a Suspected Man.

The work of shadowing a man is easier than a person who has never been in the business would think. You must first study your man thoroughly, so you would know him if you only saw one of his boots, and you must do this without attracting his attention, which is not always a simple thing to do. A man who is to be shadowed is always a man who has reason to suspect that he will be shadowed, and consequently he will be on his guard and very watchful. If the man is not an experienced criminal one detective ought to be able to follow him day and night as long as there is any necessity, but if he is an old hand one man cannot do the work, and can only queer it by trying it. There should be three or four shadows, each one ready to take up the work when for any reason the person who is following the man deems it prudent to quit.

You see an old criminal has many devices for finding out if he is being watched. He will jump on a car, ride a block and get off. Well, if you have not got another man ready to take up the trail then, you will flush your bird. Or he will get into a cab and ride a block or two and get out. We must be prepared for all that sort of thing. Usually the shadow will keep on the other side of the street from his man, from a half to a whole block behind him, and pay as much attention to keeping himself from being noticed as to watching the other fellow. It is work that not one detective in twenty can do scientifically, although some men are very expert. I know a man that saw a criminal make out an improper voucher, went with him and saw him get a check for it, then walked with him to the bank, saw him cash the check, and arrested him while he was counting the money.—Detective in Chicago News.

### Fixing Up the Passes.

When the interstate commerce bill went into effect, by the way, it was supposed that free passes would be everywhere abolished. The railroad passenger agents and managers so announced with a flourish of trumpets. But where a railroad man wills he still finds a way. As an illustration, I may mention the case of a friend who applied recently for a pass over a trunk line to a western city, scarcely expecting to get it, yet being compelled by his circumstances, and feeling that for indirect services long ago rendered he was entitled to transportation.

He was told that he could only get a pass within the lines of the state in which the main line of the system is incorporated, or between any two points within the boundaries of a single state. "Can't you fix me up for all the states in that way," he asked, "except between the stations when you cross the state lines, and let me pay for that distance to the conductor?" The man of passes smiled good naturedly as he said: "Yes, I might, but I'll tell you what I'll do. I know you are entitled to the consideration, and I'll just engage you in my traveling advertising corps for a couple of days. You shall have your traveling expenses for your services. Here are the passes." A wink and a pleasant nod accompanied the delivery of the bits of paper, which had meanwhile been filled up, and my friend came away wiser and happy.—New York Tribune.

### The Newsboys of Mexico.

Our contemporaries are making many suggestions as to the material of which the clothes of the newsboys should be made. Some think leather suits would be advisable in view of the short time the striped suits presented by the city government lasted, while others urge tin as the best material. This discussion enables newspaper men to air their wit, but it really seems unnecessary. The city government presented a given number of newsboys with uniforms, with the understanding that the boys would replace them at their own expense when worn out. Those suits have long since served their time and been discarded, and not a single one has been replaced by its owner. Unless the city government intends to clothe outright the urchins who sell papers in the streets, our contemporaries are wasting their time in discussing the kind of material that should be used for their uniforms, for there is no legal way of compelling the boys to buy the clothes that may be designated as proper for them by the authorities. To deprive a boy of the right to earn an honest living because he cannot or will not dress in a prescribed manner is not practicable in a free country.—Mexico Two Republics.

### The Lick Telescope.

The great Lick telescope in California promises wonderful discoveries in the skies. Professor Holden is very enthusiastic over its revelations, and says that he has had views of the planets, the stars, the milky way and the nebulæ that no other astronomer ever before had. The telescope resolves the nebula in Lyra into wreaths of "sun stuff" which are in the process of developing into solid bodies, and the observation of Jupiter promises to solve some of the curious questions about that planet.—Chicago Herald.

### Results of Mental Overwork.

The English Anthropological society has been culling from reports of schoolmasters' observations on the symptoms of mental fatigue. The observations reveal that weariness of mind reveals itself under the aspects of irritability and incapacity.

Children at school showed such signs of mental irritability as sleeplessness and nervous laughter, while those who were fatigued could neither sleep nor get up their taskwork. The flagging will showed itself by lolling, yawning, and a languid manner. Headache also resulted from overstrain in study, when combined with defective ventilation.—Youth's Companion.

Working Asses ATTENTION!

We are now prepared to furnish all classes with employment at home, the whole of the time or for their spare moments. Business new, light and profitable. Persons of either sex easily earn from 50 cents to $5.00 per evening, and a proportional sum by devoting all their time to the business. Boys and girls earn nearly as much as men. That all who see this may send their address and test the business, we make this offer. To such as are not well satisfied we will send one dollar to pay for the trouble of writing. Full particulars and outfit free. Address GEORGE STINSON & Co., Portland, Maine.

J. J. GUNN, Proprietor.
WINES, LIQUORS, CIGARS
A fine new billiard table; nicely fitted up club rooms to the use of patrons, in every respect.
FIRST-CLASS RESORT.

Deep SEA WONDERS exist in thousands of forms, but are surpassed by the marvels of invention. Those who are in need of profitable work that can be done while living at home should at once send their address to Hallet and Co., Portland, Maine, and receive free all information how either sex, of all ages, can earn from $5 to $25 per day and upwards wherever they live. You are started free. Capital not required. Some have made over $50 in a single day. All succeed.

$50 If you think of expending fifty or one hundred dollars in advertising send us a copy of your advertisement and we will tell you (free of charge), what will be the best possible investment for you to make. Send 10 cents for our 178 page pamphlet. Address, GEO. P. ROWELL & CO'S NEWSPAPER ADVERTISING BUREAU, 10 SPRUCE STREET, NEW YORK.

Invention has revolutionized the world during the last half century. Not least among the wonders of inventive progress is a method and system of work that can be performed all over the country without separating the workers from their homes. Pay liberal; any one can do the work; either sex, young or old; no especial ability required. Capital not needed; you are started free. Cut this out and return to us, and we will send you free, something of great value and importance to you, that will start you in business, which will bring you in more money right away than anything else in the world. GRAND OUTFIT FREE. Address TRUE & Co., Augusta, Maine.

INDEPENDENCE, CAL.

SATURDAY, NOVEMBER 17. .....1888

Mr. John Lucas was up from Lone Pine last Thursday.

Mr. A. S. McAfee was down from Big Pine last Tuesday.

G. W. Palmer was up from Lone Pine some days this week.

Mr. A. R. Conklin got back from San Francisco at the end of last week.

Baled hay is selling for ten dollars per ton at Independendence Station.

Mr. S. P. Roberts of Pine Mountain, was in town on Wednesday. He has a large quantity of ore on the dump at his mine.

Mr. W. H Russell and Mrs. Russell, of Benton, arrived at Independence on Wednesday. They will stay in town a few days yet.

The first rain of the season fell on Thursday night. It came down in a steady, warm pour. The Sierras are covered with snow far down their sides.

There is good demand for butter and eggs at Independence. Very little of either in the market. Butter brings 60 cents a roll, eggs 40 cents a dozen.

George Turner is reported to have made a big strike of silver and lead ore in a mine over near Deep Spring lake. He will soon make a shipment of the ore.

Mr. Israel Luce arrived at the marble quarry last Wednesday from San Francisco. He was accompanied by several expert marble workers. Mr. Luce will now go on quarrying marble for market.

Since the result of the election became known silver has been steadily increasing in value. Harrison heartily endorsed the plank in the Republican platform in favor of silver coinage.

Doctor Bishop has bought fifty thousand grape cuttings for planting on part of his land on the Eastside of the river. The cuttings will cover about 100 acres and are mostly of raisin grapes.

Mono county gave Mr. Coleman 78 majority for Assemblyman. The Republicans elected the County Clerk and Treasurer. The rest of the officers elected are Democrats. Vandever, for Congress, ran ahead of his ticket.

The Republican majority for the head of the ticket in Inyo county was over twenty-one per cent of the total vote cast. We would like to see the record that beats this. Opposition to free trade made the vote; the Sackville letter did'nt change a vote in the county; the thing was only laughed at here.

Protection was too strong for sectionalism in West Virginia. This is the first Southern State having a majority of white voters to give a Republican majority. As manufactories are established and new resources developed in other States these will also swing into line for protection to home interests.

A much astonished man a few days ago was Mr. C. B. Rawson. For the first time he went over to see the Eastside canal and the country it will irrigate. He had no expectation of finding such a great extent of fine country as he saw there. He expressed not less regret than surprise at his own indifference in not having looked more closely into the enterprise long ago.

Miss Addie Lewis intends going to San Francisco next week to stay several months. A farewell party at Main's hall was the form in which her many friends took leave of her. Handsome invitation cards were issued during the week and everybody responded. Very many friends wish Miss Lewis all the pleasure possible during her absence and will give her a hearty welcome on her return home again.

The total vote of California at the late election is about 250,000. From this it may be safely inferred that the census to be taken in 1890 will show the population of the State to be not less than 1,500,000. This will give the State five more Congressmen, making eleven in all, and with the two U. S. Senators will make the electoral vote of the State thirteen. California will thus have a much greater influence in Congress than at present.

### Majorities.

The majorities in Mono county are as follows: Harrison, about 135; Assembly, Coleman, R., about 70; Superior Judge, Hakes, D., 27; County Clerk, Kister, R., 73; Sheriff, Cody, D., 75; Treasurer, Brown, R., 5; District Attorney, Hayes, D., 172.—*Chronicle-Union.*

### Card of Thanks.

To the people of Big Pine and vicinity who so carefully and tenderly watched at the sick bed of our dear departed son, Andrew McMurry, and who so freely paid their last affectionate tribute of respect to the memory of the loved one who has passed away; the sincere and heartfelt thanks of the bereaved parents are hereby tendered.

S. J. McMURRY,
JANE McMURRY.

### Postponements.

The case of R. E. Barnes, charged with an assault with a deadly weapon, has been continued until February 26th. Mrs. Barnes is reported to be very ill in San Francisco and her husband is with her, hence the postponement. The case of S. A. Middleton also charged with an assault with a deadly weapon, has been continued until February 28th. Both of these cases had been set for trial this week. The Middleton case was postponed because the defendant is laid up from hurts received in a row last week.

### More Trouble.

Last Friday night Doctor Middleton got severely beaten in an encounter with John E. Dunlap. Mr. Dunlap had been summoned to attend Court at Independence as a witness in a case in which Doctor Middleton is concerned. At his own door in Bishop Creek he met Doctor Middleton; he said it would be very inconvenient for him to go to Independence, and objected strongly to going. An altercation ensued. As the report goes, Middleton pulled a pistol from his pocket; Dunlap had a large steel rasp in his hand; with this he struck Middleton and knocked him down and took the pistol from him, and beat him very severely. Doctor Woodin was telegraphed for to Independence; he went to Bishop Creek the same night and dressed Middleton's wounds. Such is the story as told by men who were near when the quarrel occurred.

## SUPERVISORS' PROCEEDINGS.

MONDAY, November 5, 1888.

The first Monday in November being the time for the regular meeting of the Board of Supervisors and the only member present being E. Robinson, the Board adjourned. No quorum was present on any day during the week and the meeting was adjourned from day to day.

MONDAY, November 12, 1888.

The Board met at 4:30 p. m. Present Supervisors Harger, Eldred and Robinson, and organized as a Board of Canvassers, to canvass the returns of the election held in Inyo county on November 6th, 1888. The returns from all the precincts not being in the Board, as a Board of Canvassers, adjourned until 10 o'clock a. m. of November 13, 1888. The Board met on Tuesday but adjourned without doing any business, no quorum being present.

TUESDAY, November 13, 1888.

The Board met in regular session. Present Supervisors Harger, Eldred and Robinson. Absent Boland and Eddy. Chairman Harger presiding.

Minutes of preceding meeting read and approved.

The following bills were allowed and warrants ordered to be drawn:

Bills of Election Boards were allowed in the sum of $30 each.

| | |
|---|---|
| H. Levy, conveying sick | $ 2 50 |
| A. E. Janvier, Board of Education | 11 80 |
| J. W. P. Laird " " " | 10 00 |
| D. Crough " " " | 10 00 |
| J. H. Shannon " " " | 24 50 |
| W. O. Meroney, taking affidavits | 9 50 |
| J. J. Moore, postage | 1 94 |
| Drs. Woodin, medical services | 36 00 |
| A. W. Eisheshutz | 12 92 |
| Independence Water Co | 16 00 |
| S. G. Gregg, Sundries | 25 55 |
| Mrs. J. Kepler, janitress | 30 00 |
| K. S. Krumley, digging grave | 5 00 |
| L. Wood, mdse | 5 50 |
| P. H. Mack, sundries | 23 40 |
| W. F. Matlack, repairing jail lock | 1 25 |
| H. S. Crocker & Co., blanks | 151 40 |
| C. Mulholland, printing | 259 60 |
| H. G. Plumley, Constable fees | 15 30 |
| J. W. Murphy, labor | 8 00 |

Bills of Nathan Rhine and C. S. Swan laid over till next Regular meeting.

The Board adjourned until next day at ten o'clock a. m.

WEDNESDAY, November 14, 1888.

The Board met pursuant to adjournment, the same members being present.

The bills of C. S. Swan and Nathan Rhine were reconsidered.

Nathan Rhine, bill for merchandise to the amount of $71.84 allowed in sum of $19 29.

C. S. Swan allowed $4.12.

Bid of C. Mulholland for county printing accepted and bond approved.

| | |
|---|---|
| Mrs. Lewis, for hospital | $160 00 |
| A. W. Eisheshutz, mdse | 15 75 |
| J. J. Woodin, County Physician | 150 00 |

A. R. Conklin appeared as counsel for petitioners for the appointment of Fire Commissioners for Independence. The Board appointed A. R. Conklin, A. W. Eisheshutz and Nathan Rhine as a Board of Fire Commissioners.

Petition for a road in District No. 3 rejected.

The quarterly reports of Overseers of Road Districts Nos. 2, 3, 4 and 5 were examined, accepted and approved. The report of Overseer for District No. 6 was laid over till next regular meeting.

The following claims were allowed and warrants ordered issued:

| | |
|---|---|
| W. H. Powers, R'd Dist. No. 2, | $100 56 |
| M. S. McLeod, " " " 3, | 255 00 |
| S. J. McMurry, " " " 4, | 115 76 |
| W. James, " " " 5, | 111 50 |
| P. W. Forbes, expenses | 12 00 |
| O. I. Mairs, board | 67 00 |

Bill of G. H. Palmer laid over till next regular meeting.

It was ordered that $40 be transferred from the General Road Fund to the Fund of District No. 2.

The Auditor was authorized to order the Treasurer to refund to all parties entitled rebate of taxes for 1888.

The Quarterly reports of the Auditor and Treasurer were examined and approved.

The Board adjourned until Thursday morning.

### Pistol Practice.

Last Saturday evening David D. Leahy and P. H. Staiger had a shooting scrape at Bishop Creek. Staiger is reported to be a quarrelsome man. A boy had been smoking a cigar in the barroom at Hill's hotel. The lit end of the cigar accidentally came in contact with the finger of Staiger; the boy offered ample apology, but Staiger would not be placated and abused the boy, who tried to get out of the way. In the end Leahy interposed to protect the boy, and knocked Staiger down. Staiger then left the hotel, but soon returned, armed with a pistol. Leahy had no weapon, but the boy had a small, worthless pistol which Leahy took when Staiger was seen entering the hotel. Leahy, who was sitting by the stove, stepped toward the door and told Staiger not to come any further. Both men raised their pistols and fired nearly together. Several shots were fired. Leahy hit Staiger once right in the chest, but the worthless pistol had not force enough to send the ball through his skin. Leahy was not hit. Staiger was taken away unhurt. Leahy was cool and unexcited and he is commended for protecting a boy against a bully.

### Raisin Growing.

A good deal of land along the Eastside canal will be planted with raisin grape vines between now and next spring. The greatest care should be taken that no diseased vines should be brought into the country. Up to the present time we have no vine disease in Owens Valley and with reasonable care to prevent the importation of all diseased vines we can keep clear of all pests. If we once get infected vines among us parasites will spread everywhere, causing heavy loss and endless expenses. In the Vacaville country and other parts of the [illegible] Vineyards are ruined by disease. We [illegible] to organize a district and appoint an I[illegible] to look after all kinds of fruit pests and take measures for their exclusion or destruction.

### DESERT LAND FINAL PROOF.

D. E. No. 216.

UNITED STATES LAND OFFICE, INDEPENDENCE, CAL., Nov. 14, 1888.

Notice is hereby given that James R. Moffet, of Lone Pine, Inyo county, Cal., has filed notice of intention to make proof on his desert land claim No. 246, for the S W ¼ of S W ¼ Sec 2, S ½ of S E ¼ sec 3, N E ¼ of N E ¼ sec 10 N W ¼ of N W ¼ Sec 11, Tp 15 S, R 35 E, M D M., before the Register and Receiver of the office at Independence, Cal., on Monday, the 24th day of December, 1888.

He names the following witnesses to prove the complete irrigation and reclamation of said land: Albert W. Simonson, John J. Stewart, William D. Eakin and Reuben C. Spear, all of Lone Pine, Inyo county, California.

JOHN W. P. LAIRD, Register.

### Election Returns

### ASSESSMENT NOTICE.

INYO MARBLE COMPANY OF CALIFORNIA—Location of principal place of business, San Francisco, California; location of works Inyo county, California.

Notice is hereby given that at a meeting of the Board of Directors, held on the 24 day of October, 1888, an assessment (No. 4) of five (5) cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the Company, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 34 day of November, 1888, will be delinquent and advertised for sale at public auction, and unless payment is made before will be sold on MONDAY, the 34 day of December, 1888, to pay the delinquent assessment, together with cost of advertising and expenses of sale. By order of the Board of Directors.

GEORGE W. LUCE, Sec.
Office No. 205 Front S., San Francisco, Cal.

### DESERT LAND FINAL PROOF.

The Largest Importing House.

# OUR RECORD

Is that of a progressing house. Its tide of trade knows no going backward. From the first we have been leaders. Leaders in styles, leaders in prices, all goods must pass through a few hands before they reach you. The fewer the better for the prices. Our dealings are direct with the manufacturer, and in such quantities that the thinnest margin of profit suffices for him. By "quantities" we mean that we buy for the seven HALE stores located in leading cities of California.

## SHOPPING BY MAIL

Gives those at a distance the same advantage as city residents, is convenient, practicable and profitable. The brightest and best goods from every clime are at your command; besides you save from 10 to 40 percent by dealing with us. Orders are filled with promptness and precision by experienced persons, and the fact that goods are returnable if unsatisfactory affords evidence of our desire to give you absolutely the best service in our power.

## YOUR ATTENTION

Is called to the following special values which our Eastern buyers obtained by buying at the right opportuity. The goods are much under regular value and are in no wise defective. Orders should be sent quickly as the supply will doubtless soon be exhausted. Regular size White Blankets, wool-mixed, well made, price, $1.50. Ladies 5-button, Embroidered back, Kid Gloves, with scolloped tops, tans and browns. Price, 25c.

Union English Dress Fabrics in 25 choice hues and five designs at 12½c per yard. An excellent corset, made of jean, well boned and corded, silk embroidered, lace trimmed top, medium length, white or drab, sizes 18 to 30. Price 42c. Postage, 10c.

☞ For prices and descriptions of over a thousand articles of household use send for our Illustrated Catalogue. It is valuable, interesting and free.

**Catalogue and Samples Free.**

Young or old, married or single, sick or well, read it. Sent safely by mail, WHITTIER, St. Louis, Mo.

## LOG CABIN SUCCESS.

What is the young men?

Robert Garrett's father left him a fortune of twenty millions. He was from childhood reared in luxury; he received a splendid education with an especial training into a thorough knowledge of railroad management and was expected to succeed his father as a railroad king.

Within three years after the responsibilities which his fathers death threw upon him were assumed, he is reported a broken down man, with mind and health permanently shattered.

George Law is another young man left with millions of money, who is reported among the "wrecks." His father, bred a stone mason, was of gigantic size and strength, with commensurate brain power, so he became a great contractor, then a railroad king and left half a dozen millions for his son to dissipate. The young man is a success as a dissipator.

The founders of both of these great estates were born in the most humble walks of life, grew strong, mentally and physically, by simple living and honest labor and developed into financial giants. Their sons were reared in the lap of luxury and developed into intellectual pigmies.

The great men of our country have not, as a rule, come from the elegant mansions of the cities, but from the Log Cabins of the rural district. Simple ways of living, freedom from dissipation and enervating pleasures, simple remedies for disease, effective and which leave no poison in the system, develope brawny, brainy men, who compell the world to recognize their strength and power.

The wholesome, old-fashioned Log Cabin remedies are the safest and surest for family use. Our grandmothers knew how to prepare the teas and syrups of roots, herbs and balsams which drive disease out of the system by natural methods and leave no after ill effects. The most potent of these old-time remedies were, after long and searching investigation, secured by H. H Warner of safe cure fame, and are now put out for the "healing of the nations" in the Warner's Log Cabin remedies.

Regulate the regulator with Warner's Log Cabin sarsaparilla and with pure blood giving health, strength, mental and bodily vigor, you may hope to cope successfully with the most gigantic financial problems of the age, without wrecking health and manhood.

## KRUPP'S GUN WORKS.

**A Gigantic Establishment Which Employs Over Eleven Thousand Men.**

The steel casting works of Krupp cover an area of about 1,000 acres of land, in which 11,211 men are employed in the production of steel, and also in the manufacture of countless different articles, such as axles, wheels, etc., for locomotives and railroad carriages: rails, switches and sleepers for railways, tramways, and mining railways; springs—spiral and leaf—for locomotives and carriages; parts of all kinds of machinery used for any purpose; bridge material and rolls; material for large pumps as used in mines; all requisite steel and iron material for the building of ships of all sizes, for war and commercial purposes; cannons of every caliber—the production of them having already exceeded 20,000—an last, gun-carriages, artillery wagons and shots.

The gross production of iron and steel averages 260,000 tons per annum.

For accommodation of traffic and shipping in the establishment are used 28 locomotives with 883 freight carriages. About 45 miles of narrow and broad gauge railroad line is laid through the establishment. One chemical laboratory, 1 photographic and lithographic studio, 1 printing office and a book-binding establishment are at work for the sole use of the firm. Telegraph and telephone communication goes all over the factory and an engine company with 68 firemen and 38 fire alarms is also there for the benefit of the establishment.

This is the gigantic workshop to which you can see a regular stream of human beings run in the morning. The entire establishment is surrounded by a high wall, or a fence. There are only certain gates where the workmen are allowed to enter.—*Cor. Pittsburgh Dis-*

—Farmers' Cake: One-half pound of clear pork, one-half pint of hot water, one-half pint of molasses, one cup of sugar, one large cupful of chopped raisins, two eggs, (or I sometimes use but one and a spoonful of sweet cream), one large teaspoon of soda, a little salt and all kinds of spice. The pork to be chopped fine and the hot water poured over it. Put in flour enough to make a good thick batter. It requires more flour than when more eggs are used.—

## A LUCKY MAM.

**A Railroad Clerk Wakes Up and Finds He Has Drawn $15,000 in The Louisiana State Lottery.**

Mr. Frank Lawrence Dant held one-twentieth of ticket No. 3,894 which drew the first capital prize of $300,000 in The Louisiana State Lottery on the 7th inst. The $15,000 was collected through the Citizen's National Bank of Louisville. Mr. Dant is rather prepossessing in personal appearance, nearly six feet high and weighs 150 pounds. He is an intelligent and affable gentleman, only twenty-two years old and unmarried. He was educated at St. Mary's College, and learned book-keeping at the Southern Business College, Louisville. For three years he kept books for his father, Mr. J. W. Dant, proprietor of a large distillery of an old brand of pure Kentucky whisky at Dant's station, fourteen miles from Lebanon, Marion county, Ky.

One year ago he accepted the position of time-keeper for the Knoxville division of the Louisville and Nashville railroad, and clerk of assistant master of trains at a salary of $50 per month, and is stationed at the railroad, one mile from from Stanford, Ky. His good fortune has not turned his head, for he intends to hold his place, hoping by close application to business he will be promoted.

For two years he persisted in purchasing tickets in The Louisiana State Lottery. Four months since he organized a club, of which he was chief, and continued to buy tickets. Last month he drew $25, and on the 7th came the big prize. He has paid out what was due the club, and will invest his portion in some safe speculation, and continue to court fickle fortune as heretofore.—*Harrodsburg* (Ky.) *Sayings and Doings*, August 23.

AUTHOR OF "KING SOLOMON'S MINES," "SHE" "JESS," "THE WITCH'S HEAD," ETC.

(CONTINUED.)

His words gave me fresh energy. Catching him by the arm, I staggered, followed by Umslopogaas, who reeled after us like a drunken man, through the courtyards, up the great hall, which was silent as the grave, towards the queen's sleeping place.

We reached the first anteroom—no guards; the second, still no guards. Oh, surely the thing was done! we were too late after all, too late! The silence and solitude of those great chambers was dreadful and weighed me down like an evil dream. On, right into Nyleptha's chamber we rushed and staggered, sick at heart, fearing the very worst; we saw there was a light in it, aye, and a figure bearing the light. Oh, thank God, it is the White Queen herself, the queen unharmed! There she stands in her night gear, roused by the clatter of our coming from her bed, the heaviness of sleep yet in her eyes and a red blush of fear and shame mantling her lovely breast and cheek.

"Who is it?" she cries. "What means this? Oh, Macumazahn, is it thou? Why lookest thou so wildly? Thou comest as one bearing evil tidings—and my lord—oh, tell me not my lord is dead—not dead!" she wailed, wringing her white hands.

"I left Incubu wounded, but leading the advance against Sorais last night at sundown; therefore let thy heart have rest. Sorais is beaten back all along her lines and thy arms prevail."

"I knew it," she cried in triumph. "I knew that he would win; and they called him an outlander and shook their wise heads when I gave him the command! Last night at sundown, sayest thou, and it is not yet dawn! Surely'——

"Throw a cloak around thee, Nyleptha," I broke in, "and give us wine to drink; ay, and call thy maidens quick if thou wouldst save thyself alive. Nay, stay not."

Thus adjured, she ran and called through the curtains towards some room beyond, and then hastily put on her sandals and a thick cloak, by which time a dozen or so of half dressed women were pouring into the room.

"Follow us and be silent," I said to them as they gazed with wondering eyes, clinging one to another. So we went into the first anteroom.

"Now," I said, "give us wine to drink and food, if ye have it, for we are near to death."

The room was used as a mess room for officers of the guards, and from a cupboard some flagons of wine and some cold flesh were brought forth, and Umslopogaas and I drank and felt life flow back into our veins as the good red wine went down.

"Hark to me, Nyleptha," I said, as I put down the empty tankard. "Hast thou here among these thy waiting ladies any two of discretion?"

'Ay' she said, "surely'

"Then bid them go out by the side entrance to any citizens whom thou canst bethink thee of as men loyal to thee, and pray them come armed, with all honest folk they can gather, to rescue thee from death. Nay question not do as I say, and quickly. Kara here will let out the maids'

She turned, and selecting two of the crowd of damsels, repeated the words I had uttered giving them besides a list of the names of the men to whom each should run.

"Go swiftly and secretly go for your very lives," I added.

In another moment they had left with Kara, whom I had told to rejoin us at the door leading from the great courtyard on to the stairway as soon as he had made fast behind the girls. Thither too, Umslopogaas and I made our way, followed by the queen and her women. As we went we tore off mouthfuls of food, and between them I told her what I knew of the danger which encompassed her, and how we had found Kara and how all the guards and men servants were gone, and she was alone with her women in that great place and she told me, too, that a rumor had spread through the town that our army had been utterly destroyed, and that Sorais was marching in triumph on Milosis and how, in consequence thereof, all men had fallen away from her

Though all this takes some time to tell, we had not been but six or seven minutes in the palace and notwithstanding that the golden roof of the temple, being very lofty, was ablaze with the rays of the rising sun, it was not yet dawn, nor would be for another ten minutes. We were in the courtyard now, and here my wound pained me so that I had to take Nyleptha's arm, while Umslopogaas rolled along after us, eating as he went.

Now we were across it, and had reached the narrow doorway through the palace wall that opened on to the mighty stair.

I looked through and stood aghast as well I might. The door was gone, and so were the outer gates of bronze—entirely gone. They had been taken from their hinges, and, as we afterwards found, hurled from the stairway to the ground, two hundred feet beneath. There in front of us was the semicircular standing space about twice the size of a large oval dining table, and the ten curved black marble steps leading on to the main stair—and that was all.

### CHAPTER XXII.

HOW UMSLOPOGAAS HELD THE STAIR.

We look at one another

"Thou seest," I said, "they have taken away the door. Is there aught with which we may fill the place? Speak quickly for they will be on us ere the daylight." I spoke thus, because I knew that we must hold this place or none, as there were no inner doors in the palace, the rooms being separated one from another by curtains. I also knew that if we could by any means defend this doorway the murderers could get in nowhere else; for the palace is absolutely impregnable, that is, since the secret door by which Sorais had entered on that memorable night of attempted murder had, by Nyleptha's order, been closed up with masonry

"I have it," said Nyleptha, who, as usual with her, rose to the emergency in a wonderful way. "On the farther side of the courtyard are blocks of cut marble—the workmen brought them there for the bed of the new statue of Incubu, my lord let us block the door with them."

I jumped at the idea; and having dispatched one of the remaining maidens down the great stair to see if she could obtain assistance from the docks below, where her father, who was a great merchant employing many men, had his dwelling place, and set another to watch through the doorway, we made our way back across the courtyard to where the hewn marble lay, and here we met Kara returning from dispatching the first two messengers. There were the marble blocks, sure enough, broad, massive lumps, some six inches thick, and weighing about eighty pounds each, and there, too, were a couple of implements like small stretchers that the workmen used to carry them on. Without delay we got some of the blocks on to the stretchers, and four of the girls carried them to the doorway

"Listen, Macumazahn," said Umslopogaas, "if these low fellows come, it is I who will hold the stair against them till the door is built up. Nay, nay, it will be a man's death, gainsay me not, old friend. It has been a good day, let it now be good night. See, I throw myself down to rest on the marble there; when their footsteps are nigh, wake thou me, not before, for I need my strength," and without a word he went outside and flung himself down on the marble and was instantly asleep.

At this time I, too, was overcome and was forced to sit down by the doorway and content myself with directing operations. The girls brought the blocks while Kara and Nyleptha built them across the six foot wide doorway, a triple row of them, for less would be useless. But the marble had to be brought forty yards and there were forty yards to run back, and though the girls labored gloriously, even staggering along alone, each with a block in her arms, it was slow work, dreadfully slow.

The light was growing now, and presently in the silence we heard a commotion at the far off bottom of the stair and the faint clanking of armed men. As yet the wall was only two feet high, and we had been eight minutes at the building of it. So they had come. Alphonse had heard aright.

The clanking sound came nearer and in the ghostly gray of the dawning we could make out long files of men, some fifty or so in all, slowly creeping up the stair. They were now at the half way standing place that rested on the great flying arch, and here perceiving that something was going on above, they, to our great gain, halted for three or four minutes and consulted, then slowly and cautiously advanced again.

We had been nearly a quarter of an hour at the work now, and it was almost three feet high.

Then I woke Umslopogaas. The great man rose, stretched himself and swung Inkosikaas round his head.

"It is well," he said. "I feel as a young man once more. My strength has come back to me, ay, even as a lamp flares up before it dies. Fear not, I shall fight a good fight; the wine and the sleep have put a new heart into me.

"Macumazahn, I have dreamed a dream. I dreamed that thou and I stood together on a star and looked down on the world, and thou wast as a spirit, Macumazahn, for light flamed through thy flesh, but I could not see what was the fashion of my own face. The hour has come for us, old hunter. So be it; we have had our time, but I would that in it I had seen some more such fights as yesterday's.

"Let them bury me after the fashion of my people, Macumazahn, and set my eyes toward Zululand," and he took my hand and shook it, and then turned to face the advancing foe.

Just then, to my astonishment, the Zu-Vendi officer Kara clambered over our improvised wall in his quiet, determined sort of way, and took his stand by the Zulu, unsheathing his sword as he did so.

"What, comest thou too?" laughed out the old warrior.

"Welcome—a welcome to thee, brave heart! Ow! for the man who can die like a man. Ow! for the death gripe and the ringing of steel. Ow! we are ready. We wet our beaks like eagles, our spears flash in the sun, we shake our assegais, and are hungry to fight. Who comes to give greeting to the chiettainess" (Inkosikaas)? "Who would taste her kiss, whereof the fruit is death? I the Woodpecker, I, the Slaughterer, I, the Swift footed' I, Umslopogaas, of the tribe of the Maquilisim, of the people of Amazulu a captain of the regiment of the Nkomatakost, I, Umsiopogaas, the son of Indazimba the son of Arpi the son of Mostlikaatze of the royal blood of T'Chaka, I of the Kings House, I the Ringed Man, I the Induna I call to them as a buck calls. I challenge them. I await them. Ow! it is thou, it is thou!"

As he spake, or rather chanted, his wild war song, the armed men, among whom in the growing light I recognized both Nasta and Agon, came streaming up the stair with a rush, and one big fellow, armed with a heavy spear, dashed up the ten semicircular steps ahead of his comrades, and struck at the great Zulu with the spear. Umslopogaas moved his body but not his legs, so that the blow missed him, and next instant Inkosikaas crashed through head piece, hair and skull, and the man's corpse was rattling down the steps. As he dropped his round hippopotamus hide shield fell from his hand on to the marble, and the Zulu stooped down and seized it, still chanting as he did so.

*Umslopogaas held the stair*

In another second the sturdy Kara had also slain a man, and then began a scene the like of which has not been known to me

Up rushed the assailants—one, two, three at a time—and as fast as they came the ax crashed and the sword swung, and down they rolled again, dead or dying. And ever as the fight thickened, the old Zulu's eye seemed to get quicker and his arm stronger. He shouted out his war cries and the names of chiefs whom he had slain, and the blows of his awful ax rained straight and true, shearing through everything they fell on. There was none of the scientific method he was so fond of about this last immortal fight of his he had no time for it, but struck with his full strength, and at every stroke a man sank in his tracks and went rattling down the marble steps.

They hacked and hewed at him with swords and spears, wounding him in a dozen places till he streamed red with blood, but the shield protected his head and the chain shirt his vitals, and for minute after minute, aided by the gallant Zu-Vendi, he still held the stair

At last Kara's sword broke, and he grappled with a foe, and they rolled down together, and he was cut to pieces, dying like the brave man that he was.

Umslopogaas was alone now, but he never blenched or turned. Shouting out some wild Zulu battle cry, he beat down a foe, ay, and another and another, till at last they drew back from the slippery, blood stained steps, and stared at him in amazement, thinking that he was no mortal man.

The wall of marble block was four feet six high now, and hope rose in my heart as I leaned there against it, a miserable, helpless log, and ground my teeth, and watched that glorious struggle. I could do no more, for I had lost my revolver in battle.

(TO BE CONTINUED.)

**HAMBURG FIGS.**

Being purely vegetable in their composition, no ill effects can result from their constant use. Hamburg Figs always produce the same effect with the same dose, which is of the greatest importance to those who wish to use them regularly and constantly. In this respect they are the exact opposite of violent cathartics and purgatives. Physicians recognize their value in cases of constipation during pregnancy, since they act so mildly but effectively.

HAMBURG FIGS never gripe or produce colic, and are so pleasant and agreeable that they may be taken at all times and places, without interfering with pleasure or business.

Hamburg Figs cost 25 cents a box at all druggists. Dose, one Fig.

The cure of the opium habit may be found in Dujardin's Life Essence. Without any opiate, the iron and protagon will furnish the nervous system all that it needs. It has never failed when faithfully used. Price, $1.50 a bottle. All druggists.

Mrs. H.—Norah, did Mrs. Richly leave any message when you told her I was not at home?

Norah—No, ma'am, she didn't; but she looked very much pleased.—Life.

**Not in Good Health.**

Citizen (to Uncle Rastus)—You seem to relish that melon, Uncle Rastus.

Uncle Rastus—Yes, sah; it am one ob de fines' Ise ett dis yeah.

Citizen—But you are not looking very well.

Uncle Rastus—No, sah; I don' feel werry peart, fo' er fac'; I 'specs it am de millyun I ett las' night.—New York Sun.

**Vivid, Certainly.**

"Yes," said Artis, "I have almost finished my painting of the 'Group in Sheol.'"

"What's unfinished yet?" inquired Amor.

"I don't know what to put in the foreground. Mephistopheles is not infernal enough."

"Well," said Amor, whose best girl has a little brother, "you might use a small boy."—Time.

**Business.**

Irritated Frenchman (to American who has taken him for a waiter)—Sir-r, you have gr-r-rossly insulted me. There is my card. My seconds vill vait upon you, sir-r-r.

American—Never mind your seconds, Frenchy. You can wait upon me just as well. Pass me the Worcester sauce, and be quick about it.—San Francisco Wasp.

**In the Course of Years.**

Citizen (to old engineer)—I s'pose in your long life on the road you have met with more or less mishaps?

Old Engineer—Oh, yes; lots of 'em.

Citizen—Probably run over dozens of people?

Old Engineer (with pride)—Dozens? I've run over hundreds!—New York Sun.

**Should Have Said "Gents."**

That was a contradictory sort of an effusion written by a discharged clerk to his former employers:

"Sept. 1, 1888. Roe & Doe: Gentlemen—You are no gentlemen. Respectfully yours, JOHN SMITH."—Harper's Bazar.

**Absorption.**

Next to the small boy on the front seat at a baseball game, the most remarkable case of absorption we ever saw was that of a cat which stepped on some floating sawdust in a mill pond, with the impression that it was solid.—Once a Week.

**Not So Bad.**

Hobbs—There goes a man who has buried fifteen wives.

Mrs. Hobbs—For heaven's sakes! What is he? A second Bluebeard?

Hobbs—No, an undertaker.—Detroit Free Press.

**Its Day Out.**

Customer (to waiter)—Some cheese, please.

Waiter—Beg pardon, sir; very sorry, sir. Cheese out, sir.

Customer—That so? When do you expect it back?—Life.

**Good for Tramps.**

The latest fad is that stockings must match the color of the shoes. While this lasts tramps will be in the height of style.—Once a Week.

**The Ways of Some People.**

Some people will enter a store not knowing what they want and go out kicking because they didn't get it.—Ottawa Local News.

**A WONDERFUL FOOD AND MEDICINE.**

Known and used by Physicians all over the world. SCOTT'S EMULSION not only gives flesh and strength by virtue of its own nutritious properties, but creates an appetite for food that builds up the wasted body. "I have been using Scott's Emulsion for several years, and am pleased with its action. My patients say it is pleasant and palatable, and all grow stronger and gain flesh from the use of it. I use it in all cases of Wasting Diseases, and it is specially useful for children when nutrient medication is needed, as in Marasmus."—T. W. PIERCE, M. D., Knoxville, Ala.

"Do you enjoy good health?" "Why, yes; to be sure; who doesn't?

Send for "How to Cure Skin Diseases."

Pimples, blackheads, chapped and oily skin prevented by CUTICURA SOAP.

Relief in one minute, for all pains and weaknesses, in CUTICURA ANTI-PAIN PLASTER, the only pain-killing Plaster. 25c.

RUBIFOAM

FOR THE TEETH KEEPS THE TEETH WHITE THE BREATH SWEET, AND THE GUMS HEALTHY.

Price, 25 cents a Bottle.

PUT UP BY E. W. HOYT & CO., PROPRIETORS OF HOYT'S GERMAN COLOGNE. LOWELL, MASS.

Miss Clam of Bad Man's Gulch, A. T., recently married a Mr. Fritter. And now she has her cards printed "Mrs. Clam-Fritter."

**PRUDENCE! PRUDENCE!**

In medication, as in aught else, prudence should be our guide. Yet thousands cast it to the winds. Every new nostrum finds its patrons, the medical empirics of every false school have their gulls. Every change in the gamut of humbug is rung successfully—for a time at least—the notes being furnished by the credulous. In happy contrast to the many advertised impostures of the day stands Hostetter's Stomach Bitters, now in its third decade of popularity, approved and recommended by physicians, indorsed by the press of many lands, sought and prized by invalids everywhere. It is an ascertained specific for and preventive of malarial diseases, chronic indigestion, liver complaint and constipation, checks the growth of rheumatism and neuralgia, is a peerless invigorant and useful diuretic. Nervous people benefit by it.

The poet who is always a-musing is not necessarily funny.

White Elephant of Siam, Lion of England, Dragon of China, Cross of Switzerland, Banner of Persia, Crescent of Egypt, Double Eagle of Russia, Star of Chili, The Circle of Japan, Harp of Erin.

To get these buy a box of the genuine DR. C. MCLANE'S CELEBRATED LIVER PILLS, price 25 cents, and mail us the outside wrapper with your address, plainly written, and 4 cents in stamps. We will then mail you the above list with an elegant package of oleographic and chromatic cards. Fleming Bros., Pittsburgh, Pa.

The Chinese word for "hash" is the longest and most difficult word to pronounce in the language. In the English language it is the most difficult word to define.

**A BABE IN THE HOUSE**

Is the source of much sunshine and joy, brightening many a dark cloud and lightening many a heavy load—but joys continual abide only in a healthy body. The Creator with great wisdom has distributed over the earth vegetable remedies for every ill of human kind. This marvelous Laboratory reveals its secrets to man only by long and searching labor. Few men have attained greater success than Dr. R. V. Pierce; nor devised for suffering humanity a greater production than his "Golden Medical Discovery," the unfailing remedy for consumption in its earlier stages, as well as for chronic nasal catarrh, scrofula, tumors and all blood disorders.

There is only one sure way to stop a small boy from asking questions, and that way is not satisfactory if you have any further use for the boy.

**THINGS WORTH REMEMBERING.**

When you feel a kind of goneness about the stomach it is a sign that your food does not sit well and that you are about to have a fit of indigestion.

When you begin to feel nervous and are unable to sit still comfortably; when your clothes suddenly seem to lose their fit and become too tight in places the fit of indigestion is surely upon you.

When this fit of indigestion is repeated from day to day it finally resolves itself into dyspepsia.

Chronic dyspepsia will surely make the happiest life a hell upon earth.

Remember that three to ten of BRANDRETH'S PILLS will cure the worst case of indigestion or dyspepsia, or both, and that a regular course of them, say two every night for a week or ten days will act as a preventitive of either complaint.

Mabel, who is a brilliant Latin scholar, signs her letters "Possum," which, being translated, means "I am Mabel."

As a Cure for Sore Throat and Coughs, "*Brown's Bronchial Troches*" have been thoroughly tested, and maintain their good reputation.

**AN EXTRAORDINARY PHENOMENON.**

No other term than the above would apply to the woman who could see her youthful beauty fading away without a pang of regret. Many a woman becomes prematurely old and haggard because of functional derangement. What a pity that all such do not know that Dr. Pierce's Favorite Prescription will restore their organs to a normal state, and make them youthful and beautiful once more! For the ills to which the daughters of Eve are peculiarly liable the "Prescription" is a sovereign remedy. It is the only medicine sold by druggists under a positive guarantee from the manufacturers, that it will give satisfaction in every case, or money will be returned. See guarantee on bottle wrapper.

Coffee is said to be a good disinfectant, but as a between-the-acts deordorizer the humble clove is still on top.

SARSAPARILLA, YELLOW DOCK AND Iodide of Potass.

It cures RHEUMATISM, NEURALGIA, Boils, Pimples, Scrofula, Gout, Catarrh, Tumors, Salt Rheum, and Mercurial Pains. It Purifies the Blood, Restores the Liver and Kidneys to healthy action, and makes the Complexion Bright and Clear.

J. R. GATES & CO., Proprietors, 417 Sansome St. San Francisco.

**A WALKING ADVERTISEMENT.**

Every man that smokes a pipe is a walking advertiser of the merits of "Seal of North Carolina Plug Cut" Smoking Tobacco.

The "Seal" is pronounced by all smokers the best Tobacco ever sold on the Pacific Coast.

DWIGHT'S SODA THE COW BRAND.

— TO MAKE —

DELICIOUS BISCUITS OR WHOLESOME BREAD

USE

DWIGHT'S COW-BRAND SODA OR SALERATUS.

ABSOLUTELY PURE.

ALWAYS UNIFORM AND FULL WEIGHT.

Be sure that there is a picture of a *Cow* on your package and you will have the best Soda made.

THE COW BRAND. DWIGHT'S SALERATUS

THE ONLY Brilliant Durable Economical DYES

Are Diamond Dyes. They excel all others in Strength, Purity and Fastness. None others are just as good. Beware of imitations—they are made of cheap and inferior materials and give poor, weak, crocky colors.

36 colors; 10 cents each.

Send postal for Dye Book, Sample Card, directions for coloring Photos., making the finest Ink or Bluing (10 cts. a quart), etc. Sold by Druggists or by WELLS, RICHARDSON & CO., Burlington, Vt.

For Gilding or Bronzing Fancy Articles, USE DIAMOND PAINTS. Gold, Silver, Bronze, Copper. Only 10 Cents.

Paine's CELERY COMPOUND

| CURES | PROOFS |
|---|---|
| Neuralgia | "Paine's Celery Compound cured my nervous sick headaches." Mrs. L. A. BRENTNER, San Jacinto, Cal. |
| Nervous Prostration | "After using six bottles of Paine's Celery Compound, I am cured of rheumatism." SAMUEL HUTCHINSON, South Cornish, N. H |
| Rheumatism | "It has done me more good for kidney disease than any other medicine." GEO. ABBOTT, Sioux City, Iowa. |
| Kidney Diseases | "Paine's Celery Compound has been of great benefit for torpid liver, indigestion, and biliousness." ELIZABETH C. UDALL, Quechee, Vt. |
| AND All Liver Disorders | |

ARM & HAMMER BRAND

*To Housekeepers and Farmers.*—It is important that the Soda or Saleratus you use should be White and Pure same as all similar substances used for food. To insure obtaining only the "Arm & Hammer" brand Soda or Saleratus, buy it in "pound or half pound" cartoons which bear our name and trade-mark, as inferior goods are sometimes substituted for the "Arm & Hammer" brand when bought in bulk. Parties using Baking Powder should remember that its sole rising property consists of bicarbonate of soda. One teaspoonful of the "Arm & Hammer" brand of Soda or Saleratus mixed with sour milk equals four teaspoonfuls of the best Baking Powder, saving twenty times its cost, besides being much healthier, because it does not contain any injurious substances, such as alum, terra alba etc., of which many Baking Powders are made. Dairymen and Farmers should use only the "Arm & Hammer" brand for cleaning and keeping Milk Pans Sweet and Clean.

OUR TRADE MARK

CHURCH & CO'S SODA

ON EVERY PACKAGE.

CAUTION. See that every pound package of "Arm and Hammer Brand" contains full 16 ounces net, and the ¾ pound packages *full* 12 *ounces* net, Soda or Saleratus same as specified on each package.

Packed in Card Board Boxes. Always keeps Soft.

## AMERICAN FASHIONS.

**Dress Fabrics and Costumes Imported for Autumn and Winter.**

The first importations of autumn woolens promise a season of plain goods in new shades and new weaving. Solid colors largely predominate, and are given novel effects by being woven in stripes in most varied ways, as, for instance, there are repped stripes alternating with diagonal stripes, corded stripes with satin-finished stripes, zigzag chuddah stripes with cashmere twilled stripes or armure and bird's-eye woven stripes with those of lengthwise reps or cords; and these stripes are further varied in widths, ranging from hair lines and half-inch modest stripes to those more bold and effective, from one to three inches wide, while clusters of one kind of stripe are massed to form wide stripes that alternate with solid stripes of a third kind of weaving. Many high-finished goods are shown in plain fabrics with the silken glossy surfaces produced by closely woven twills; these will be found becoming to women of dark complexion, who delight in luster, and have given up dull rough stuffs, even though of the finest qualities. Cashmeres are given a silken finish like that of Henrietta cloths, yet have no silk in them, and they are also woven in stripes, and are strewn with large dots that are made to look even more silky than the groundwork. Plain Henrietta cloths are imported entirely of wool, and are also mixed with silk in such large proportion that the dealers call them satteen Henriettas. It is the experience of dress-makers that these mixed Henrietta cloths, even of the finest wool and silk, will slip and fray in the seams, and do not wear near as well as the pure wool cashmeres, which now also rival them in luster. Among diagonal stuffs drap d'Alma is revived, with its widely woven twill, and there is a great deal of rough camel's-hair and of English serge in plain grounds and in stripes. The soft fine chuddah cloths for both house and street dresses are made in France, but closely imitate in weaving the genuine India stuffs. For winter costumes ladies' cloth is again imported in the light weights introduced last year, and in all the new dull colors.

Bordered costumes are largely imported for autumn and winter, both of plain and striped woolens. Cashmere-figured borders are on the richest goods, and are of great width, in palm leaves and other India designs in very gay colors, and also in the gray and quiet shades familiar in the borders of Paisley shawls. Many striped borders are also along one selvage of plain woolens, and some of these borders have silk woven in the stripes. Other borders are ombre or shaded, and still others are entirely of repped silk. A wide selvage like that of nuns' veiling is the simple border of many rough-surfaced wool goods, while a novelty is a border of large plaids on plain solid-covered materials. Hair-striped fabrics have very wide plain borders along one selvage, and there are plain cloths with striped borders in dull cashmere colors. Tinsel borders of gay metallic stripes are new on dull-colored woolens. Steel and silver borders and stripes are especially handsome.

Colored stripes and plaids are shown both separate and together; for instance, there are fine silk and wool goods with plaided stripes of great width alternating with plain stripes, and there are gay tartan plaid stripes on grounds of most quiet colors. Rough woolens in very large plaids are considered stylish in dark dull greens, and in combinations of green with gray, or green with brown, blue with brown, and blue with purplish red shades. Indeed, all dull-colored plaids are about to be revived.—*Harper's Bazar.*

## BUILDING SOCIETIES.

**The Most Reliable Savings Institutions for Salaried Men.**

It is not many years since building associations were looked upon with strong distrust by workmen. They could not understand the methods upon which the associations were based, and because they could not or rather would not, they refused to take advantage of the opportunities they offered. All this is being changed. The first building association in this country was organized in New York, but before it was in successful operation ten had been organized in New York, but before it was in successful operation ten had been organized in Philadelphia, and the members were reaping the benefits by building homes. A paper published in the interest of building associations gives the following statistics: In New York there are 2,000 associations; in Philadelphia, 2,700; Boston, 650; Chicago, 300; St. Louis, 79. In St. Louis, in the past five years, it is estimated that 8,500 homes have been built by members of building associations. That these associations have done a great work in inciting salaried men to build their own homes there can be no doubt. Manufacturers ought to encourage their men to build homes. It is safe to say that any workman who owns his own home will be more attentive to his work and more faithful to his employer. In furnishing an employe an opportunity and a motive to save, the employer would foster a feeling of mutual interest between him and his men that would work to his interest. This has been done successfully in Philadelphia, and there is no reason why it can not be done just as successfully anywhere else.—*Stoves and Hardware.*

—A New Jersey couple were recently married after a courtship of twenty-four years. Twenty-four years of absolute bliss is more than most mortals can expect.—*New Haven News.*

## GO SLOW, YOUNG MAN.

**It Is Those Who Can Wait and Work Who Succeed in Life.**

"Give to each proportioned thought its act."—Hamlet. Which simply means "go slow," and when in a hurry wait until your hurry is over.

A "proportioned thought" is a clear thought. It is the plan which one sees perfectly outlind in his or her mind, as you may see on paper the architect's plan for a building. To carry out this "proportioned thought" in the mind with the body, it is necessary to go slow in order to get ahead fast.

Let us, then, learn to imitate Nature. The sun never hurries while setting. Neither does a hen. Both set in harmony with Nature's laws. Were the sun in as chronic a condition of hurry as are one-half of us miserable sinners, we should have sunrise half an hour after sunset and no night to sleep in; were hens in as great a hurry about setting as we are about living, there would soon be no broods of chickens brought to light, and with the failure of chickens there would soon be failure of eggs!

What if Mother Earth hurried her orbit 'round the sun, and completed a year in six months? Would she be any better off or we be any better off with rent doubling up on us?

Go slow. It's the old hunter who kills the most ducks, because he waits for hours where they come to feed instead of rampaging over miles of country like the young man searching for ducks to shoot and showing the ducks himself and his gun and what he's after. Hurry reveals lots of secrets which, from a business and most practical point of view, it pays better to keep to yourself. Hurry shows your opponent your cards and your "hand" in your face. What is time good for but to use to think in, and isn't time money?

Go slow. It's the little touches, the merest "dabs," the finest possible shadings of the picture that produce the "effect," and these, on the artist's part, are the result of study, time, repose, deliberation. The artist paints his mood of mind as well as the picture. He must not even move his brush or mix his colors in a hurry. There's a thought in every shading and an idea in every hair's touch of his brush and these can't be transferred to canvas at at 2:40 break-neck pace.

Go slow. Ideas are not hatched by straining and grabbing for them. They come to you when the mind is in a mood to receive them. You would call a farmer a fool to throw his seed on unplowed ground a month before the proper season for planting because he was in a hurry for the crop. There's a vast amount of human effort made about as sensible.

Go slow. Many of the things a man hurries after are not worth the hurrying for. A young man was once in a great hurry to get married. He got married. Within a year's time he was in as great hurry to get unmarried. Soon he was in as great a hurry to get married again. But this is no way to rush into such a serious and important business. Had he gone slow at the start he would probably have saved himself lots of trouble, expense and sad experience.—*Prentice Mulford, in N. Y. Star.*

## TWO GREAT SOLDIERS.

**Field Marshals Von Moltke and Blumenthal at a Railway Station.**

At the height of the munching of sandwiches and the quaffing of beer, an old man, with a face like shriveled parchment, a spare figure, and a benevolent smile, tottered through the door-way. It was Moltke. The instant he appeared every military man in the room shot to his feet as though blown from a gun. Officers of the highest rank stood at attention as a common soldier does at the appearance of his commander. The famous Field Marshal saluted in return, but with an indescribably meaning smile as he put his two fingers to his forehead. Then sat down like the rest, bared his head for a breath of air, and, waving his hand comprehensively around the room, smiled and nodded in a cheerful and suggestive way. The pantomime said as plainly as words could have done: "Thanks. Sit down. It is very warm." Then Von Moltke laid his famous Field Marshal's baton—which is not such a gorgeous bauble after all—on one of the tables, straightened his back, and, seizing a glass of beer that was held out to him, drained it to the dregs. A man of evidently high rank in the army stepped forward while Von Moltke was drinking the beer, and, raising the baton from the beery table, held it reverentially to him. He evidently regarded the emblem of too exalted a nature to permit of its contact with a beer-soaked table, but Moltke had apparently forgotten all about it, for when he boarded the train half an hour later, the officer still walked behind carrying the symbol of the highest post of the greatest army in the world.

The only other Field Marshal in the German army, Blumenthal, exhibited a like disregard for his own baton, which, by the way, was given to him by the Emperor immediately after his accession to the throne. Blumenthal had handed his coat to one of his aides, his hat to another, and his baton to a third, when he entered the restaurant for a glass of beer early in the day. From that time he paid not the slightest attention to his three aides, but sat solemnly in the corner wagging his head in a melancholy fashion, and pounding the table vigorously as he whispered in the ear of an Austrian Prince. Both of the great Field Marshals wandered off when the train came into the station, but the instant they left the dining room they found guards of honor in every direction, and passed through long files of officers in the customary pose of military homage.—*Blakely Hall's Berlin Letter.*

## OF GENERAL INTEREST.

—A Georgia baby not quite two years old "has fallen over the foot of the bed one hundred and eleven times by actual count," besides mashing both hands rather badly, and having the surgeon called about twice a week to sew up cuts in his scalp.

—A Parisian Duchess has bettered Sarah Bernhardt's tiger club by adopting a real panther as a pet. She keeps it in a long cage and gives it sun and air on the veranda, where she feeds it herself, stroking it through the bars of the cage as she does so.

—The "bird-minders" of Southern rice plantations have sharp contests with the rice birds, who are vast consumers of the growing crop. Beginning their attacks when the grain is first formed, they destroy sometimes as much as ten per cent. of the crop.

—A physician briefly reviewing the history and progress of medicine says that in the time of the Middle Empire of Egypt's history, progress in medical knowledge was checked on account of the rule that new medicines and treatment could be employed by a doctor only at the risk of being put to death if the patient died.

—A correspondent of an English magazine alleges that a perfect cure for sleeplessness is to think of some dream one has had, the more recently the better, and to begin to go over again in the mind as nearly as possible the details of the dream. Sleep comes, he asserts, almost invariably and often as quickly as the fall of a curtain.

—An Englishman who was playing billiards in a public house made a bet that he would get one of the ivory balls into his mouth. He did get it in and there it stuck, in spite of all his efforts to dislodge it. The surgeon who was called in extracted the lump of ivory, but only after taking out several of the "experimentalist's" front teeth.

—It is said to be a curious sight to watch the little Indian children when they first come to the House of the Good Shepherd, in Denver, to be educated by the Government. When they first reach the institution they go up-stairs on their hands and knees, not understanding the use of the stairs, and sleep at night under the bed, from which they first pull the clothes.

—A coin bearing the following stamp, "Carolus III.—Dei Gratia 1782," was discovered imbedded in the coquina from the Anastasia quarries, near St. Augustine, Fla. It is presumed that those Spanish ships which came to Florida with bullion and were scuttled by the great pirate Morgan, are the source whence the coin came. A number of pieces coming from the same place have from time to time been discovered.

## THE TRUE ESTIMATE.

**Life Made Successful by Looking Forward and Not Backward.**

Most of us are so in the habit of measuring the success of our lives by our external achievements that we are in constant danger of losing the true estimate. A life is successful, not by reason of the external success which it wins, though this is not without its value, but according to the fullness and richness of its development. The only value of external success is as a sign of interior spirit. Our successes ought not to be things which are achieved by force of will or by skill of hand simply; they ought to be the fruits which the spirit of our lives bears, as naturally as the tree bears its appropriate fruit. No really strong life will miss some form of external success, though it may not be a form which the world recognizes; but its real achievement will always be interior and spiritual. That life is truly successful which unfolds itself strongly and harmoniously on many sides, and which has within itself the consciousness of having deserved success, whether success comes or is withheld. In the light of this truth—and it is a truth verified by the experience of all wise men—how inadequate are the common judgments of success! The world is given to the fallacy of measuring its great men by their ability to attract its attention at frequent intervals, and to rekindle the admiration which has already been excited by some previous work. But every man knows within himself whether he is successful or not, and knows it because he is conscious of his interior advance or retrogression.

Life is always and for all men a great possibility; the Golden Age lies before rather than behind; there are always greater things to be done than have been done; greater victories to be won than have been won. That which has been done, however great it may be, is never to a really great man any thing more than a prophecy of the things yet to be achieved. Such a man is always looking ahead, always anticipating new growth, always open to new truth, always expecting the expansion of his life; and such a man need never be disappointed. If success comes early, and then seems to ebb, there need come with this experience no disillusion to the soul that is really strong. The applause of the world, as it dies away, may leave one with clearer vision and greater hope in the final success of his life. Nothing that we achieve satisfies us, because life does not consist in external achievement simply, but in enlargement and advance. No matter how great the victory of to-day there must be another victory to-morrow, if the soul is to be sustained, and if the great hopes with which we set out are to be justified. No man is shut out from this success; no man is debarred from these great rewards.

## HIGH PRESSURE WORK.

**The Inevitable Result of Too Much Expenditure of Vital Energy.**

Undoubtedly one reason of the shortened and constantly shortening duration of life, at least among civilized nations, is found in the great amount of nerve force expended in a short time. We crowd into hours the thoughts, the recreations and the business which formerly, if done at all, occupied years. The inevitable result of this "high pressure" rate of work is given by Houghton in his "Animal Mechanics," as follows: When the same muscle, or group of muscles, is kept in constant action until fatigue sets in, the total work done, multiplied by the rate of work, is constant. Suppose a man, walking at his ordinary pace, does not become tired until he has gone thirty miles. If he walks twice as fast, then by this law he would be exhausted at the end of fifteen miles, having done only half the walk in a quarter of the time; if he walks three times as fast he will be tired at the end of ten miles, having done one-third of the work in one-ninth of the time, and so on, the total work varying as the square root of the time necessary to produce fatigue. To illustrate the actual amount of work done in the various physical contests which are made from time to time, Dr. Houghton calculates as follows: "A good idea may be formed of the rate in which the muscles give work in a boat race, by comparing this work with the average daily work of a laborer. In many kinds of labor there are four hundred foot-tons of work accomplished in ten hours. The oarsman performs in one minute the one hundredth part of his day's labor, and if he could continue to work at the same rate, he would finish his day's task in one hour and forty minutes, instead of the customary ten hours. The work done, therefore, in rowing one knot in seven minutes is, while it lasts, performed at a rate equal to six times that of the hard-worked laborer." From this method of computation it may be seriously doubted whether the aggregate of work done in a short but excessively active life, is so great as that accomplished in a longer but more moderate one.—*Christian at Work.*

## TWO USES OF FISH.

**An Anecdote of Gallant General Scott and Prof. Agassiz.**

General Scott thought it to be part of a soldier's duty to know how to cook, and did not feel above giving instructions in the culinary art. On his first visit to West Point, he found the bread at the hotel abominable; it was not fit even for dogs to eat, he declared, and he volunteered to go to the bake-house and give the cook a lesson. The next summer he was at West Point again, and this time the hotel-keeper exultingly called his attention to the bread.

"Yes, yes," said the General, "it is a little better than it was. This would perhaps do for the kennel," and he went to the bake-house again, and gave the cook a second lesson. He was especially fond of fish, and it was one of his hobbies to know the names of all the edible fishes, not only of this country, but of Europe. General Keyes, his private secretary, relates an incident which strikingly illustrates the different points of view from which two men, of perhaps equal enthusiasm, may look at the same subject.

Soon after Prof. Agassiz arrived in America, he went to West Point, and General Keyes passed an evening in his company. Naturally enough the conversation turned upon fishes peculiar to America, and General Keyes remarked that the professor would find the contents of a seine drawn on the coast of South Carolina full of interest. He proceeded to name some of the things which would no doubt be included in such a "catch," and, among the rest, mentioned the gar-fish.

Prof. Agassiz sprang out of his chair, seized General Keyes by the hand, and exclaimed:

"Have you seen a live gar-fish?"

"Many of them," said General Keyes.

"Well, I never saw a gar-fish alive," said the famous ichthyologist, "but I hope to see one soon, as it is of the oldest fish family alive in the ocean; its origin is antediluvian."

When this conversation was repeated to General Scott, he remarked that he didn't know any thing about the ancient origin of the gar-fish, but he did know that gar porridge was the meanest stuff that ever was made.—*Youth's Companion.*

### Elegant Autumn Mantles.

Demi-season mantles are of matelasse silk, of sicilienne, of velvet and of fancy cloth. Both short mantles and long cloaks are of the most unique shapes. The directoire revers, flowing collars and yokes of velvet are features of new garments. Short round mantles have a velvet yoke that lengthens into a vest in front, and soft cloth is then added in great plaits that keep their shape to the end of the wrap. Two materials appear in most cloaks and in the shortest garments. The large buttons of directoire cloaks are of colored metals, cut steel, tinted pearl, and also of velvet. Long cloaks are of figured cloths, with velvet directoire revers, and some have sleeves that extend to the foot of the garment, and are bordered there with velvet or with fur. Bears' fur and others of long fleece that is almost shaggy are fashionable trimming for winter cloaks. The nun's cloak, full and long enough to cover the wearer, and furnished with a hood, is made of light camels'-hair stuff, lined throughout with silk, for early wear.—*Harper's Bazar.*

## SEEKING SYMPATHY.

**How One of the Sweetest Sentiments of Life Is Frequently Abused.**

Among the desires that sometimes claim satisfaction, without regard to the happiness of others, is that of sympathy. Now, of all the pleasures of life sympathy would seem to be one of the sweetest and purest. It unites brethren and friends in the closest bonds; it lifts burdens, soothes sorrow, multiplies joys and promotes human brotherhood. Flowing naturally from warm and loving hearts into grateful ones, it blesses both giver and receiver. It is the living spark which kindles all sorts of benevolent enterprises, builds hospitals, schools and churches, promotes reforms, draws men away from vice and guides them into paths of virtue and self-respect. Yet this beneficent factor in human life is not unfrequently abused by those who selfishly seek it. Not to mention those who try to awaken it in others for the sake of the material benefit which may come to them, there is a large class of people who crave it for its own sake as a sort of indulgence, which they think they must have at whatever cost to others. They are never content unless some one is condoling with them and pitying them, and the more sympathetic pain they can induce their friends and neighbors to feel the better satisfied they are. So sweet a morsel do they find this to be that they treasure every ailment, so as to recount it; they dwell upon their disappointments, their trials, and their woes, cherishing the memory of them to pour them into the ears of every willing listener, and to compel him to feel something of the suffering which they so diffusely portray as their own. Of course this process leads insensibly to great exaggeration. Such is the action of the mind, that whatever is dwelt upon exclusively assumes magnified proportions; and a slight headache or other physical discomfort, which might be forgotten amid pressing interests, may become almost unbearable when allowed to occupy all the thoughts. Much more is this the case with mental anxieties or troubles, and, be they slight or severe, the habit of brooding over them always augments their hardship. In recounting them to one whose sympathy is hoped for the tendency to further exaggeration is increased, and very often the listener is made to feel a sympathetic pain, which is really far greater than that which has been inflicted for his benefit. Certainly nothing could injure the cause of true sympathy more than such fraudulent and mean attempts to obtain it. Its power lies in its perfect freedom and in the reality of the suffering which it seeks to relieve. When it is wasted on sham afflictions or drawn out by selfish angling for it, there will always be a reaction and a hardening of the heart. Much sympathy is thus crushed out of existence that would otherwise be permanently active in blessing the world. Those who seek in this way for sympathy in all their real and fancied troubles are adding to the distress of human life, instead of to its happiness. When they meet with any good fortune they seldom call upon others to rejoice with them. Their joys they are content to monopolize, but their troubles of every kind they want to share. With one of a generous and noble spirit it would be exactly the reverse. He would bury his griefs in his own bosom, hide his pain whenever it was possible, be mostly silent about his diseases, his disappointments, his annoyances, his trials; but, on the other hand, he would delight in emphasizing all that was glad and beautiful and bright, that others, too, might partake of his pleasure. Montaigne says: "I daily endeavor to shake off that childish humor and inhumane conceit which causeth that by our griefs and pains we ever desire to move our friends to compassion and sorrow for us, and with a kind of sympathy to condole our miseries and passions. * * A man should, as much as he can, set forth and extend his joy; but, to the utmost of his power, suppress and abridge his sorrow." There are enough clouds in every life to make each generous person anxious not to increase them by adding his own, but to chase them away, as far as possible, by spreading abroad all the sunshine that enters into his life to cheer and bless mankind. And the sympathy which he would not strive to obtain, but which he was always willing to bestow, will be extended free and unasked, and he will gratefully receive all the comfort and cheer which it so plentifully bears.—*Philadelphia Ledger.*

### Wife and Home Maker.

"The most perfect home I ever saw was a little house into the sweet incense of whose fires went no costly things. A thousand dollars served as a year's living for father, mother and three children. But the mother was the creator of a home; her relations with the children were the most beautiful I have ever seen; every inmate of the house involuntarily looked into her face for the keynote of the day, and it always rang clear. From the rosebud or clover leaf, which, in spite of her hard housework, she always found time to put beside our plates at breakfast, down to the story she had on hand to read in the evening, there was no intermission of her influence. She has always been and always will be my ideal of a mother, wife and home-maker. If to her quick brain, loving heart and exquisite face had been added the appliances of wealth and enlargements of wide culture, hers would have been absolutely the ideal home. As it was, it was the best I have ever seen."—*The late Helen Hunt.*

## HISTORY OF ACHILLES.

**A Revised Account of His Many Conflicts and His Last Defeat.**

In the intervals of his engrossing duties as editor of the *Olympian Gazette*, Colonel Homer wrote a poem called "The Iliad."

Colonel Homer has never received any royalty on his book, owing to the absence of an international copyright law.

The hero of this little romance of the Colonel's was a military gentleman named Achilles.

When he was very small Achilles' mother, who doubtless expected her son to honor his family by developing into a base-ball umpire, wished, with true motherly forethought, to render him invulnerable to brickbats and other persuaders.

So she dipped him into the river Styx, holding him by the heel, which section of his understanding was not saturated.

We pass over the time spent by Achilles in going to school, and take up his life again as he approaches manhood.

When the capture of Troy seemed desirable to the Greeks, a seer named Calchas was asked whether or not that town could be captured, and he said it could not unless Achilles assisted.

Achilles' mother, still watchful of her son, although he was a big boy now and belonged to the militia, feared he would be fatally killed if he went to the cruel war, so she sent him to the court of King Lycomedes.

Here he wore false hair and a bustle, read Browning's poems, and, in other ways, masqueraded as a girl.

General Ulysses suspected some trick of this sort and resorted to one himself to find whether Achilles was among the maids.

He offered a choice display of presents to them. Some selected spring bonnets, others took caramels and chewing gum, while a few enjoyed Ulysses' liberality to the extent of selecting dress patterns and jewelry. But one of the girls took a base-ball outfit.

This girl was Achilles.

The hiding scheme thus proving a failure and no substitutes being allowable, Achilles put on his uniform and sailed for Troy. Soon after his arrival he engaged in one of the profoundest sulks ever known.

The magazines of that day were full of war articles on the subject, in which different theories were propounded in explanation of Achilles' masterly inactivity; but the following recital may be depended upon as giving the true inwardness of the business.

Achilles had eloped with a girl named Briseis, and had taken her with him to Troy, probably with the intention of procuring her a situation in one of the laundries for which that town was famous, and of using her stipend as beer money.

Another party, named Agamemnon, who commanded the third army corps, had also been engaged in the maiden-stealing industry. He had abducted Chryseius, a daughter of one of Apollo's priests. This infuriated Apollo, and he sent an A1 pestilence into the Greek camp, which displayed a great deal of pernicious activity and refused to leave until Agamemnon sent the girl back home.

All would have been serene had the matter rested here, but Agamemnon then took Achilles' girl to fill the vacancy, and the latter got mad.

A little thing like that annoyed him.

After that Achilles and Agamemnon never saluted each other as they passed by.

Then Achilles refused to participate in the war, but sulked in his tent.

He did nothing but sulk, and drew his pay with unerring precision, until a Trojan named Hector killed Patroclus, a man who used to go to school with Achilles and play marbles with him.

Achilles then thought it was time to take a hand in the fray, to avenge his friend's death.

He did so, and for a time carried on a large wholesale business in Trojan gore.

After Troy surrendered, Major Achilles retired into private life and became postmaster of his town.

He was brought into prominence, however, by being shot by a Frenchman named Paris, who drew a bead on his heel, Achilles' only vulnerable spot.—*Life.*

—Ensilage is really winter green food, although it is fed to the cows as a regular portion of the ration, yet the horses, pigs, sheep and poultry relish it at times. It is the cheapest food that can be produced for winter use, and its value consists not only of its nutritious matter, but also of the benefit derived from it as a substitute for the dry food which cattle are compelled to eat during a long winter, the ensilage taking the place of grass or succulent food.

—"Clara," said the old man from the head of the stairs, "say to that young fellow that a storm is coming up." "All right, sir; thanks," responded the young fellow himself. "I hadn't noticed it. I think I'll wait and see if it doesn't blow over."—*N. Y. Sun.*

—Quizz—"So your little girl's name is Eve? How did you happen to call her that?" Fizz—"Well, you see, the night she was born I ate an apple and dreamed of snakes, and I thought the name very appropriate."—*Lowell Citizen.*

—An ugly animal should not be tolerated. Even without horns he is dangerous.

## ART AND HUMANITY.

**Man the Grand Ideal in the Grandest Works of Painters and Poets.**

As with pictures, so with poems. The poet's office is to be a voice, not of one crying in the wilderness to a knot of already magnetized acolytes, but singing amid the throng of men and lifting their common aspirations and sympathies (so first clearly revealed to themselves) on the wings of his song to a purer ether and a wider reach of vision. In the great poets there is an exquisite sensibility both of soul and sense that sympathizes like gossamer sea moss with every movement of the element in which it floats, but which is rooted on the solid rock of our common sympathies. Paint us an angel, if you can, with a floating violet robe, and a face paled by the celestial light; paint us yet oftener a Madonna, turning her mild face upward and opening her arms to welcome the divine glory; but do not impose on us any æsthetic rules which shall banish from the region of art those old women scraping carrots with their work-worn hands, those heavy clowns taking holiday in a dingy pot house, those rounded backs and stupid, weather beaten faces that have bent over the spade and done the rough work of the world, those homes with their tin pans, their brown pitchers, their rough curs and their clusters of onions. In this world there are so many of these common, coarse people, who have no picturesque sentimental wretchedness! It is so needful we should remember their existence, else we may happen to leave them quite out of our religion and philosophy, and frame lofty theories which only fit a world of extremes. Therefore let art always remind us of them; therefore, let us always have men ready to give the loving pains of a life to the faithful representing of common things—men who see beauty in these commonplace things and delight in showing how kindly the light of Heaven falls on them. And such men will always represent the higher art of their day. It is in vain that we look for genius to reiterate its miracles in the old arts; it is its instinct to find beauty and holiness in new and necessary facts, in the field and roadside, in the shop and mill. Proceeding from a religious heart it will raise to a divine use the railroad, the insurance office, the joint stock company, our law, our primary assemblies, our commerce, the galvanic battery, the electric jar, the prism and the chemist's retort, in which we seek now only an economical use. What a more than regal mystery encircles the poorest of souls for us! Well said St. John Chrysostom, with his lips of gold: "The true Shekinah is Man." There is but one temple in the world, and that is the body of man. Bending before man is a reverence done to this revelation in the flesh. We touch Heaven when we lay our hands on a human being. The greatest of the works of man is a less thing than the meanest man, for the meanest man has within him passions and emotions, and high longings and strivings which no art can fitly interpret. The real value of the Iliad or the Transfiguration is as signs of power; billows or ripples they are of the stream of tendency; tokens of the everlasting effort to produce, which even in its worst estate the soul betrays.—*Lippincott's Magazine.*

## TOOTH-PICK CHEWING.

**A Feminine Habit Almost as Disgusting as the Mastication of Gum.**

Do you ever chew a toothpick? Really, my dear, if you are addicted to that ungraceful habit let me plead with you to stop it at once. There are lots of ladies to be seen, especially on Dearborn street, every noon time, pursuing this highly indigestible and unbecoming course of diet, but I think if the greater part of them actually stopped to consider how course and unfeminine an appearance it gave them they would abandon the practice. Smiles that you flash at a friend from behind a toothpick are apt to lose their glamour on the way. It is all very well for you and for me to fall back when we are criticised upon the childish and defiant "I don't care!" We know we *do* care. There is not an Eve's descendant among us, from little Miss Katurah, yonder, in the glory of her sixteen years, down to the most faint and withered rose-leaf of a blessed grandma, who is indifferent to a decent man's or woman's good opinion. It was born in us, my dear, like the taste for sugar and the love of having our own way, and until you find a bird forgetting how to build its nest, or a honey bee how to sip a rose, you will never find a true woman who, deep down in her heart of hearts, cares nothing for the approbation of mankind There are nickel-plated creatures who do not, made with steel springs like my old Waterbury blunderbuss yonder, and labeled as women, but they don't count in this estimate. I refer to feminine women, contradictions, caprices, bewilderments and all! "While you are about it," suggests some one over my shoulder, "say some thing about gum-chewers." My dear, haven't I? For two mortal years haven't I wrestled with the queens who make fair the "garden of girls to abandon that idiotic, purposeless, unbecoming practice, and what avails it all? Every day I sit in the company of charming young women, meant by Heaven to be lovable and kissable and sweet, but who, half of them, by reason of contortions, self-imposed, transform themselves into mouthing lunatics. If I had a girl who chewed gum, I would put her in a convent. But if I had a mother who chewed gum I would sell myself for the price of a pint of buttermilk.—*Amber, in Chicago Journal.*

Respectfully submitted to the Board of Supervisors of Inyo County.

P. H. MACK,
County Auditor.

Examined, accepted and approved this 13th day of November, 1888, by the Board of Supervisors.

J. D. HARGER,
Chairman.

### A Female Book Agent's Triumph.

There is a crusty old bachelor who has an office in one of the tall buildings on La Salle street. His pet aversion is the book canvasser, although he has a score of minor aversions, all of which serve to bring out the rough side of his nature. The other day he was visited by a modest looking young lady, who was soliciting subscriptions for the "Art Treasures of Italy," in the endeavor to provide for the wants of her widowed mother and herself. As she entered the door the old man looked up, and, without waiting to learn the mission of his fair visitor, yelled out: "I haven't any money to give away for charity today," and went on with his writing. The young lady advanced still further into the room, and again the old fellow called out: "And I never buy any tickets for Sunday school excursions, either." By this time the young lady had approached the desk and modestly informed him of the object of her visit.

"What! A book peddler! No, ma'm; no books for me. Haven't time to talk to you. Go away and don't come here any more."

The girl turned away somewhat angry and seriously disappointed, but she said quietly, "There is one book, sir, you ought to buy and study well."

"What's that?" gruffly inquired the old man.

"'The Ethics of True Politeness,'" was the reply.

"How's that?" sputtered the old gentleman, and his face grew red. "Come here, young woman; let's see what you've got to sell."

And in less than ten minutes thereafter the name of the crusty old man adorned her subscription book.—Chicago Herald.

### United States Army Scouts.

United States army scouts may be divided into two classes: white men, who rank as chief of scouts, and Indian scouts, who are organized as military companies. The white scouts are usually men who have been employes of the San Carlos and Mescalero Apache reservations, or Indian agencies. They are, from constant association with the Indians, well acquainted with their character and habits, and frequently speak a little Apache. The Apaches, with few exceptions, speak Spanish, and it is usually the language they use in communicating with the Indian agent and the employes of the agency. A white man who makes himself useful to the Indians by doing them little favors is, in time, taught "to read sign." This may be said to complete the education of a chief of scouts.

It would be beyond the scope of a newspaper article to describe how "sign" is read, nor would anything save practical demonstration convey any comprehensive idea to the reader. A scout who can read "sign" can tell you by examining a trail over which horses have passed if they were ridden or led, and if both, the number ridden and the number led. Even when shod he can tell whether the horses were American or Mexican. If the trail be made by men on foot, he can tell if it be an Indian trail, or simply the trail of Mexicans wearing moccasins. In a hostile party he can tell by the trail how many are bucks and how many are squaws and children, and so on over a field of observation as extensive as interesting. The scout thus qualified finds no difficulty in obtaining employment in the southwest, where Apache outbreaks are of almost yearly occurrence.—Con A. Mahony in Inter Ocean.

### Profanity Among the English.

I heard an Englishman say, not long ago, that the reason he liked to be associated with a certain man in business, although that man was not very prompt in paying him his salary, was, that he always spoke to him as a gentleman, and never swore at him. Another man who offered him a better position, he hesitated to go with because he peppered his conversation with oaths. Not that the Englishman was such a tenderfoot, but he did not like such rough language. He said that it irritated him to have a man say to him, even though he meant to be perfectly amiable, "Where the h— have you been all this time?" It was a form of greeting which, while intended to be cordial, was unpleasant.

He did not deny that Englishmen swore, but he said he never heard oaths among the same class of Englishmen as were used by Americans of the same set. Of course you do not expect to hear a woman use profane expressions, but an English woman will not use any of the violent words that even an American lady has in her vocabulary. You may offend an English woman to the last point of her endurance, but she will only be "vexed," or, under unusually strong emotion, "very vexed." I notice that the young Americans whose lives are devoted to imitating English manners are very soft spoken, and their great aim seems to be self suppression. They consider it bad form to show any emotion at all.—New York Sun.

### Prepared for All Emergencies.

The city cousin had gone down to the farm to spend a month, and appeared on the morning after his arrival, "ready for action," at the picnic which stood first in the order of events. He carried a cane, and stowed away an umbrella in the wagon; his hat was attached by a ribbon to his buttonhole, another cord secured his colored glasses, and a field glass was slung upon his back.

"I do hope there won't be many musquitoes," said one of the party waiting on the piazza.

"I have a bottle of camphor in my pocket," replied the city cousin, calmly. "If they are very troublesome we can make a smudge. I have matches."

"Don't cork up the tea as if you never meant it to be opened!" called Kate to her sister, as they took a last look at the lunch basket.

"Never mind, I have a corkscrew," announced the provident guest. Just then the naughty boy of the family walked up to him, drew him mysteriously aside, and asked him confidentially:

"I say! I hope you've got a rope ladder in your pocket in case of fire, and a can of pemmican to use if we get wrecked on an iceberg?"—Youth's Companion.

### Presence of Mind.

Willie—What makes you come to our house so often, Mr. Hankinson! Do you want to marry our Irene?

Miss Irene (taken by surprise, but realizing with rare presence of mind that Mr. Hankinson has got to say something now)—Willie, you impertinent boy, leave the room!—Chicago Tribune.

### Easy Enough.

There is a controversy going on in the columns of our agricultural contemporaries with reference to the best method of telling the age of a hog. The man who takes up two seats in a railroad car could probably tell the age of a hog by looking in his family Bible.—Boston Courier.

### Doctors and Population.

In England the proper ratio of doctors to population is said to be one to 1,200, but by this rule there are 1,943 too many doctors in London, and while 600 die every year, 1,800 new ones are turned out. Competition is so great that in some parts of the city doctors will see a patient, prescribe and supply medicine for sixpence a visit.—New York Sun.

### Owing to Circumstances.

A man "stops" at a hotel when he lodges for one night; he "stays" when he is well fixed; he "puts up" when he is given a sky parlor; he is a "guest of the landlord" when he does not pay.—New

Working Asses ATTENTION!
We are now prepared to furnish all classes with employment at home, the whole of the time or spare moments. Business new, light and honorable. Persons of either sex easily earn 50 cents to $5 00 for every evening and a proportional sum by devoting all their time to the business. Boys and girls earn nearly as much as men. That all who see this may send their address, and test the business, we make this offer. To such as are not well satisfied we will send one dollar to pay for the trouble of writing. Full particulars and outfit free. Address GEO. STINSON & Co., Portland, Maine.

Deep SEA WONDERS exist in thousands of forms, but are surpassed by the marvels of invention. Those who are in need of profitable work that can be done while living at home should at once send their address to Hallet and Co., Portland, Maine, and receive free full information how either sex of all ages, can earn from $5 to $25 per day and upwards wherever they live. You are started free. Capital not required. Some have made over $50 in a single day. All succeed.

$50 If you think of expending fifty or one hundred dollars in advertising send us a copy of your advertisement and we will tell you (free of charge), what will be the best possible investment for you to make. Send 10 cents for our 174 page pamphlet, Address, GEO. P. ROWELL & CO'S. NEWSPAPER ADVERTISING BUREAU 10 SPRUCE STREET, NEW YORK.

Invention has revolutionized the world during the last half century. Not least among the wonders of inventive progress is a method and system of work that can be performed all over the country without separating the workers from their homes. Pay liberal; any one can do the work, either sex, young or old; no especial ability required. Capital not needed; you are started free. Cut this out and return to us, and we will send you free, something of great value and importance to you, that will start you in business, which will bring you in more money right away than anything else in the world. GRAND OUTFIT FREE. Address TRUE & Co., Augusta, Maine.

# INYO INDEPENDENT.

INDEPENDENCE, CAL.

SATURDAY, NOVEMBER 24 .....1888

## BORN.

PARTRIDGE—Near Camp Independence, November 19, 1888, to Mr. and Mrs. J. A. Partridge, a son.

## MARRIED.

NORRIS—ROBERTS—At Bishop Creek, November 14, 1888, by Rev. Andrew Clark, E. R. Norris and Julia Roberts.

Wet, wetter, wettest.

Who painted the dog?

Blankets and Comforters at Rhine's.

Mr. H. E. Wright, druggist was down from Bishop Creek last Monday.

Mr. Thomas W. Hill, of Big Pine, was at Independence several days this week.

Mr. Thomas Goodale, of Fish Springs, was in town some days this week.

Very good reports come from the Dark Horse mine. About twelve men are at work there.

Jerseys of every description—the neatest yet—at Rhine's.

Mr. R. Hessian and Mr. W. Uhlemeyer were down from Big Pine at the beginning of the week.

The Collins Brothers, of Poleta, were at Independence early in the week on business at the Land Office.

A large stock of dry-goods is on the way for Rhine's store at Independence. A list will be given soon.

George Storey has taken out about eighty tons of ore at the Poleta. It will be sent to the Maxim mill to be worked.

The rain continued through the week, with short intervals of clear weather. It is of vast benefit to the country.

Ladies' underwear and hosiery at Rhine's.

The wastegate on the Eastside canal was finished last Wednesday. Mr. McIver has since had all his force at work excavating on the canal.

Henry Detels has sold his place four miles south of Independence to Judge Hanoah. The tract contains one hundred and twenty acres.

Heavy rains at the end of last week and beginning of this have soaked the ground well. A good deal of plowing is being done in the neighborhood of Independence.

The whole Republican ticket was elected in Nevada. There was not a single exception. Nevada suffered heavily from the war on silver and the election proves that the voters knew well where the fault lay.

New Dress Goods in every variety at Rhine's.

Frank McTighe, who shot Charles Lenaman at Silver Peak last week, is reported to have been in trouble before. His record is bad generally. He is now in jail at Hawthorne.

Mr. David Levy and Miss Jennie McGinniss were married at Bishop Creek last Wednesday evening. Mrs. Levy is related to the family of Mr. S. J. McMurry, of Big Pine, and came from the East to visit her relatives about two years ago.

It is not expected that the case of W. T. C. Elliott will come up for consideration in the Supreme Court before next April. Elliott is still in jail at Independence under sentence of death for the murder of John B. White.

The piece of tin ore recently discovered by A. J. Davis near Independence Station appears to improve rapidly with depth. Mr. Davis has men at work sinking a shaft. The ledge is now wider than the bottom of the shaft and the ore looks well.

In the case of Broder et. als. vs. Conklin et als. The Supreme Court has ordered the case back to the Superior Court of Inyo county for trial. The Superior Judge has not yet got the papers in the case from the Supreme Court and time for trial cannot be fixed until the papers are received.

Water power under a pressure of 1630 feet is now used to produce an electrical power at Virginia City. The water is applied to a Pelton wheel and the machinery works to the entire satisfaction of the owners. This is the greatest water pressure ever used for propelling machinery.

The stock of Fall Goods now on exhibition at Rhine's is very complete.

### Fatal Boiler Explosion.

Last Monday at Butte, Montana, a boiler exploded at the smelter of the Boston & Montana Copper Company. Edward Edmonds, the engineer, Wm. O'Connor, head carpenter, and Winter and Cramer, laborers, were instantly killed. Their bodies were horribly mutilated. Five other employes were terribly injured, three of them probably fatally.

### Brought Back.

Last Monday Samuel M. Gruber entered suit against Samuel McMullen, and by a writ of attachment a lot of horses were seized by the Sheriff. McMullen was leaving the county and the horses were seized at Lone Pine and brought back to Independence. McMullen and his family are at Independence. Their case will come up before C. Mulholland, J. P., next Wednesday. The amount of the claim is $228.03. The claim was assigned to Mr. Gruber by Hill & Thomas, of Big Pine. The bill is for goods, wares and merchandise furnished to defendant.

### Needed.

No time should be lost in laying out a road from the Lone Pine road at Georges Creek to the river and a good location selected for a bridge across the river. The large and increasing settlement at Georges Creek must have easier access to the railroad than now exists. Farmers who should reach the railroad in two or three miles must now travel ten or twelve miles. On the east side of the river there will be many settlers within a short time; the canal is now built south opposite Georges Creek. Along the Stevens canal, now completed along the west side of the river, there will be also many new settlers. This will make the road and the bridge an absolute necessity.

## SUPERVISORS' PROCEEDINGS.

THURSDAY, November 15, 1888.

The Board met at 10 o'clock a. m., present, Supervisors Harger, Eldred and Robinson; absent, Boland and Eddy. Chairman Harger presiding.

Minutes of preceeding day read and approved.

An adjournment was taken till next day.

Thereupon the Board went into session as a Board of Canvassers.

Present, Supervisors Harger, Robinson and Eldred. Absent, Boland and Eddy.

Minutes of preceding day read and approved.

The returns from all voting precincts being in the Board proceeded to canvass said returns. The result of the canvass was given in the table published last week.

The persons receiving the highest number of votes for county and township offices were declared elected and the County Clerk was instructed to issue certificates of election. The Board adjourned.

### Another Shooting.

Charles Lenaban, clerk for John Chiatovich, and Asst. Postmaster, was shot and instantly killed at Silver Peak last Wednesday evening, a man by the name of McTeig doing the shooting. The particulars of the affair, so far as can be obtained, are as follows: It appears that the man McTeig travels under two names—McTeig and Pollard—but was only known in Silver Peak by the first name, and on the evening spoken of he went to the office and enquired if there was any mail for McTeig, and was told that there was not. He then asked if there was any for Pollard and was informed that there was. He told the Asst. P. M. to give him Pollard's mail, when Lenaman told him that he could not without an order from Pollard. This riled McTeig and he started for the back of the counter to help himself to the mail. Upon being checked by Mr. Lenaman he pulled a pistol from his pocket and shot the latter through the head, killing him instantly. The murderer then made his escape and fled to the mountains and at last accounts had not been captured. Four Pintes, armed with rifles were put on his trail and told to bring him back, dead or alive. Mr. Lenaman was a very and industrious gentleman and his untimely taking off will be sad news to his numerous friends in this county. McTeig was a recent arrival from Gold Hill and but very few seem to be acquainted with him.—*Esmeralda News.*

### The New Railroad.

The survey for the Salt Lake and Los Angeles railroad has been completed. The engineer in charge of the survey gives the following report of the route:

The main line now designated by the engineers as the most feasible, on leaving Milford bears across the Escalante valley and goes over the rim of the great Salt Lake basin opposite Pioche. Thence the general course is northwest to Bristol Pass, in the Ely range, near the Bristol mining camp, where great quantities of medium grade ore are mined. From there the line strikes over the White river watershed, and thence through Coal Valley over the Freiburg pass into the Pahnaper valley and on to Kane Springs. Beyond that the road runs on to the headwaters of the Amargosa river, which is followed to Ash Meadows, where the course is to Death valley, and on crossing the plateau between Death and Panamint valleys, the main line runs over into the Mojave desert, and straight on to Barstow. From there to Los Angeles is but a short run.

A VAST DEPOSIT OF MINERAL WEALTH.

Mr. Smith says his statements made in the report on the preliminary survey as to the mineral wealth of the country traversed by the extension must be enlarged, as they prove to be entirely beneath what the outlook would justily him in stating now. Not only he but other railroad men who have been through there recently, are very enthusiastic over the outlook. All that has been said before can be doubled and said over again, and Mr. Smith is certain that local traffic will abundantly support the road when once put through.

### A Very Favorable Proposition.

Messrs. L. A. Anger and J. A. Patridge make the best proposition that has yet been offered for sinking an experimental artesian well. The total cost of a machine to thoroughly test the matter will be eleven hundred dollars, including freight to Independence. Messrs. Anger and Patridge will give five hundred dollars; the remaining six hundred dollars should be easily raised by subscription. The money would be placed on deposit at Independence till the machinery should be received at the railroad station. There ought not to be the least trouble in raising the necessary amount; this is by far the most favorable proposition yet made. If the experiment shall prove successful and a flowing well be found, Messrs. Anger and Patridge will refund to the subscribers the whole amount each shall subscribe.

### A Happy Change In Prospect.

Mr. C. A. Cross, Superintendent of the Belleville mills, was at Independence this week. The mills have now been idle a long time and Belleville deserted in consequence. Mr. Cross says the owners of the mines and mills are very confident that the election of General Harrison will be followed by a steady rise in the value of silver; and this would enable them to resume work with all the old time vigor and Candelaria and Belleville would soon be booming again. There is plenty of ore in the mines that would pay a fair profit with silver at or near its former value, but it will not pay to work at the low value of recent times.

### Was It a Boy?

Somebody must have lost a boy. A few days ago a chicken was killed at Independence and in the crop were found seven brass buttons, each the size and shape of a cranberry, and a brass collar button. Appearances indicated that the chicken had swallowed a goyly dressed boy and that everything had been digested but the brass buttons.

At the Casey mine there is a good deal of ore in sight. Superintendent La Grange has quite a force of men at work and the mine is looking well.

### DESERT LAND FINAL PROOF.

D. E. No. 246.

UNITED STATES LAND OFFICE, INDEPENDENCE, CAL., Nov. 14, 1888.

Notice is hereby given that James R. Moffet, of Lone Pine, Inyo county, Cal., has filed notice of intention to make proof on his desert land claim No. 246, for the S W ¼ of S W ¼ Sec 2, S E ¼ of S E ¼ Sec 3, N E ¼ of N E ¼ Sec 10, N W ¼ of N W ¼ Sec 11, Tp 15 S. R 35 E, M D M., before the Register and Receiver of the office at Independence, Cal., on Monday, the 24th day of December, 1888.

He names the following witnesses to prove the complete irrigation and reclamation of said land: Albert W. Simonson, John J. Stewart, William D. Eakin and Reuben C. Spear, all of Lone Pine, Inyo county, California.

JOHN W. P. LAIRD, Register.

## ORDINANCE NO 27.

THE BOARD OF SUPERVISORS OF THE County of Inyo, State of California, do ordain as follows:

The following rules and regulations are hereby adopted for the government of the County Hospital of the County of Inyo, State of California, and for the preservation of health with in the said county of Inyo.

SECTION 1. All persons on their admission into the Hospital shall deliver to the steward all moneys, articles of value, baggage, etc., except such necessary articles as may be required for immediate use; and the steward shall label them properly and keep them until such time as they may be required, giving the owner a memorandum of the same, and such persons must bathe and change clothes immediately on admission into such hospital, and thereafter on Saturday of each and every week.

SECTION 2. All patients who are able to be up must rise in time and be ready for breakfast; after which they must vacate the wards as far as possible during the day, that the beds furniture and floor of the wards may be cleaned. Every patient able to do so is required to come to the dining room for meals.

SECTION 3. Each and every inmate will be required at all times to perform any duty assigned to them, either as nurse, or assisting about the house, and a refusal to comply will cause an immediate discharge, such duties to be assigned by the steward, or by his orders.

SECTION 4. All employees are required to use the utmost kindness in dealing with the inmates, and under no circumstances will abuse of any kind be tolerated.

SECTION 5. No liquors of any kind shall be allowed to be used by any one, except by order of the physician in charge.

SECTION 6. Card playing, gambling, loud or profane talking, vulgarity or disorderly conduct of any kind is positively forbidden.

SECTION 7. No inmate will be allowed to leave the premises without permission.

SECTION 8. Begging from visitors is positively forbidden; also, smoking in the wards without permission; and every inmate is required to use every effort to promote cleanliness.

SECTION 9. Any inmate who shall introduce ardent spirits, cause any nuisance, or disturb the house by quarreling or fighting, or behave immorally or disrespectfully, in any manner, or circulate any book, print or pamphlet of an indecent or immoral character, shall be immediately discharged.

SECTION 10. All patients who are able to be up are required to keep their beds and bedside tables in a neat and orderly condition.

SECTION 11. Visitors must not make presents to patients without permission from the steward. This rule has particular reference to fruits, pastry confectionery and liquors.

SECTION 12. Patients are required to retire at 9 o'clock p. m., at which time all lights unless otherwise permitted, are to be extinguished. No unnecessary conversation will be permitted in the ward. No candles or other extra lights will be allowed in the ward without the consent of the steward.

SECTION 13. All violators of the above rules by the inmates must be reported to the physician to be dealt with by him or to be reported by him to the Board of Supervisors, at his option.

SECTION 14. The steward shall be subject to the orders of the physician in charge, and any violation of such orders shall be reported by said physician to the Board of Supervisors.

SECTION 15. For the purpose of carrying the provisions of this ordinance into effect the person in charge of said Hospital shall be considered to be the Steward.

SECTION 16. Patients can only be discharged by order of the physician in charge, and the said physician must keep a record of all such discharges, together with the date thereof.

SECTION 17. The Clerk must cause fifty copies of this ordinance to be printed on stiff card board for posting in convenient places, to be designated by the physician in charge of said Hospital.

SECTION 18. This Ordinance shall take effect and be in force on and after twenty-five days from the date of its passage.

SECTION 19. This Ordinance shall be published, with the names of the Board of Supervisors voting for and against the same, in the INYO INDEPENDENT, a newspaper published in said Inyo county, at least two weeks, said publication to be made for said time and before the expiration of said twenty-five days.

J. D. HARGER,
Chairman of the Board of Supervisors of Inyo county, State of California.

Attest: P. H. MACK,
Clerk of the Board of Supervisors.

The above and foregoing Ordinance No. 27 was duly passed enacted and ordained by the Board of Supervisors of Inyo county, State of California, at a regular meeting of said Board on the 16th day of November, 1888, by the following vote:

Ayes—J. D. Harger, J. R. Eldred and E. Robinson.

Noes—

J. D. HARGER,
Chairman of the Board of Supervisors.

Attest: P. H. MACK,
Clerk of the Board of Supervisers.

[Endorsed.]

ORDINANCE NO. 27.

Filed and recorded November 16th, 1888, in Ordinance Book "B" page 5 et seq.

P. H. MACK,
Clerk.

### ASSESSMENT NOTICE.

INYO MARBLE COMPANY OF CALIFORNIA—Location of principal place of business, San Francisco, California; location of works Inyo county, California.

Notice is hereby given that at a meeting of the Board of Directors, held on the 2d day of October, 1888, an assessment (No. 4) of Five (5) cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the Company, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 3d day of November, 1888, will be delinquent and advertised for sale at public auction, and unless payment is made before, will be sold on MONDAY, the 3d day of December, 1888, to pay the delinquent assessment, together with cost of advertising and expenses of sale. By order of the Board of Directors.

GEORGE W. LUCE, Sec.

Office No. 205 Front St., San Francisco, Cal.

### DESERT LAND FINAL PROOF.

D E No. 242.

UNITED STATES LAND OFFICE, INDEPENDENCE, CAL., October 15, 1888.

Notice is hereby given that James Edward Shepherd, of Independence, Inyo county, California, has filed notice of his intention to make proof on his desert land claim No. 242, for the S W ¼, S ½ of N W ¼, N W ¼ of N W ¼, of Sec. 2, N E ¼ of Sec 3, Tp 14 S, R 35 E, M D M, before the Register and Receiver at Independence on Tuesday, the 27th day of November, 1888.

He names the following witnesses to prove the complete irrigation and reclamation of said land, viz.: Fred Holbert, Hiram C. Hamilton, Henry Detels and Henry L. Clark, all of Independence, Inyo county, Cal.

JOHN W. P. LAIRD, Register.

The Largest Importing House.

# OUR RECORD

Is that of a progressing house. Its tide of trade knows no going backward. From the first we have been leaders. Leaders in styles, leaders in prices, all goods must pass through a few hands before they reach you. The fewer the better for the prices. Our dealings are direct with the manufacturer, and in such quantities that the thinnest margin of profit suffices for him. By "quantities" we mean that we buy for the seven HALE stores located in leading cities of California.

## SHOPPING BY MAIL

Gives those at a distance the same advantage as city residents, is convenient, practicable and profitable. The brightest and best goods from every clime are at your command; besides you save from 10 to 40 percent by dealing with us. Orders are filled with promptness and precision by experienced persons, and the fact that goods are returnable if unsatisfactory affords evidence of our desire to give you absolutely the best service in our power.

## YOUR ATTENTION

Is called to the following special values which our Eastern buyers obtained by buying at the right opportunity. The goods are much under regular value and are in no wise defective. Orders should be sent quickly as the supply will doubtless soon be exhausted. Regular size White Blankets, wool-mixed, well made, price, $1.50. Ladies 5-button, Embroidered back, Kid Gloves, with scolloped tops, tans and browns. Price, 25c.

Union English Dress Fabrics in 25 choice hues and five designs at 12½c per yard. An excellent corset, made of jean, well boned and corded, silk embroidered, lace trimmed top, medium length, white or drab, sizes 18 to 30. Price 42c. Postage, 10c.

☞ For prices and descriptions of over a thousand articles of household use send for our Illustrated Catalogue. It is valuable, interesting and free.

MARRIAGE GUIDE

260 PAGES. Illustrated, in Cloth and Gilt Binding, by mail for money or stamps. Same, paper cover, 25c. This Book contains ALL the curious, doubtful or inquisitive want to know. Full of very interesting and valuable information. HEALTH, BEAUTY and HAPPINESS are promoted by its advice—who may Marry, who not, why. Medical, Moral, Physiological truths brought home to young or old, married or single, to the married or those contemplating marriage. Sent by mail, in sealed envelope, to any address, on receipt of 25 cents. Address, PEABODY MEDICAL INSTITUTE, Boston, Mass.

## "NASAL VOICES, CATARRH AND FALSE TEETH."

A prominent English woman says the American women all have high, shrill, nasal voices and false teeth.

Americans don't like the constant twitting they get about this nasal twang, and yet it is a fact caused by our dry stimulating atmosphere, and the universal presence of catarrhal difficulties.

But why should so many of our women have false teeth?

That is more of a poser to the English. It is quite impossible to account for it except on the theory of deranged stomach action caused by imprudence in eating and by want of regular exercise.

Both conditions are unnatural.

Catarrhal troubles everywhere prevail and end in cough and consumption, which are promoted by malnutrition induced by deranged stomach action. The condition is a modern one, one unknown to our ancestors who prevented the catarrh, cold, cough and consumption by abundant and regular use of what is now known as Warner's Log Cabin cough and consumption remedy and Log Cabin sarsaparilla, two old fashioned standard remedies handed down from our ancestors, and now exclusively put forth under the strongest guarantees of purity and efficacy by the world-famed makers of Warner's safe cure. These two remedies plentifully used as the fall and winter seasons advance, together with an occasional use of Warner's Log Cabin rose cream, to strengthen and protect the nasal membranes gave a positive assurance of freedom, both from catarrh and those dreadful and it neglected, inevitable consequences, pneumonia, lung troubles and consumption, which so generally and fatally prevail among our people.

Comrade Eli Fisher, of Salem, Henry Co., Iowa, served four years in the late war and contracted a disease called consumption by the doctors. He had frequent hemorrhages. After using Warner's Log Cabin cough and consumption remedy, he says, under date of Jan. 19th, 1888: "I do not bleed at the lungs any more, my cough does not bother me, and I do not have any more smothering spells." Warner's Log Cabin rose cream cured his wife of catarrh and she is "sound and well."

Of course we do not like to have our women called nose talkers and false teeth owners, but these conditions can be readily overcome in the manner indicated.

### Some Facts About Honey.

Starch and sugar when eaten undergo a digestive change before they are assimilated. In honey this change has been made to a considerable extent by the bees. It is partly digested, easy of assimilation and concentrated, and furnishes the same element of nutrition as sugar and starch—imparts warmth and energy.

As a medicine honey has great value and many uses. It is excellent in most lung and throat affections, and is often used with great benefit in place of cod liver oil. Occasionally there is a person with whom it does not agree, but most people can learn to use it with beneficial results. Children, who have more natural appetites, generally prefer it to butter. Honey is a laxative and sedative, and in diseases of the bladder and kidneys it is an excellent remedy. It has much the same effect as wine or stimulants, without their injurious effects, and is unequaled in mead and harvest drinks. As an external application it is irritating when clear and soothing when diluted. In many places it is much appreciated as a remedy for croup and colds. In preserving fruit, the formic acid it contains makes a better preservative than sugar syrup, and it is also used in cooking and confectionery.—American Bee Journal.

### Art Criticism by the Tailors.

The tailors of London are devoting their attention to artistic tailoring and, incidentally, to art criticism from a professional point of view. They conclude that few artists know how to properly portray a sitter's clothes, and that in only one or two of the pictures at the Royal academy can the materials be recognized. They praise Burne Jones' paintings without stint, but Poynter is criticised because his portrait of the earl of Harewood shows "an outside breast pocket on the right side of his lordship's coat," and Hall's picture of Earl Spencer is "a miserable failure," as the coat "looks more like moreen than fur." The strictures on the "style, fit and fashioning" of the clothes seen in the portraits are no less severe.—Chicago News.

Paper is now manufactured from sea weed, according to a process recently invented in Japan. The article made in this way is said to be so strong as to be almost untearable, is sufficiently transparent to admit of its being used as window glass, and takes all colors about equally well

## LUCK STRIKES ORANGE, N. J.

### Generosity of a Colored Man Who Won $15,000 in the Louisiana State Lottery.

Amos Marsh, the Orange (N. J.) African who won $15,000 in The Louisiana State Lottery the other day, doth not behave himself at all unseemly. When he got the cash in his hands—it came to him by the Adams Express Company, and the frieght was $60—he found the man who sold him the half of the winning ticket and gave him $50. Having relieved himself of this gift, the most fortunate darkey of his time proceeded to give his son, a rather happy-go-lucky youth, who does odd jobs about, something like $1,200 or $1,500, merely as a nest egg, as it were, to a future brood of as many thousands. Then the delighted Amos the next day—he had probably not slept a wink in the night, with all the money in the house—hired a hack, though the distance to the savings banks was only two blocks away, and rode, with Mrs. Marsh on the seat by his side, to make a deposit. It had been the original idea of Amos to buy two houses; not that he was not satisfied with his present acommodations, but because he thought that would be a good investment to begin with; but his dusky mistress promptly vetoed that bill, and insisted that one of the bank officers, whom all the people of the place knew as a kind and wise man, should decide for them at their leisure what should be done with the money.—*New York Press*, Aug. 28.

### THE REASON WHY.

The reason why the PACIFIC BANK, of San Francisco, has weathered the storms which have wrecked many sister institutions during the past quarter of a century, can only be attributed to the prudent and careful policy, and to its fixed principle, never to engage in speculative or questionable transactions.

# Allan Quatermain

## By H. RIDER HAGGARD.

(CONTINUED.)

And old Umslopogaas, he leaned, too, on his good axe, and, faint as he was with wounds, he mocked them, he called them "women"—the grand old warrior, standing there, one against so many! And for a breathing space none would come against him, notwithstanding Nasta's exhortations, till at last old Agon, who, to do him justice, was a brave man, mad with baffled rage, and seeing that the wall would soon be built and his plans defeated, shook the great spear he held, and rushed up the dripping steps.

"Ah, ah!" shouted the Zulu, as he recognized the priest's flowing white beard, "it is thou, old witch finder! Come on! I await thee, white 'medicine man,' come on! come on! I have sworn to slay thee, and I ever keep my faith."

On he came, taking him at his word, and drove the big spear with such force at Umslopogaas that it sunk right through the tough shield and pierced him in the neck. The Zulu cast down the transfixed shield, and that moment was Agon's last, for before he could free his spear and strike again, with a shout of "There's for thee, rain maker!" Umslopogaas gripped Inkosi-kaas with both hands, and whirled her on high, and drove her right on to his venerable head, so that Agon rolled down dead among the corpses of his fellow murderers, and there was an end of him and his plots together. And even as he fell a great cry rose from the foot of the stair, and looking out through the portion of the doorway that was yet unclosed we saw armed men rushing up to the rescue, and called an answer to their shouts. Then the would be murderers who yet remained on the stairway, and among whom I saw several priests, turned to fly, but, having nowhere to go, were butchered as they fled. Only one man stayed, and he was the great lord Nasta, Nyleptha's suitor, and the father of the plot. For a moment the black bearded Nasta stood with bowed face leaning on his long sword as though in despair, and then, with a dreadful shout, he too rush d up at the Zulu, and, swinging the gli tering sword around his head, dealt him such a mighty blow beneath his guard that the keen steel of the heavy blade bit right through the chain armor and deep into Umslopogaas' side, for a moment paralyzing him and causing him to drop his ax.

Raising the sword again, Nasta sprang forward to make an end of him, but little he knew his foe. With a shake and a yell of fury, the Zulu gathered himself together and sprang straight at Nasta's throat, as I have sometimes seen a wounded lion spring. He struck him full as his foot was on the topmost stair, and his long arms closing round him like iron bands, down they rolled together struggling furiously. Nasta was a strong man and a desperate, but he could not match the strongest man in Zululand, sore wounded though he was, whose strength was as the strength of a bull. In a minute the end came. I saw old Umslopogaas stagger to his feet—ay, and saw him, by a single gigantic effort, swing up the struggling Nasta, and, with a shout of triumph, hurl him straight over the parapet of the bridge, to be crushed to powder on the rocks 300 feet below

The succor which had been summoned by the girl who had passed down the stair before the assassins passed up was at hand, and the loud shouts which reached us from the outer gates told us that the town was also aroused, and the men awakened by the women were calling to be admitted. Some of Nyleptha's brave ladies, who, in their night shifts and with their long hair streaming down their backs, just as they had been aroused from rest, had worked so gallantly at blocking the passage through the wall, went off to admit them at the side entrance, while others, assisted by the rescuing party outside, pushed and pulled down the marble blocks they had placed there with so much labor

Soon the wall was down again, and through the doorway, followed by a crowd of rescuers, staggered old Umslopogaas, an awful, and, in a way, a glorious figure. The man was a mass of wounds, and a glance at his wild eye told me that he was dying. The "keshia" gum ring upon his head was severed in two places by sword cuts, one just over the curious hole in his skull, and the blood poured down his face from the gashes. Also, on the right side of his neck was a stab from a spear, inflicted by Agon; there was a deep cut on his left arm just below where the mail shirt sleeve stopped, and on the right side of his body the armor was severed by a gash six inches long where Nasta's mighty sword had bitten through it and deep into its wearer's vitals.

On, ax in hand, he staggered, that dreadful looking, splendid savage, and the ladies forgot to turn faint at the scene of blood, and cheered him, as well they might, but he never stayed or needed. With outstretched arms and tottering gait he pursued his way, followed by us all along the broad shell strewn walk that ran through the court yard, past the spot where the blocks of marble lay, through the round arched doorway and the thick curtains that hung within it, down the short passage and into the great hall, which was now filling with hastily armed men, who poured through the side entrance. Straight up the hall he went, leaving behind him a track of blood on the marble pavement, till at last he reached the sacred stone, which stood in the center of it, and here his strength seemed to fail him, for he stopped and leaned upon his ax. Then suddenly he lifted up his voice and cried aloud

"I die, I die—but it was a kingly fray Where are they who came up the great stair? I see them not. Art thou there, Macumazahn, or art thou gone before to wait for me in the dark whither I go? The blood blinds me—the place turns round—I hear the voice of waters."

Next, as though a new thought had struck him, he lifted the red ax and kissed the blade

"Farewell, Inkosi kaas!" he cried. "Nay nay, we will go together, we cannot part, thou and I. We have lived too long one with another, thou and I. One more stroke, only one! A good stroke! a straight stroke! a strong stroke!" and, drawing himself to his full height, with a wild heart shaking shout, he with both hands began to whirl the ax around his head till it looked like a circle of flaming steel. Then suddenly with awful force he brought it down straight on to the crown of the mass of sacred stone. A shower of sparks flew up, and such was the almost superhuman strength of the blow that the massive marble split with a rending sound into a score of pieces, while of Inkosi-kaas there remained but some fragments of steel and a fibrous rope of shattered horn that had been the handle. Down with a crash on to the pavement fell the fragments of the holy stone, and down with a crash on to them, still grasping the knob of Inkosi-kaas, fell the brave old Zulu—dead. And thus the hero died.

A gasp of wonder and astonishment rose from all those who witnessed the extraordinary sight, and then somebody cried, "The prophecy! the prophecy! He has shattered the sacred stone!" and at once a murmuring arose.

"Ay," said Nyleptha, with that quick wit which distinguished her—"ay, my people, he has shattered the stone, and behold the prophecy is fulfilled, for a stranger king rules in Zu-Vendis. Incubu, my lord, hath beat Sorais back, and I fear her no more, and to him

*"One more stroke, only one!"*

who hath saved the crown it shall surely be. And this man," she said, turning to me and laying her hand upon my shoulder, "wot ye that, though wounded in the fight of yesterday, he rode, with that old warrior who lies there, one hundred miles 'twixt sun set and rise to save me from the plots of cruel men. Ay, and he has saved me, by a very little, and therefore because of the deeds that they have done—deeds of glory such as our history cannot show the like—therefore I say that the name of Macumazahn and the name of dead Umslopogaas, ay, and the name of Kara, my servant, who aided him to hold the stair, shall be blazoned in letters of gold above my throne, and shall be glorious forever while the land endures. I, the queen, have said it."

This spirited speech was met with loud cheering, and I said that after all we had only done our duty, as it is the fashion of both Englishmen and Zulus to do, and there was nothing to make an outcry about; at which they cheered still more, and then I was supported across the outer court yard to my old quarters, in order that I might be put to bed. As I went my eyes lit upon the brave horse Daylight that lay there, his white head outstretched on the pavement, exactly as he had fallen on entering the yard; and I bade those who supported me take me near him that I might look on the good beast once more before he was dragged away. And as I looked, to my astonishment, he opened his eyes, and, lifting his head a little, whinnied faintly. I could have shouted for joy to find that he was not dead, only unfortunately I had not a shout left in me; but as it was grooms were sent for and he was lifted up and wine poured down his throat, and in a fortnight he was as well and strong as ever, and is the pride and joy of all the people of Milosi, who, whenever they see him, point him out to the little children as the "horse which saved the White Queen's life."

Then I went on and got off to bed, and was washed and had my shell shirt removed. They hurt me a good deal in getting it off and no wonder for on my left breast and side was a black bruise the size of a saucer

The next thing that I remember was the ramp of horsemen outside the palace wall some ten hours later. I raised myself and asked what was the news, and they told me that a large body of cavalry sent by Curtis to assist the queen, had arrived from the scene of the battle, which they had left two hours after sundown. When they left the wreck of Sorais' army was in full retreat upon M'Arstuna followed by all our effective cavalry. Sir Henry was encamping the remains of his worn out forces on the site (such is the fortune of war) that Sorais had occupied the night before, and proposed marching on to M'Arstuna on the morrow. Having heard this, I felt that I could die with a light heart, and then everything became a blank

When next I awoke the first thing I saw was the round disk of a sympathetic eye glass, behind which was Good

"How are you getting on, old chap?" said a voice from the neighborhood of the eye glass

"What are you doing here?" I asked faintly. "You ought to be at M'Arstuna have you run away, or what?"

"M'Arstuna!" he replied, cheerfully. "Ah, M'Arstuna fell last week—you've been unconscious for a fortnight, you see—with all the honors of war, you know, trumpets blowing, flags flying, just as though they had the best of it, but for all that weren't they glad to go! Israel made for his tents. I can tell you—never saw such a sight in my life!"

"And Sorais?" I asked.

"Sorais—oh, Sorais is a prisoner; they gave her up the scoundrels," he added, with a change of tone—"sacrificed the queen to save their skins, you see. She is being brought up here and I don't know what will happen to her, poor soul," and he sighed.

"Where is Curtis?" I asked.

"He is with Nyleptha. She rode out to meet us today, and there was a grand to do, I can tell you. He is coming to see you to-morrow, the doctors fear, there is a medical faculty in Zu Vendis as elsewhere, thought that he had better not come to-day."

I said nothing, but somehow I thought to myself that notwithstanding the doctors he might have given me a look, but then, when a man is newly married, and has just gained a great victory, he is apt to listen to the advice of doctors, and quite right too.

Just then I heard a familiar voice informing me that "Monsieur must now couch himself," and looking up perceived Alphonse's enormous black mustaches curling away in the distance.

"So you are here?" I said.

"Mais oui, monsieur, the war is now finished, my military instincts are satisfied, and I return to nurse monsieur."

I laughed, or rather tried to, but whatever may have been Alphonse's failings as a warrior (and I fear that he did not come up to the level of his heroic grandfather in this particular showing thereby how true is the saying that it is a bad thing to be overshadowed by some great ancestral name), a better or a kinder nurse never lived. Poor Alphonse! I hope he will always think of me as kindly as I think of him.

On the morrow I saw Curtis and Nyleptha with him, and he told me the whole history of what had happened since Umslopogaas and I galloped wildly away from the battle to save the life of the queen. It seemed to me that he had managed the thing exceedingly well, and showed great ability as a general. Of course, however, our loss had been dreadfully heavy—indeed, I am afraid to say how many perished in the desperate battle I have described, but I know that the slaughter has appreciably affected the male population of the country. He was very pleased to see me, dear fellow that he is, and thanked me with tears in his eyes for the little I had been able to do. I saw him, however, start violently when his eyes fell upon my face.

As for Nyleptha, she was positively radiant now that "her dear lord" had come back with no other injury than an ugly scar on his forehead.

"And what art thou going to do with Sorais?" I asked her.

(TO BE CONTINUED.)

### MILD, BUT EFFECTIVE.

Is the popular verdict of all who use HAMBURG FIGS, the crystallized fruit cathartic. They are prepared only in lozenge form, which renders them far preferable to any liquid preparation, either when traveling or at home; besides this, no liquid can be made so pleasant to the taste or capable of retaining their medicinal properties unchanged as in the concentrated form in which the Figs are prepared. Hamburg Figs are highly recommended by the medical profession as a mild and effective laxative and purgative. They are sold everywhere at 25 cents a box Dose, one Fig.

The latest French remedy for debility of *any organ* is Dujardin's Life Essence. It is the product of years of experimental study, and is in daily use in the French hospitals, with great success. Price, $1.50 a bottle. All druggists.

## RELIGIOUS AND EDUCATIONAL.

—Out of free religion has grown free irreligion, and out of infidel liberality, practical immortality.—*Joseph Cook.*

—Statistics of the cost of public education in Prussia have just been published. They show that the cost is fifteen per cent. per head.

—Boys are sometimes tempted to think that to be tender-hearted is to be weak and unmanly. Yet the tenderest heart may be associated with the strongest and most forcible mind and will.—*Christian at Work.*

—Probity, independence, uneasiness, tender regards for the feelings of others, and a hearty hatred for whatever is mean, tricky, vulgar or profane—these are among the qualities that distinguish the true gentleman.

—A religion that does not make a man honest and kindly, and fill his heart with noble aims to help others, is not worth the having. It is a delusion, and he is deceiving himself, if not trying to deceive others, and is thus a hypocrite.

—No simpler teaching can be found than that which our Lord himself has given us. If we err at all in preaching to adults, it is in the direction of obscuring the simple teaching of our Lord with our profound verbosities and subtle philosophies.

—The teacher must show his appreciation of a child's common sense as well as of his knowledge of the lessons. Sometimes the dull pupil has a better every-day judgment than the scholar who never fails in lessons, and will make an abler man.

—Shoclars are men of peace; they bear no arms, but their tongues are sharper than Actin's sword, their pens carry further, and give a louder report than thunder. I had rather stand in the shock of a bailisk than in the fury of a merciless pen.—*Sir T. Browne.*

—If a man builds nature straightway sets to work to undo his building. Rust eats into the iron and decay into the wood, and little by little time ravages and destroys. But if a man plants nature proceeds to complete his unfinished work. He sows a seed, and behold wheat; he plants a cutting, and behold a tree. Such is the difference between working alone and working with God. —*Lyman Abbott.*

—In preaching, never turn aside from a laugh any more than you would from a cry. If mirth comes up naturally, do not stifle it; strike that chord, and particularly if you want to make an audience weep. If I make them laugh, I do not thank anybody for the next move; I will make them cry. Did you ever see a woman carrying a pan of milk quite full, and it slops over on one side that it did not immediately slop over on the other also?—*Beecher.*

## WIT AND WISDOM.

—Never think that you can make yourself great by making another less.

—A "good man gone wrong" is usually a bad man found out.—*Buffalo Express.*

—Anger is the mother of cruelty; cruelty is the mother of crime.—*N. O. Picayune.*

—He who obeys with modesty appears worthy of some day or other being allowed to command.

—We are all creatures of habit, especially the girls who are out horseback riding.—*Rochester Post.*

—Some men are born witty. Others have a good memory and some witty friends.—*Somerville Journal.*

—There are many more shining qualities in the mind of man, but there is none more useful than discretion.

Happy is he who has learned to do the plain duty of the moment quickly and cheerfully, wherever and whatever it may be.

—The more a man follows nature and is obedient to her laws, the longer he will live, the further he deviates from these, the shorter will be his existence.

—There are many people in the world who spend the first half of their existence trying to taste all the sweets of life, and the second half in trying to get the taste out of their mouths.

MANLY PURITY AND BEAUTY

CUTICURA REMEDIES CURE SKIN AND BLOOD DISEASES FROM PIMPLES TO SCROFULA.

NO PEN CAN DO JUSTICE TO THE ESTEEM IN WHICH the CUTICURA REMEDIES are held by the thousands upon thousands whose lives have been made happy by the cure of agonizing, humiliating, itching, scaly and pimply diseases of the skin, scalp, and blood, with loss of hair.

### A DISH OF NEW P'S.

P stands for Pudding, for Peach and for Pear,
And likewise for Poetry and Prose;
The Parrot, the Pigeon that flies in the air,
The Pig with a ring in his nose;
For Paper and Pen, for Printer and Press,
For Physic, and People who sell it;
But when you are sick, to relieve your distress
Take at once Pierce's Purgative Pellet.

Oh, yes, indeed! These are the P's for you, poor, sick man or woman. Nothing like them for keeping the bowels and stomach regulated and in order; tiny, sugar-coated granules, scarcely larger than mustard seeds. They work gently but thoroughly.

The recent suicide of a telephone girl indicates that the suffering of those who use the instruments is sometimes too much even for the chosen agents of the inquisition.

For an Irritated Throat, Cough or Cold, "*Brown's Bronchial Troches*" are offered with the fullest confidence in their efficacy. *Sold only in boxes.*

### AN HONEST POUND.

Do you know that STAR PLUG is the only first-class Chewing Tobacco that is always made in 16-oz. plugs? You save from two to four ounces on every plug of tobacco used, by taking only STAR, and you get the best tobacco made.

* * * * * * * * *

We notice that a waterspout burst in Kentucky the other day. A waterspout that would go into business in Kentucky might expect to burst with no assets.

### DON'T GIVE UP THE SHIP.

You have been told that consumption is incurable; that when the lungs are attacked by this terrible malady, the sufferer is past all help, and the end is a mere question of time. You have noted with alarm the unmistakable symptoms of the disease; you have tried all manner of so called cures in vain, and you are now despondent and preparing for the worst. But don't give up the ship while Dr. Pierce's Golden Medical Discovery remains untried. It is not a cure all, nor will it perform miracles, but it has cured thousands of cases of consumption, in its earlier stages, where all other means had failed. Try it, and obtain a new lease of life.

Cane was the first base man. Abel was the first man struck out, after he had just made a sacrifice hit.

If afflicted with Sore Eyes, use Dr. Isaac Thompson's Eye Water. Druggists sell it. 25c.

See Antisell Piano advertisement.

### A TWENTY YEARS' EXPERIENCE.

770 BROADWAY, N. Y., March, 17, 1886.

I have been using ALLCOCK'S POROUS PLASTERS for 20 years, and found them one of the best of family medicines. Briefly summing up my experience, I say that when placed on the small of my back ALLCOCK'S PLASTERS fill the body with nervous energy, and thus cure fatigue, brain exhaustion, debility and kidney difficulties. For women and children I have found them invaluable. They never irritate the skin or cause the slightest pain, but cure sore throat, croupy coughs, colds, pains in side, back or chest, indigestion and bowel complaints. C. D. FREDRICKS.

The New York *Sun* deprecatingly remarks: Nobody has invented a contrivance whereby a man at the theatre can drop a cent in the slot and get a clove.

Many imitators, but no equal, has Dr. Sage's Catarrh Remedy.

Expansive hats are now being made for gentlemen who get full to the brim and want a hat that is not felt.

There are many valuable properties belonging to HOYT'S GERMAN COLOGNE. Its invigorating odor in the sick room is very acceptable and beneficial. Purchase the genuine.

### A WONDERFUL FOOD AND MEDICINE.

Known and used by Physicians all over the world. SCOTT'S EMULSION not only gives flesh and strength by virtue of its own nutritious properties, but creates an appetite for food that builds up the wasted body. "I have been using Scott's Emulsion for several years, and am pleased with its action. My patients say it is pleasant and palatable, and all grow stronger and gain flesh from the use of it. I use it in all cases of Wasting Diseases, and it is specially useful for children when nutrient medication is needed, as in Marasmus."—T. W. PIERCE, M. D., Knoxville, Ala.

ST. JACOBS OIL FOR TOOTHACHE.

CURES Promptly and Perfectly Toothache, Headache, Faceache, Swellings, Sore-Throat and Glands.

AT DRUGGISTS AND DEALERS.

OH! The Charles A. Vogeler Co., BALTIMORE, MD.

Diamond Vera-Cura FOR DYSPEPSIA.

A POSITIVE CURE FOR INDIGESTION AND ALL Stomach Troubles Arising Therefrom.

*Your Druggist or General Dealer will get Vera-Cura for you if not already in stock, or it will be sent by mail on receipt of 25 cts. (5 boxes $1.00) in stamps. Sample sent on receipt of 2-cent stamp.*

THE CHARLES A. VOGELER CO., Baltimore, Md. Sole Proprietors and Manufacturers.

ALWAYS TAKE HALL'S SARSAPARILLA, YELLOW DOCK AND Iodide of Potass.

It cures RHEUMATISM, NEURALGIA, Boils, Pimples, Scrofula, Gout, Catarrh, Tumors, Salt Rheum, and Mercurial Pains. It Purifies the Blood, Restores the Liver and Kidneys to healthy action, and makes the Complexion Bright and Clear.

J. R. GATES & CO., Proprietors 417 Sansome St San Francisco.

BIG G Cures in 1 TO 5 DAYS. Guaranteed not to cause Stricture. Prepared only by the Evans Chemical Co. Cincinnati, Ohio. Trade Mark

I prescribe and fully endorse Big G as the only specific for the certain cure of this disease. G. H. INGRAHAM, M. D., Amsterdam, N. Y.

We have sold Big G for many years, and it has given the best of satisfaction. D. R. DYCHE & CO., Chicago, Ill. $1.00. Sold by Druggists.

A GOOD BREAKFAST

Can be made from Mush and Fruit, with a cup of fine Coffee. We sell carloads of Cream Wheat, and one paper each of German, Ceraline Tribium, Egerman Food, Oat Flakes, Pearl Wheat, Breakfast Delight, Breakfast Gem, Manna, Germ Meal, Soujo and Cream Flake Wheat for 82 for trial. Some of them we have in bulk, and dried fruit we quote as follows:

| | |
|---|---|
| Sun Dried Peaches | old 3c, new 5c, 6c, 7c |
| Bleached and evaporated | 8c, 10c, 12 |
| Pealed | old 6c, new 12½c, 15c, 20c |
| Pears | dark 3c, bright 6c, 8c, 10c |
| Apricots | 6c, 8c, 10c, 15c |
| Nectarines, very fine | 8c, 10c, 12½c |
| Plums, pits in | 3c, 4c, 5c |
| Plums, pitted | 8c, 10c |
| Prunes, all grades | 5c, 7c, 8c |
| Apples, sun dried | 5c, 6c, 7c |
| Apples, Alexander | 7c, 8c, 10c |
| Raisins, common | 5c, 6c |
| Raisins, fine | 8½c, 10c |
| Blackberries | 14c, 15c |
| Currents | 8c, 10c |
| Cherries, pits in | 8c, 10c |
| Cherries, pitted | 25c, 30c |
| Dates | 8c, 10c |
| Figs, California | 4c, 5c, 6c |
| Grapes | 3c, 4c, 5c |

The lower price represents the cheaper grades, and quantity makes some difference. Raisins are usually 5, 10 and 20-pound boxes; other fruits, 10, 25 and 50-pound boxes, or as wanted. We are very careful to select as ordered. A full price list printed each month. Sample copy sent free. Send us your address. Smith's Cash Store, No 418 Front Street, San Francisco, Cal.

R. H. McDONALD PRES'T. F. V. McDONALD, CASHIER. ESTABLISHED 1863. Oldest Chartered Bank on the Pacific Coast. PACIFIC BANK. Capital Stock $1,000,000.00. SURPLUS $ 650,000.00. AV. RESOURCES $ 4,356,175.94.

Returning thanks for past favors, we respectfully ask a continuance of the same and solicit accounts of Individuals, Firms and Corporations.

## SCOTLAND'S SUNDAY.

### THE EDINBURGH SABBATH COMMENCES ON SATURDAY NIGHT.

**Everybody in Best Bib and Tucker Churchward Bound—Reeling Off Scriptures by the Yard—Stillness of the Streets—The Churches.**

One must come from the north into Edinburgh, either by Fife or Stirling. Come by Stirling by all means, for there is no castle in Europe that sits so proudly on its great rock as beautiful Stirling. But as you love your ease never go into the Scotch capital on a Sunday. Nowhere in all the world does religion cramp its devotees with so tight a fit as in Scotland. Perhaps the Japanese and the negroes are the only people who really enjoy their religion. In Germany no one seems to have any. In France, Spain and Italy they pray in the morning for fear of hell fire, and dance in the afternoon with joy because their duty is done. In England, they pray because their forefathers prayed and because it is one of the customs of the country; then they pass the rest of the day as pleasantly as they can without giving a bad example to the lower orders. In America—well, in America it can not be said that religion is allowed to interfere seriously with the comfort of any one's Sunday, and therefore to an American the full fledged, divinity hedged Scotch Sabbath is something of a curiosity.

The Sabbath had already commenced on the Saturday night, as we drove past the great shining hostelries on Prince's street to a cozy little hotel on St. Andrew's square. A bustling landlady and three buxom maids met us in the little vestibule, where a great bowl of the little, white, frosty narcissus made the air sweet and fresh.

THE ONLY FRIVOLITY.

Every one—man, woman and child—seems to love the little white flower, and to wear it as familiarly as they wear the buttons on their coats. But this was the only frivolity that could be seen in Edinburgh on this holy Saturday evening. For the Sabbath had already begun with preparation and prayer, and there was even a stillness in the streets such as is unwonted on a Saturday night in less holy communities.

Either the bustling landlady or one of the buxom maids left a little notice on the toilet table to the effect that services took place on Sunday, in the morning from 11 to 1, in the afternoon from 2:15 to 4, and in the evening from 6:30 to 8, and in some more devout chapels from 6 to 8:30. The great keeper of items will remember on the last day which one we chose. When we came into the bright, wide, clean streets next morning, all Edinburgh was there in its best bib and tucker, churchward bound. The curious part of it to an American eye was that the men went to church just as scrupulously as the women, for at home religion is for women alone.

There never was a Scotchman yet, from Donce David Deans forward or back, who could not reel off the Scriptures by the yard, and the flavor it gives their conversation makes it rich and strong. They looked to be a dogmatic and thoroughly convinced set of men as they plodded along through the Sabbath stillness of the classic city, composing themselves as they went for prayers. Mothers, wives and sisters were disposed to relax a little of their usual Sunday severity—for there were whole flocks of lads, from 14 to 18 years, who looked queerly enough in their short roundabout jackets, tall shiny hats and big white collars, in the groups. We heard that it was vacation time in the big public schools of Great Britain, and these would be merry lads were home for their holiday. Solemn little men they looked to be, with something faintly suggestive of Charles Dickens' boys in their mannish clothes, but they became common sights enough as we wandered farther south, and the utility coat of the American youth began to seem old fashioned instead.

STILLNESS OF THE STREETS.

The curious stillness of the streets finally began to explain itself, for every horse in Edinburgh was having his Sabbath in his comfortable stall, and not a wheel rolled in the great, clean, hilly streets. Even the tramways were silent and deserted—no one hears of a street car from the time they leave New York till they get back again—and every one who wanted to go to church went on foot.

There are plenty of churches for them all, though the traveler cares for little else in that line than historic St. Giles, whose sharp steeple loomed temptingly at us through the mild haze that hung over the classic city only to make it more beautiful.

We did find a godless young fellow standing by a hansom cab, down in Prince's street, that beautiful terrace thoroughfare which is the pride of auld Reekie, and we did rattle along in it through discomfort for a mile or two, with the vain hope of seeing some sights and not losing an entire day. But we soon perceived by the amazed faces of the multitude who arrested themselves and gazed in stony horror at the mere sight of us, that we were really shocking their honest prejudices. So we alighted, much discomfited and humiliated. We gave the cabman a sound rating—first, for driving his cab on a Sunday and breaking the Sabbath himself, and then for permitting us, who were strangers to the country, to break it over again.

But the cabby refused to feel badly; proclaimed himself English born, with no care for Scotch nonsense, and for his part had never seen any American who knew when Sunday came. This gratuitous reflection on the entire nation we passed coldly, and proceeded to do a little sight seeing on foot. There is a long dip, like the swing of a hammock, between the great castle on its impregnable hill at the one end, and the towers and monuments and column of the Calton hill on the other.—Betsy B. in San Francisco Argonaut.

### Springtime Sports in Texas.

A sheet with a hole in the center was fastened tightly to posts at either side, and through this hole a negro's head protruded, and was offered as a target for the boys to throw eggs. Five eggs were sold for 10 cents, and if the marksman hit Mr. Nigger three times out of five the marksman got $2. A good many eggs were thrown at Sambo's head, and several hit him, though he was allowed the privilege of dodging. Three men were connected with the show, and took in several spare dollars in Columbus.—Columbus Citizen.

### Swallowed Alive.

I got up a mouthful for a friend the other day after a bit the Union club once favored me with. On a bit of thin buttered toast two inches square I laid minced heart of celery, then a layer of mayonnaise made without sugar, and stuck on top a lot of oyster crabs, all alive and crawling. It is a curiosity, and the taste of it will haunt you for a while.—The Gourmet.

### The Future Newspaper.

Mr. James Parton, who is a good deal of a theorist, claims that the future newspaper will be without advertisements. The late Dr. Wood used to say that in twenty years we would come to hourly single page bulletins of condensed news. All prophets seem to concur in predicting the ultimate downfall of the blanket sheet.—The Journalist.

## IN A CEYLON HARBOR.

**A Superstition of the Natives of Trincomalie—Impressive Ceremony.**

Less than a mile beyond we came to the remaining fort of the place—Fort Frederick—a massive structure built by the Dutch in 1675 to resist land attacks from the interior, but now occupied by an armed garrison of English heavy artillery. Passing through the fort and out to the extreme point we came to a large, rugged rock rising precipitously out of the sea to a height of nearly 200 feet. It is known as Salmi rock, and the natives have a tradition that it is occupied by one of their evil deities, to propitiate whom their native Hindoo priest holds a sacred service on the rock twice a week. The Europeans here know of only one event that has occurred to make the rock memorable since the first Dutch settlers arrived here. The daughter of one of the old Dutch governors fell in love with a young lieutenant stationed on a man of war in the harbor. Her irascible old father opposed their union because the young lieutenant had nothing but his pay, and in order to separate them he ordered the man of war to sea on a long cruise. As the ship sailed out of the harbor the young girl went out to the dock, waved a last farewell to her lover, and then threw herself off into the sea and was drowned.

Fortunately, we got to the rock just as the service was about to begin. On a narrow ledge right over the sea stood the priest, a fine looking, gray headed old fellow, who was attired in the narrowest loin cloth I have yet seen. Near to him, but clear of the rock, were about fifty or sixty natives, the men attired very much like the priest, but the women resplendent in skirts of many colors and fairly loaded down with gold and silver ornaments in nose and ears, and on arms, ankles and toes.

The priest was fairly surrounded with a load of fruit, flowers, rice, and cocoanuts, the offerings of his congregation. He commenced the service by ringing a bell. Then holding a brass vessel, in which was a blazing fire, in his hand before him, and apparently invoking some spirit in it, he first threw some slips of paper over the face of the rock, his congregation facing the sea, clasping their hands in front of the body and engaging in prayer. After this was over the priest opened all the cocoanuts, emptying the milk into a brass vessel. Afterward he made a final prayer in regard to keeping the sea quiet so that vessels could swim on it, and then commenced to throw a part of the offerings into the sea; first some flowers, then a little rice, and finally some cocoanuts. How they were to reach the evil deity I could not learn. During the praying of the priests these poor natives looked every bit as earnest and devout as any of our congregations at home would look during divine service.—Cor. Baltimore Sun.

### Japanese on the Stairs.

There are many funny things in New York boarding houses, as most people know or believe. But I am told that among the most amusing incidents are those afforded by establishments where Japanese students are domiciled. Hundreds of these young men are in New York in attendance at the various academies and colleges, private and public. They have been sent here to get an "American" education, and most of them have taken the higher branches of mathematics and engineering. Few of them seem to care for the classical course, or for any language but English. The funny part of their life is learning to go up and down stairs. It seems that in most parts of Japan, particularly the rural regions, stairways are unknown. The houses, too, are seldom more than two stories high, and access to the upper floors is almost universally had by means of a ladder, up which the Japanese run like sailors. Hence, when these young men come to New York and are lodged in boarding houses their apartments are generally in the third or fourth story.

To reach their rooms they are compelled at first to go up very cautiously and with the aid of the balustrade. Some do not even hesitate to go up, cat fashion, on all fours, from step to step. The trouble is that they have not learned to balance the body so as to ascend and descend as we do. Our agility in going up and down stairs is really an acrobatic feat, but we are unconscious of it because we have practiced it from childhood. Now, the young Japanese are determined to perform this feat, and I am told that they often spend hours in the most persevering practice to acquire so simple an accomplishment. You can fancy what a ludicrous scene they make. They soon learn to go up the stairs. It's the coming down which gives them trouble. The decensus is not facilis in this case. The retrograde passus constitutes the labor and the opus. When the novice essays to come down stairs his companions watch and guy him as he totters in an effort to keep an upright position. When, for any reason, he is in a hurry, he has to do the sailor act and come down on all fours, stern foremost.—Brooklyn Citizen.

### Two Clever Counterfeits.

Did you ever hear of the maple sugar deception at the state fair in Detroit a few years ago? No? Well, it seems some fellow up north made a wager that he could manufacture a substitute for maple sugar that would deceive the judges into awarding him the first premium for pure maple sugar. He did so, producing the article from cheap grades of brown sugar bought in this city and manipulated under the eyes of people cognizant of the bet. He carried his certificate of highest merit home and proudly hung it over the mantelpiece in his best room, a tribute to science, which had scored a victory over the honest granger.

I think the man who succeeded in producing a counterfeit oyster which deceived the epicures of Paris deserves the palm. Never heard of it? Now, that's strange—thought everybody knew it. Yes, a man over in France—Bordeaux, I think—is manufacturing an oyster now which is rapidly supplanting the natural bivalve. They are colored by a mineral wash and fastened to genuine shells with glue, which dries to the semblance of the cartilage that binds the natural oyster to his shell.—Boston Herald.

### New Form of Bank Notes.

A new departure is being taken by one of the principal Scotch banks regarding the form of its notes. It is well known that the risk of forgery, especially by photography, is now greater than formerly, and the Commercial bank of Scotland has met this difficulty by concentrating in its new issue all possible guarantees against imitation by that means. The notes are printed from steel plate on back and front in a combination of colors.—The Stockholder.

### Machine Politics.

"Do you know, my friend," said a very solemn political individual, "that when you silently drop that snow white ballot from your fingers it floats down in rhythmic grace and settles the destinies of a nation?" "No, sir; I don't," replied the impecunious voter; "but I know when I drop it into the box it settles my bargain with the boss o' this 'ere ward."—Hartford Post.

Under a new edict just promulgated in Japan criminals are not to be executed singly. When there is one he must wait until there is another to keep him company.

## THE ENGLISH QUEEN.

### A DISTINGUISHED AMERICAN LADY'S FRANK OPINION OF VICTORIA.

**What One Woman Thinks of Squeezing Pennies Out of Poor School Children to Build a Monument—Bread, Not Stone, Needed.**

One of the most distinguished women of America is in England on a visit to a countrywoman. The house of her hostess was recently invaded by a local female British magnate, who almost demanded a considerable money contribution toward a celebration of the fiftieth year of Queen Victoria's reign. The female British magnate was stricken dumb in amazement at the manner in which her request was refused, and the subsequent outpouring of American opinion on the whole jubilee business. Our distinguished American, in a letter to a relative in this city, described the incident and freed her mind upon the subject in such vigorous English, and with such unrestrained feeling, that we are glad to give that portion of the letter:

"The idea of the women of England doing something to celebrate the jubilee year was started purely for charitable purposes, and they were greatly chagrined when the queen announced her wish to use the money for a statue to Prince Albert. So general has been the dissatisfaction that her man Ponsonby came out with a card saying that the queen intended to thus use only £1,500—$7,500.

THE POOR OF ENGLAND.

"The poor of England were never worse off than they are to-day. While Victoria for fifty years has been penuriously saving a fabulous fortune for herself and worthless progeny, the people have been slowly, but surely, growing poorer and poorer, until statesmen are at their wits' ends to know what to do. Neither the queen nor Prince Albert ever suggested one plan for the benefit of the British people. He was a ridiculously weak man, if history represents him fairly. He never uttered one grand sentiment nor performed one generous deed worth remembering. The general feeling among the people is that the queen should celebrate her year of jubilee by doing some grand thing for her subjects.

"I do not agree with you in your jubilee feeling one iota. The idea originated among sycophants and flunkies. But wherever it originated, the queen's foot at once should have been placed on penny contributions. This penny dodge of the English government and English upper class society has been tried in so many ways in order to get money out of the poor that to me it is inexpressibly contemptible. When the English established free schools, as they said, on the American plan they slipped a mean, cunning little by-law within their system, that every child must come to school with a penny in his hand each morning. A humane teacher told me she was obliged to take the penny, but she usually gave the child a roll of bread, with a basket of which she provided herself on her way to school. Think of a child with his little stomach empty passing a bake shop with a penny in his hand! They tell me that many of the children are too hungry to learn a letter, and generous teachers feed them as much as they can from their private purses.

USE FOR JUBILEE PENNIES.

"Now a good queen should know something of her system of education. And right here would be a good use to make of jubilee pennies, filched from the poor. If I was queen of England I would rescind that by law and establish a bread fund for hungry school children. As an American queen I should be so ashamed I would not know where to put my head if committees were scouring all our towns and cities, our tenement houses and work shops, our farms on the vast prairies, begging our miners, farmers, boatmen, the servants in our homes, to raise a penny fund for me to build a monument to my husband, who was a thousand times more worthy of it than Prince Albert is! I should think pennies from a starving people for such a purpose would make Prince Albert turn in his grave. It makes me turn up the whites of my eyes in the flesh, and why should it not in the spirit make him turn entirely over?

"Art is all very well for those whose stomachs are lined with nutritious food; but the multitude would prefer bread to monuments. If I were cold and hungry I would rather have a hot dinner than sit on a frozen curbstone looking at the progenitorial Prince Albert in Parian marble. But if you, my dear, wish to cultivate the æsthetic cold, hungry, naked, without a chip over their heads, I, from my material standpoint, cry out, 'Give them shelter, food, clothing and an American stove, even though the world never shall see a monument to another pauper German princeling.' I think the English, Scotch and Irish laborers would generally flock to my standard, while you might go junketing with the queen on the coast of France in her royal yacht, and to the French circus and pat the ear of the baby elephant, as all the great London metropolitan journals have excitedly reported her doing. How lovely that was in her!"—New York Sun.

### Electrical Theory and Practice.

In the minds of the so called "practical" workmen of the day there is a sharp line drawn between theory and practice. "Practice" to this workman means all that is worthy in, and all the existent facts of, his profession. For theory he has superlative contempt, while the theorist underrates the capabilities and importance of the practical workman, and, unused to work himself, he cannot see the imperfections in his own elaborate theories. Between these two extremes is the workman who, while recognizing the strict thralldom of practical working, yet appreciates that it is through the study of theory that science advances. This workman endeavors to apply theory to practice, and it is by his expenditure of hand work and mind work that invention comes. To those in electrical pursuits this combination of the practical with the theoretical is particularly necessary. From the nature of the subject grave accidents might occur through the errors of the workman who, disdaining the teachings of theory, goes blindly to work.—Electrical World.

### At Home and Abroad.

Commercial Traveler (in Chicago hotel)—I say, waiter, this pate de foie gras is mighty poor stuff, and this canvasback is more of a mossback than anything else. (To brother traveler)—I'll be glad when I get home, Jim, where I can get something to eat.

Same Commercial Traveler (at home, to his wife)—I say, Mrs. Gasbag, that butcher swindled you on this liver; it's tougher'n tripe.—New York Sun.

### Inoculation in China.

From the report of the hospital for Chinese in Shanghai we learn that in China smallpox inoculation is still in vogue. For this purpose a rag is moistened with the variolous matter and placed in the nostril. That the disease is prevalent in China is easily understood after this explanation.—Public Opinion.

According to records kept for many years London fogs are becoming less frequent every year.

## MEDICAL FALLACIES.

### A SILLY NOTION IN REGARD TO INACTION OF THE LIVER.

**A Warning Against "Spring Medicine," "Liver Invigorators" and "Blood Purifiers"—Quinine as a Friend and as a Foe—Its Abuse.**

It is a popular error that certain seasons call for the taking of certain forms of medicine, even when there seems to be no change from health. Thus, "a good spring medicine" is now called for by many otherwise sensible people as regularly as our ancestors asked their physicians for their annual or quarterly blood letting. The "spring medicine" is "something to purify the blood," and this means an active cathartic, as a rule. The purity of the blood is probably not affected by any such drugs. It becomes "impure" by reason of some special poison, like that of ague, typhoid fever, measles, smallpox or the like, entering the life current and increasing therein, or by reason of the lungs, kidneys or skin not properly acting, as a rule.

It is possible for many disturbances of digestion and other derangements of health to follow inaction of the bowels, but cathartics do not remedy the trouble. Their action is almost certain to increase the torpor of the intestines and add to the evil they were designed to remedy. The enormous evils occasioned by the careless use of such medicines cannot be overestimated. They occasion a large proportion of the ill health prevalent in any community. If proper attention is given to regulating the exercise, food and drink, together with methodical habits relative to the calls of nature, such drugs will be seldom, if ever, called for.

THE "TORPID LIVER" BUGBEAR.

Another silly notion that is widely prevalent is that relative to inaction of the liver. The term "torpid liver" is in every one's mouth, and is held to account for every bad feeling, whether it be due to excess in eating or drinking, late hours, lack of muscular exercise, excitement over bad ventures on the market or other form of dissipation. The liver is quite an important organ, and has much to do with the secondary processes of digestion—those which go on after the stomach and pancreas have done their work—but it is innocent of most of the sins laid at its door. The bile is manufactured in large amounts daily, but we know positively of but few uses to which it is put in the body, and of still fewer drugs that are able to increase the daily output. If we were certain that we could, at will, stimulate this huge gland to secure more bile, it is very uncertain that any benefit would result from "arousing it from its torpor."

This may be rank heresy, according to many old practitioners, but it is truth. According to some recent and trustworthy authorities, the continuous loss of all the bile secreted does no harm. As the liver strains out of the blood, that contains the crude results of the first digestion of food, many hurtful and even poisonous materials, which are sent back again in the bile to be worked over before they are sent into the circulation, it is possible to conceive that the total loss of all bile secreted would not be anything to be regretted. It might necessitate some increase in the amount of food taken, say, by a few ounces, but the bile loser would not suffer at all seriously.

THE "BITTERS" FALLACY.

It is proven beyond dispute that such drugs as calomel and podophyllin do not increase the flow of bile to any appreciable extent. That they act beneficially in many instances cannot be questioned, but it is not by "waking up a torpid liver." Such "spring medicines," "liver invigorators" and "blood purifiers" as contain rhubarb, aloes, colocynth and the like, produce or prolong constipation and all its attendant evils. Those composed of senna, tamarinds, buckthorn and "mandrake" (May apple), are not so bad, but should be avoided as useless or injurious, especially if their use is to be protracted. Simple bitters are useful during the process of recovery after such diseases as the ordinary fevers, and when the appetite is poor without any apparent cause. But no one should persist long in their use. They will finally disorder digestion and do more harm than good, especially if there is an appreciable quantity of alcohol used in their manufacture. Such remedies as quassia, gentian, "boneset" and columbo. They ought not to be taken unless there is a serious loss of appetite, such as to hinder the taking of the necessary quantity of food. Probably the best form in which to employ simple bitters is in pill or infusion (tea), of which the old fashioned "boneset" tea is a good example.

A FRIEND AND A FOE.

Quinine and other preparations of Peruvian bark are among the most valuable medicines yet known. Wherever malarial diseases prevail to a serious extent they are almost indispensible to the preservation of health. Without them the lower Mississippi valley and the alluvial "bottoms" of all tropical and subtropical regions would not be habitable by the white race. They reduce the temperature in typhoid and some other fevers not of malarial origin. They are often curative in neuralgia, whether it arises from malaria or some obscure cause not of that nature. In diseases showing a tendency to periodical return quinine is of vast service, and this mark of manifest periodicity is what shows the sphere of its probable usefulness. As the intermittency of symptoms call for quinine, as a rule, in the same way, it should be given intermittently. If it is given day after day and week after week, it produces harmful disturbances, and becomes useless as a medicine in cases for which it would be suitable under other circumstances. It causes an irritable condition of both mind and nerves, besides interfering with the digestion.

The nervous, sleepless, hysterical condition due to prolonged use of quinine is known to every sufferer from the "quinine habit" and his associates. It is too costly and valuable a remedy to be uselessly wasted, to say nothing of its deleterious effects. The bad reputation it has attached to it in some localities has not been earned by its legitimate employment, but is due to the abuse of it in the hands of the ignorant or careless.—Cor. Globe-Democrat.

### Insect Endurance of Cold.

It is an error to suppose that severe winters are destructive of insect life. According to Mr. McLachlan, an English entomologist, larvæ may be frozen until as brittle as rotten sticks, in which condition they can scarcely be said to live, but on the return of warm weather they revive quite uninjured by their freezing. It is a noteworthy fact that butterflies and humble bees have been almost as close to the North Pole as man has ever approached.—Arkansaw Traveler.

### Vaccination Among the Workmen.

Vaccination is to be enforced among all the workmen employed on the coming Paris exhibition. Each man will be vaccinated as soon as engaged, and the government will not only pay for the necessary medical treatment, but will continue the man's wages should his arm become bad and prevent him from working.—Chicago Times.

It is exactly 107 years since the first Sunday newspaper was published.

## THE NATION'S CAPITOL.

### THE STRUCTURE WILL BE THE MOST BEAUTIFUL IN THE WORLD.

**The First Corner Stone of a Public Structure in Washington Laid Nearly a Century Ago—Grandeur of the Capitol Building.**

The marble terrace and grand staircase which are to complete the imposing western approach to the capitol of the United States, with the return of the balmy days of spring presents once more a scene of busy energy among the scores of workmen, who with crane and trowel are placing the huge blocks of polished marble and granite in their assigned places on the master builder's plan. A procession of carts simultaneously carry away the excavated earth as the foundation of the extension of the gigantic work goes on. When the French engineer, under instructions from President Washington in the summer of 1790, made a reconnoisance of the gracefully undulating lands in the forks of the Potomac and the Anacostia as the site of the proposed seat of government, he pointed out on his rude field sketch a conspicuous eminence, then called Jenkins' hill, as the most proper site for "the federal house where congress should meet." Three years later Washington laid the corner stone of the original edifice, which is now little more than the foundation for the beautifully proportioned iron dome towering over the balustraded marble walls and Corinthian porticoes which to-day inclose the four acres of frescoed and gilded ante-rooms, corridors, committee rooms, and great halls occupied by the business of legislation.

The pure white marble walls and surmounting balustrade, with pedestals for statues in the future, which have supplanted the primitived turfed slopes of the terraces on the north and south sides of the edifice, have been finished. The western portion from the angles to the grand staircase is nearly so, which leaves nothing to consummate this imposing piece of architectural beauty and solidity but the grand staircase itself. This will be far toward completion before the close of the present working season.

NEARLY A CENTURY.

Though but five years less than a century have elapsed since the corner stone of the president's house, the first of the public buildings in the federal city, was laid, Washington, the capital of the United States, can boast of the loftiest structure extant reared by man in the marble obelisk to the memory of "The Father of His Country." It has the largest and the finest legislative and government buildings on the globe. It has more equestrian statues and as a rule of equal merit than all the other capitals of the world combined, and its open air and in door statues number upward of a hundred. Its national museum are the greatest and finest in the economical, ethnological, and medical affairs of mankind of any in existence. Its new library building will eclipse in beauty all structures of the kind now in existence. Its new observatory will surpass all others. The extension of its water supply will exceed the great aqueducts of Rome. The latest triumph in the world of wonders of the American capital will be this grand staircase. Nothing of equal magnitude can be found in the great capitals which date back to the infancy of nations. The grand terrace at Dresden, the famous gardens of Italy, the staircase of Sans Souci at Pottsdam, the vatican at Rome, or the terrace and staircase at Central park, New York, do not even approach it in dimensions, architectural symmetry, and elaboration of detail and finish.

Some idea of the grandeur of this work may be formed by a reference to its dimensions. The north terrace, of Maryland, and south terrace, of Massachusetts, white marbles, and each 304 feet in length and 20 feet high, each terminating on the east in a massive marble block and paved approach to the port cocheres respectively of the senate and house porticoes of the eastern facade of the capitol. The terrace walls are capped with a beautiful marble balustrade and rail, with blockings serving at intervals for superb bronze lamp posts and pedestals for statues, of which there would be ten on each side. The walls of the western terrace and grand staircase are 918 feet in length or aggregating a richly paved way over 1,500 feet long extending at the base of the loftly Corinthian porticoes of the northern, western, and southern fronts of the vast structure. Highly polished Aberdeen granite parterres break the terrace platform into two levels.

THE GRAND STAIRCASE.

The grand staircase projects 112 feet and consists of 4 double flights of steps 44 and 48 feet wide, with 4 landings. The distance between the two flights of steps is 129 feet. At the foot of the staircase, facing on the semicircular walk, fronts Story's heroic bronze statue of Chief Justice John Marshall. In the rear will be a beautiful fountain, and in face of the connecting wall forming the middle landing will be niches for ivy. From this platform will be five arches forming an arcaded way into the sub-basement of the building. At each landing will be imposing cheek blocks, which will support ornate bronze lamps and statues. The steps will end on a broad platform of 129 feet deep and will be connected by a balustrade over the arcaded front beneath and blockings for statues and lamps.

The western central portico, which projects here, will be extended in symmetrical proportions to the approach. The entire exterior of the original capitol, which is now the center and of gray festoons painted white, will be faced with marble to correspond with the senate and house extensions. In order to utilize the space within the terrace walls ninety-two vaults have been constructed, and twenty-eight large apartments suitable for occupancy of committees will front on the open spaces toward the building. The terrace walls are constructed of alternate blocks of marble, five by eight feet and nineteen inches high and one to three feet thick, fine rubbed cut work, and all resting on a base of Pennsylvania granite similarly treated. The completion of the work will cost upward of $1,000,000.

Looking from the upward platform, which begins at the base of the western central portico of the capitol, the eye rests in receding vision upon the polished white marble descents of the staircase itself, the paved platform at the foot with the Marshall statue, the sweeping lawn inclosed by granite copings, which form the broad paved walks which make their exits on the right at the beautiful statue of peace, which stands at the head of Pennsylvania avenue, and on the left at the site of the new statue of President Garfield, which will be unveiled on the 12th of next month, and which looks down Maryland avenue, while between these two broad thoroughfares sweeps the mall with the glass domes of the botanic garden, the pointed pavilions of the national museum, the byzantine towers of the Smithsonian institution, the rigid mansards of the agricultural department, and the dizzy pyramidal apex of the Washington monument.—Washington Cor. Philadelphia Times.

By mixing chloride of zinc with paper pulp during its manufacture, the paper is made so tough that it can be used for making boxes, combs, roofing and boots.

## EXPERT CRACKSMEN.

### HOW PROFESSIONAL CROOKS PLY THEIR NEFARIOUS VOCATION.

**Safe Breakers Who Outwit the Genius of Skilled Mechanics—Peculiar Methods of Burglars—A Dangerous Tool—Watching for the Watchman.**

To adopt the well known thief taker's expression, the "professional" crook is far from being the tough and rowdy usually pictured by the agitated fancy of the alarmed citizen. The most successful burglars are not of the Sykes class, so graphically depicted by Dickens' fertile pen. They are intelligent and not infrequently ingenious mechanics who would command the highest wages in honest pursuits, and those members of a gang whose part of a "job" it is to reconnoiter the ground have the bearing, appearance and manners of well-to-do business men whose presence around banks and great mercantile establishments would not excite the least suspicion. The practical safe breaker studies the latest mechanical inventions in his line with as much intelligence and application as the safe builder, and experience teaches that the cracksman frequently outwits the inventive genius of the legitimate mechanic. While the work of the burglar must of course be adapted to the circumstances of each particular job, there are certain peculiarities of noted cracksmen by means of which experienced detectives are enabled to say with almost absolute certainty who perpetrated the crime. There are burglars who would never enter the house by any other way than the scuttle in the roof, choosing an adjacent vacant or partly occupied building as a starting point; others will sneak into a house and keep themselves concealed until the time for their work has arrived; still others prefer entrance by the basement or some rear window not sufficiently secured with grating. Doors which are merely bolted from the inside offer not the slighest obstacle to the professional burglar. A simple and noiseless trial will at once show him the location of the bolt. With a fine bit he bores a hole not more than an eighth or a sixth of an inch near the bolt, pushes through a loop of thin but strong silk or fishing line, and by means of a pliable steel tap, usually watch spring material, he knows how to fasten the loop around the knob of the bolt. A quick pull is sufficient to move the bolt in the slot. This operation is for fine work in hotels or fashionable residences.

The safe breaker does not associate with those who "crack" a store for the purpose of stealing bulky goods. He represents the aristocracy of the profession, and uses force only when it is absolutely necessary. Combinations of safes have often been learned by this class of crooks through obtaining access to the premises after business hours, removing the dial of the combinations, fitting a sheet of tinfoil over the latter, and replacing the dial. The legitimate opening or closing of the safe makes the impressions of letters or numbers on the soft foil sought to be obtained by the burglar. At a second visit the dial is readily removed, and for the expert one glance at the foil is sufficient to apply the combination, which opens the safe without force. Disordering the combination after the robbery, so that the safe cannot be opened again for hours, is a favorite method of the burglar to gain time for escape. If force is required the mechanical burglar has quite a formidable array of tools—his "kit," as he calls it. The complete kit contains an air pump, putty, powder or dynamite, fuse, sectional jimmy, steel drills, diamond drills, copper and steel faced sledges, lamp and blow pipe, jackscrew, wedges, syringe, brace with box slide, feed screw drill, steel punches, small bellows, skeleton keys, nippers, dark lantern, twine, and screw eyes.

The most dangerous of this outfit is the second power in mechanics—the screw. The method used in breaking open the safe in Henry W. King & Co.'s establishment, for instance, is a practical illustration of the power of the screw. In this case the burglars first rigged a brace against the vault door. Then they drilled a hole through the door near the dial, cut a thread into the hole, and inserted what is termed a female screw. Into the latter they fitted the jackscrews, provided with a handle large and strong enough for two men to work at the turning. The jackscrew went in until it struck the combination. Then the tremendous force of the formidable burglars' tool came into play. The entire combination was broken off. In some cases the force is not directed against the combination, but against the back plates of the safe door, usually the weakest part of the entire structure. Something must "give" when the screw comes into play, and either the back or the front plate is forced out of its position sufficiently to admit the sectional jimmy, which, together with the wedge, or "widdy," finishes the work of bodily tearing asunder the most improved "burglar proof" safe.

To ascertain whether there is a watchman on the premises to be visited the professional burglar has a very simple but effective stratagem. He forces a piece of thinly shaved whalebone between the doors of all exits and the outer casings of the doors. If the whalebone is still in its place in the morning at the usual hour of opening for business the door has not been opened by any one. A watchman in leaving the premises in the morning would naturally cause the whalebone to spring to the ground. The use of twine to the burglar is just as important as the telegraph is to the public. One of the first steps taken by the burglar after effecting an entrance is to fasten one end of twine to something near the safe, and run the other end out to the outside man, who watches, to give the signal if it is safe to keep on working, to keep quiet for a time, or to come out at once. The outsider scatters beans or sand along the sidewalk for some distance near the place of operation so that no person approaching can walk without being heard.—Chicago Times.

### Take a Superior Subject.

Few adult minds retain accurately considerable masses of isolated facts, and it is commonly observed that minds which are good at that are seldom the best minds. Why do we try to make children do what we do not try to do ourselves? Instead of mastering one subject before going to another, it is almost invariably wise to go on to a superior subject before the inferior has been mastered—mastery being a very rare thing. On the mastery theory, how much new reading or thinking should we adults do? Instead of reviewing arithmetic, study algebra; for algebra will illustrate arithmetic and supply many examples of arithmetical processes. Instead of rereading a familiar story, read a new one; it will be vastly more interesting and the common words will all recur—the common words being by far the most valuable ones. Instead of reviewing the physical geography of North America, study South America. There, too, the pupil will find mountain chains, water sheds, high plateaux, broad plains, great streams and isothermal lines. The really profitable time to review a subject is not when we have just finished it, but when we have used it in studying other subjects and have seen its relations to other subjects and what it is good for.—Atlantic Monthly.

## AMONG THE ALPS.

### AN AMERICAN TOURIST WRITES A LETTER FROM SCHAFFHAUSEN.

**The Peculiar Dance Called "La Francaise"—A Short Ride Into Germany. Solitude of the Black Forest—A Party of Woodchoppers—An Interior.**

In former years our little American colony in Schaffhausen numbered in all six souls, and, to use an excusable bull, two of these Americans were Belgians, having resided in New York some years. Now there is not even a shadow of a colony here, and beautiful as the tours about the environs are, they are quite abandoned by our countrymen. The average traveler arrives at Schaffhausen, is immediately rushed into an omnibus, driven over to Neuhausen, sees the falls of the Rhine, and then away again. Not so your correspondent, for I quietly settled down at the Hotel de la Poste, a quiet hostelry in the city itself, slipped into my smoking jacket and slippers, and was soon chatting with mine host, Buehlman, just as if the seventeen years since I last rested here were yesterday.

"Ah!" said my genial host, "you are just in time, Herr Elson. To-morrow evening the castle, the old Munoth, is to be the scene of a reception, given by the Stadtsrath to the singing societies of Canton Appenzell, and I will see that you are specially invited." And invited I was, and the following evening found me seated at the round table within the esplanade of the castle, while the Appenzellers made merry music about me. Then dancing was in order, and although I am not a dancer myself I will try to describe a peculiar dance they call "La Francaise," which appeared very pretty to me as I sat and looked on. The sets were formed as for our ordinary German at home, but after a few bars of music by the orchestra I saw it was to be quite different. Everybody is the pink of politeness. "Mademoiselle, may I have the honor?" the hat is raised, the lady courtesies very low, and in fact more quiet politeness is displayed than one meets at a similar Parisian gathering.

At length all is ready. After the customary salute the music falls into a veritable minuet, as stately almost as the one of the French Louis. Follow it with me, dear reader, in fancy, at least. The old minuet of our ancestors, forward and salute, the gentleman holding the lady's hand with a quite indescribable grace as high as the shoulder, then across and back again; but while I am gazing dreamily on this scene, what do I hear? Why, to be sure, one of Strauss' ravishing waltzes, and presto! the whole is changed from the sober to the gay, and I see nothing but the rosy, healthy faces turning about, while the tails of the gentlemen's dress coats stand at an angle of forty-five degrees, so fast do these South Germans and Swiss waltz. And so the dance ends.

But I have promised, gentle reader, to take you into the country, so let us take this train for a short ride into Germany (for you must remember Schaffhausen lies on the German side of the Rhine) and we soon come to the village of Krotzingen, on the extreme southern edge of the Black Forest. It is justly called the Black Forest, for the tall pines and cedars grow close together, making night of noon under their shadows. Taking a carriage, or, more properly, a sort of light cart, I directed my driver to strike by the most unfrequented road into the forest. In fifteen minutes we were in a solitude so still that it was oppressive. Not a sound save that peculiar swaying noise of the pines that only a Bret Harte can describe, and an occasional cry of a bird very similar to our catbird; otherwise all is majestically still.

I order the driver to halt, and while he is opening the little hamper and spreading our frugal luncheon I take my compass and make a little inroad into the woods. I hear a brook trickling over the rocks, and as I approach a frightened hare scampers through the brush. Poor creature! I am as much startled as he, for my head is full of such stories as the "Iron Ring," and I half look to meet one of the old robber chiefs and his band, that a couple of centuries ago made this forest a dangerous place, and whose spirits, some of the more ignorant peasants believe, are still to be met with by the belated traveler. But hark! I hear my guide calling, so back I go to luncheon. The wise fellow has put our bottle of Macon into the brook to cool, and we sit down together in the best of fellowship to our little luncheon in the Black Forest. At length all is finished and we drive along, and by a circuitous route reach the village of Staufen. It is a more populous place than I expected to find here. It has its own little hotel, called "The Wild Man," and adjoining it a brewery, a little row of stores, and, in fact, is quite a city in the woods.

But we plunge into the woods again and presently come to a party of woodchoppers, their axes ringing merrily, but only against such trees as the Herr Forstmeister has given permission to be cut, and still farther along I hear the dripping of water on a mill wheel, and here we enter the little village of Untermunsterthal, a veritable Black Forest dorf. I knock at the doorpost of a house, for the door stands open, and a man with a heavy pair of sabots appears, and I ask permission to come in and see his house. He is naturally surprised that any one should want to see his house, but accords me permission and I enter. Against the wall stands a large porcelain stove, at least eight feet high, while just outside is his pile of brush and wood for the winter. His cattle shed is just to the rear, and his chamber above, reached by a short ladder. The odor of the cattle pervades everything, so I make my adieus and we are soon on our way to Neukirch, where I take the train back again to Schaffhausen, which I reach not a bit fatigued with my beautiful journey.

# INYO INDEPENDENT.

County Official Paper.

C. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY SATURDAY.

INDEPENDENCE, CAL.

SATURDAY DECEMBER 1.....1888

It seems almost improbable to say that a library fairly representing approximately two thousand of the most eminent authors of the world, of all lands and all times, can really be placed within the reach of ordinary homes. Yet this is what is accomplished by Alden's Cyclopedia of Universal Literature, volume VII of which is on our table. The work, when completed, is to comprise from fifteen to twenty volumes, which are in large type, and really beautiful and excellent in all mechanical qualities, and yet sold at the phenominally low price of 50 cents per volume for cloth and 60 cents for half Morocco bindings; even from these prices large reductions are made to early purchasers and to clubs. Volume VIII contains many notable names from the literatue of all nations and ages. The publisher will send a specimen volume to any one on receipt of price, allowing the privilege to return if not wanted. All lovers of good books should at least see the work. The publisher's catalogue is sent free to any applicant. JOHN B. ALDEN, Publisher, 393 Pearl St., New York, or 216 Clark St., Chicago.

MISCELLANEOUS.

## Proposals.

Proposals for building a bridge across Bishop Creek at the point known as "Matlick's Ford."

NOTICE IS HEREBY GIVEN THAT IN pursuance of an order of the Board of Supervisors of the County of Inyo, State of California, made the 16th day of November, 1888, the undersigned Clerk of said Board will receive sealed proposals for materials and labor to be used in constructing a bridge across Bishop Creek at a point known as "Matlick's Ford" in accordance with the plans and specifications now on file in the office of the County Clerk, which are now subject to inspection until Tuesday, February 5, 1889, at 12 o'clock noon of said day; bids to be opened between the hours of 2 and 4 o'clock p. m. of said day.

SPECIFICATIONS.

Abutments to be built of stone cut square and laid close without mortar, base of said abutments to be not less than four [4] feet wide, fourteen [14] feet long, two [2] feet at the top, by fourteen [14] feet long at top and four [4] feet high; low water mark foundation to be let down at least twelve [12] inches below the bed of said creek. Stringers to be 12x12 inches, 30 feet long (hewn or sawed) five of said stringers to be used and to reach the entire span of 27 feet between the abutments, resting on timbers 8x16, 14 feet long, which are to be firmly bedded on top of abutments. Truss frames on outside stringers to be hewn or sawed 8x10 inches and to be constructed as per sketch marked "A" (in plans). The rods supporting truss to be not less than one [1] inch iron running from top of braces through outside stringer and through cross sills 8x12 inches, 14 feet long, underneath of stringers, securely threaded on bottom of same, the foot of braces to be bolted through stringers with one [1] inch bolts. Planking to be 3x10 inches, 14 feet long, securely spiked on to the stringers. All material to be of good quality and to be built in a substantial and workmanlike manner. The person or persons to whom said contract may be awarded shall give a good and sufficient bond in double the amount of such contract price, to be approved by the Board of Supervisors, for the faithful performance of said contract. Proposals must be endorsed "Proposals for building bridge across Bishop Creek at the point known as "Rowan's Ford." The right is reserved to reject any and all bids. P. H. MACK,
Clerk of the Board of Supervisors.

$85 GOLD WATCH FREE

To introduce our Household Journal we will for a short time only, sell the above watch at the price named below. Not a toy but a first class watch in every respect. Fully warranted for five years. Heavy Solid Gold Hunting Cases, Elegant and Magnificent, Both ladies' and gents' sizes with works and cases of equal value ONE PERSON in each locality can secure one FREE. How is this possible? We answer—we want one person in each locality, to keep in their homes, and show to those who call, a complete line of our valuable and very useful HOUSEHOLD SAMPLES. These samples, as well as the watch, we send free, and after you have kept them in your home for 2 months and shown them to those who may have called they become your own property; it is possible to make this great offer, sending the $85.00 GOLD watch and COSTLY samples free, as the showing of the samples in any locality, always results in a large trade for us, after our samples have been in a locality for a month or two we usually get from $200 to $5,000 in trade from the surrounding country. This the most wonderful offer ever known, is made in order that our samples may be placed at once where they can be seen, all over America. Write at once, and make sure of the chance. Remember it will be hardly any trouble for you to show the samples to those who may call at your home and your reward will be most satisfactory. A postal card only which to write us costs but 1 cent and after you know all, if you do not care to go further, why no harm is done. But if you do send your address at once, you can secure FREE one of the best gold watches in the world and our large line of COSTLY SAMPLES. We pay all express, freight, etc. Address GEO. STINSON & CO., Box 919, PORTLAND, MAINE.

### AN INDIAN LOVE SONG.

His winter home the bear forsakes,
The red deer swims the shining lakes,
Up foaming falls the salmon leaps,
The wild sheep halts on dizzy steeps,
The swans are northward flying.
With laughing voice the rivers run,
Their billows flashing in the sun;
It is the moon of sprouting grass,
A thousand warm sweet breezes pass,
Through lofty pine tops sighing.
With bounding steps the antelope
Springs lightly down the mountain slope;
To verdant plains the bison hies,
The eagle mounts the morning skies,
And all the birds are mating.
With life and joy all things are bright,
Come forth, my love! my soul's delight,
Thy wigwam's folds throw wide apart,
For thee, oh dear and tender heart,
Thy lover true is waiting.
—E. M. Allen in American Magazine.

### A Chinese Opium Story.

Since the introduction of opium into China millions and tens of millions have given themselves up to its use, its victims being found in all the ranks and conditions of life, among the old, the middle aged, the young, and even children. But a case of an infant becoming a victim to its pernicious influence has just come to our knowledge. A man and his wife had been in the habit of taking opium for years, and one of their chief delights was in indulging themselves over the pipe in each other's company, each taking alternate whiffs. One day the woman gave birth to a boy, and all the household was in an ecstatic state of joyfulness. But before long the baby began to show signs of illness, and although a physician was sent for they could not discover the cause of its symptoms. Every effort was made to save the child, but he only grew worse and worse until his parents gave him up for lost.

In despair they took their pipe to solace themselves, and behold! as they puffed at the pipe the smoke was wafted to the child's nostrils, and, giving a sneeze, he instantly revived and began to cry. Upon inhaling more of the smoke he changed his crying into laughing and became exceedingly lively. After that he was all right as long as he inhaled the smoke at regular periods of the day. One day, however, his parents neglected to give him the accustomed dose of smoke and before they were aware he died.—Chicago Times.

### He Revolts Against Cruelty.

It is rather in others and for others that the modern civilized man dreads pain. He finds it harder to know that other men are suffering the pains of cold or hunger in Kansas or Ireland or India; or that "prisoners of poverty" are working for pittances in the great cities; or that laboring men are driven to work sixteen hours a day; or that criminals are tortured or miscreated in the chain gang; or that "politicals" are driven to insanity in the Russian state prisons. He resents and punishes cruelty to animals where his great-grandfather, perhaps, thought nothing of sending a slave to the whipping post. He revolts even against harshness in just punishment, and desires to alleviate some of the horrors of hanging. If he ignores a case of cruelty, it is from lack of omniscience; let him know about it, and the world shall know his feelings about it. Wilberforce and Copley might go on for years telling Englishmen of the horrors of the middle passage and of all the villainies of the slave trade; and still the slave ships sailed out from Liverpool, and the slave trade was represented in parliament. Cruelty in more recent times lives by stealth and blushes to find itself famous in the newspaper pillory.—The Century.

### Search for Old Watches.

There are a great many funny things attending the rise of the "Jenkinses." I mean those people who have advanced in material wealth without adding a whit to their literary or social position. They are bragging of an ancestry they never had, and are at a loss to establish themselves as members of the old families. Just now there is a search for old gold watches, which will be paraded as family heirlooms, handed down by this or that distinguished Roundhead, or Mayflower pilgrim. The old Johnson watches, made on Church street, Liverpool, are among those most eagerly sought by the man who wants to trade money for lineage. Few of them are left, and in Baltimore an especial market has been established, and large sums are paid for them. Money is a great deal plentier than blue blood, and the exchange is willingly made by those who have lately acquired the shekels.—Watchmaker in Globe-Democrat.

### The Pig Headed Passenger.

A correspondent wants to know why railway companies do not arrange to have all passengers go out at the front end and enter at the rear end of a car. He doesn't know the perversity of the average passenger, or he wouldn't ask this question. If a railway company should try to enforce such a rule it would meet with the pig headed opposition of nearly half the passengers in every car. Americans, individually, are a bright people, but in a crowd they act as though they were not.—New York Tribune.

### The Gothic Alphabet Going.

Those who are obliged frequently to refer to German books are especially interested in the movement to introduce the Roman in place of the Gothic alphabet. Since 1866 the society which is agitating this matter has nearly doubled in numbers. On its lists are now over 4,436 names, including members of all professions, teachers, physicians, booksellers and merchants. In 1887, out of 6,913 books on artistic, scientific, mercantile and industrial subjects, 5,316 were printed with the Roman letters.—Science.

### LOVE HATH BETRAYED THEE.

Weep in the silence, oh heart, my heart,
Love hath wearied of thee!
And thou in the gloom of the shadow of doom
Forever alone must be.
Weep in the silence, oh heart, my heart,
Love hath betrayed thee!

Break in the silence, oh heart, my heart,
Love hath hidden his face!
Hath deafened his ear till he cannot hear;
Hath left thee to thy disgrace.
Break in the silence, oh heart, my heart,
Love hath betrayed thee!

Die in the silence, oh heart, my heart,
Love hath broken his word!
Thy pleading prayer beats the empty air
Like the bruised wings of a bird.
Die in the silence, oh heart, my heart,
Love hath betrayed thee!
—Susie M. Best.

### The Garden of America.

Bearing on the proposition of Maj Powell to reclaim the Colorado desert, for which congress has already made a preliminary appropriation, is an article by Joaquin Miller on "The North American Fifty." He argues that the region instead of being a desert is in reality exceedingly fertile. "These ruins of Arizona are older than history—as old as the oldest ruins on the Nile of Egypt. The region then was densely populated. No allurements of gold, nothing but the generous soil and the genial climate built up cities here that rivaled in extent those of Egypt. If then these primitive people made a garden of this land, where we now insist on locating a desert, can we not do something with our improved methods?" Very clearly this region was once the garden of America, and it is reclaimable. Miller says he never ate finer bananas than those grown near Fort Yuma. His article is full of enthusiasm and poetry, but also of facts and sound sense as well. No doubt he is right in calling it the North American Nile and every way more interesting for its antiquities, as well as natural grandeurs, than the Nile of Africa.—Globe-Democrat.

Working Asses ATTENTION!
We are now prepared to furnish all classes with employment at home, the whole of the time or for their spare moments. Business new, light and profitable. Persons of either sex easily earn from 50 cents to $5.00 per evening, and a proportional sum by devoting all their time to the business. Boys and girls earn nearly as much as men. That all who see this may send their address, and test the business, we make this offer: To such as are not well satisfied we will send one dollar to pay for the trouble of writing. Full particulars and outfit free. Address GEORGE STINSON & CO., Portland, Maine.

FIRST-CLASS RESORT.

Deep SEA WONDERS exist in thousands of forms, but are surpassed by the marvels of invention. Those who are in need of profitable work that can be done while living at home should at once send their address to Hallet and Co., Portland, Maine, and receive free full information how either sex, of all ages, can earn from $5 to $25 per day and upwards wherever they live. You are started free. Capital not required. None have made over $50 in a single day. All succeed.

$50 If you think of expending fifty or one hundred dollars in advertising send us a copy of your advertisement and we will tell you (free of charge), what will be the best possible investment for you to make. Send 10 cents for our 178 page pamphlet. Address, GEO. P. ROWELL & CO'S. NEWSPAPER ADVERTISING BUREAU 10 SPRUCE STREET, NEW YORK.

Invention has revolutionized the world during the last half century. Not least among the wonders of inventive progress is a method and system of work that can be performed all over the country without separating the workers from their homes. Without any one can do the work either sex, young or old; no especial ability required. Capital not needed; you are started free. Cut this out and return to us, and we will send you free, something of great value and importance to you, that will start you in business, which will bring you in more money right away than anything else in the world. GRAND GIFT FREE. Address TRUE & Co., Augusta, Maine.

INDEPENDENCE, CAL.

SATURDAY, DECEMBER 1.....1888

## BORN.

LACEY—At Camp Independence, November 25, 1888, to Mr. and Mrs. J. W. Lacey, a son.

## DIED.

WARNES—at Independence, November 3 1888, Mrs. Mary S. Warnes, aged 76 years 5 months and 15 days.

The funeral will take place to-day (Saturday) at 11 o'clock a. m. from the M. E. Church to the I. O. O. F. and Masonic Cemetery. Friends and the public respectfully invited to attend.

Tom Bastian is in a very critical state of health.

At Reno hay sells for eight dollars per ton in the stack.

A terrible storm raged in the Eastern States last Monday.

Miss Keller left town last Saturday for San Francisco.

Miss Addie Lewis has gone to San Francisco to stay some months.

Religious service was held at the M. E. Church on Thanksgiving day.

Bridge builders see proposal for building two bridges near Bishop Creek.

Messrs. G. Sanger and J. C. Crocker have gone to Kern county on business.

Electric power for running mills at Virginia City is declared to be a complete success.

Mr. J. W. Robinson, of Carson, arrived at Independence last Monday. He is interested in land here.

All the men came down from Rawson's saw mill at the end of last week. The mountains are full of snow and nothing can be done till spring.

It is claimed by Chairman Quay of the Republican National Committee that the Republicans will have a majority of nine in the Lower House of Congress.

Thomas & Hill, of Big Pine, give notice that they have formed a co-partnership for the purpose of doing business in general merchandise. See their notice published this week.

Rev. E. McEvers will preach next Sunday at Independence at 11 a. m. and at Lone Pine at 7 p. m. Sunday School at Independence immediately after the morning service.

A case of diptheria is reported from Bishop Creek, the sufferer being the little daughter of Mr. and Mrs. Robert O'Neil. In nearly all cases the origen of this dread disease can be traced to the use of impure water.

The Virginia City *Enterprise* is authority for the statement that Adolf Sutro says the Sutro tunnel will be extended west under Mount Davidson. He says he work will be commenced as soon as the affairs of the Company are satisfactorily arranged.

The incoming county officers propose to give a complimentary ball to the outgoing officers on New Years Eve. Of course everybody will be welcome. As most of the county officers were reelected the ball may be considered a pleasant way the officers will take of thanking their numerous friends.

The crowds of people coming into California to spend the winter are greater this year than ever. The storms that have been raging in the East lately make people come here to escape their fury and live in a land where changes of season bring but a change of delightful conditions.

California raisins are driving Spanish raisins out of the market. Our raisins are of finer quality and are prepared for the market in a superior way. The home demand is practically without limit. A few years hence Owens Valley will be sending trainloads of raisins to market that will surpass all others for quality.

Thanksgiving day passed pleasantly and quietly at Independence. There were dinner parties at a number of places where friends met and enjoyed pleasant social intercourse. Doors and windows were left open and the bright sunshine made the rooms glow with light and warmth. This is an agreeable contrast to the cold and storm usually prevalent in the East at this season.

Mrs. Mary S. Warnes died at Independence yesterday (Friday) morning at three o'clock. The deceased was born at Philadelphia June 15, 1812. Her maiden name was Mary S. Parker. She was married to Dr. Joseph Q. Warnes at New Orleans, March 14, 1845. Her husband died and she came to California in 1873 to live with her daughter, Mrs. Parker, at Independence. Decease was sister Mrs. I. P. Yaney and Mrs. S. G. Sneden, of Bishop Creek.

On last Friday a preliminary examination was begun before I. P. Yaney, Justice of Peace, at Bishop Creek, in the case of John Dunlap. The charge was assault with a deadly weapon with intent to commit murder. The defendant had beaten Dr. Middleton with a heavy steel rasp. The examination occupied four days and was finished Tuesday evening. District Attorney Forbes appeared for the People and S. G. Sneden for the defendant. Justice Yaney reserved his decision.

### Mono County Grand Jury Report

The report of the Grand Jury of Mono county states that the total amount of the assessment roll for 1888 is $987,544. Complaint is made of the excessive salary paid to the County Physician. The report charges that the amount paid certain road districts is far in excess of the amount of work done. A demand is made to the Board of Supervisors that the collection of toll be suspended on the Bodie and Big meadows toll road till the same shall be improved, as it is now in a neglected and dangerous state. Warm praise is bestowed upon all the county officers for the manner in which their duties have been performed and for the excellent condition of their books and offices. They also recommend that the Supervisors offer a reward of fifty dollars for information convicting any white person of selling or giving whisky to Indians; also a reward of twenty-five dollars for convicting a Chinaman of the same offense.

### Big Feast.

A big meeting of Indians was held at Camp Independence during the week. Many Indians came long distances to attend the meeting. Trains of horses brought packs filled with chickens, rabbits, dried grasshoppers, pinenuts, acorns and other delicacies, including choice strips of dried horse and mule. It was a big feast. There were several famous dancers present but the favorite appeared to be Jim Wallace, Chief of the Indians about Independence. Large numbers of white people from Independence and neighborhood went to see the performance. Jim and an old Chief from the Deep Spring country very politely danced for the amusement of the visitors. The dancers were entirely naked except a covering of feathers about the loins and a tiara of eagle plumes on the head. When eagles are scarce turkeys, or even buzzards supply the necessary ornamentation. Jim is long and slender and in the ecstasy of the dance, with arms and legs in rapid motion, looked like a huge spider. Old Deep Spring is very fat, short and thick. The flesh hangs upon him in folds like an ill fitting garment, and shakes to that degree when he dances that an onlooker might fancy he heard the bones rattling inside. There could not be any doubt that the Indians were quite as happy as any companies that assemble in fashionable circles in great cities.

### Discount on Silver.

To show how the discount on silver affects mining operations, the record of a single mining company for a single year may be taken. The Granite Mountain Co. of Montana received from the sales of their silver, during the past fiscal year, 94.48 cents per ounce. The difference between the average price for which they sold their product and the price at which the Government sells it to the people has been 34.8 cents per ounce and on the 3,162,972 ounces produced and shipped by this one company, their compulsory contributions to native and foreign monometalists has been $1,100,000 for the fiscal year. The president of the Company calls attention to this very forcibly in his annual report. The free coinage of silver would give silver producers 36 per cent. more than they now receive, and which now goes to swell the Treasury surplus. The Treasury of the United States pays for silver at the market value of bullion, say at the rate of 95 cents for a pure ounce, at which rate 371¼ grains of pure silver in a standard dollar costs the Treasury about 73½ cents, from which it will be seen that the Treasury makes, say 26½ cents on every dollar coined, or a profit of over 36 per cent. out of the people.—*Mining & Scientific Press.*

### To The Ladies.

Having laid in one of the finest assortments of Fall Dress Goods and Trimmings ever brought to Inyo county, I have arranged to supply a long felt want by securing a means for having the goods made up in the latest fashion. By an agreement with a leading dress maker of San Francisco ladies can now select their goods, have their measure taken under an improved system, and choose from the latest fashion plates—which we will always have on hand—such styles as they may prefer. The cost for making will be but nominal. Satisfaction in fit and make up guaranteed. No cost for sending the goods to the dressmaker and returning finished dress to the purchaser. Respectfully,

NATHAN RHINE.

### Grand Jury

The following is the list of Grand Jurors to appear at Independence on Tuesday, December 11th, at 10 o'clock a. m.

| | |
|---|---|
| Anthony, Chas. | Bourland, J. L. |
| McCrosky, W. G. Jr. | Dyer, J. A. |
| Kelsoe, Thos. | Smith, Ambrose |
| Kistert, John | Fitzgerald, F. |
| McDonald, A. C. | Shaw, James |
| Reiper, J. C. Jr. | Jones, James |
| Billows, Horace | McKenzie, J. A. |
| Cline, A. | Stevens, A. C. |
| Otis, David | Newton, S. J. |
| Miller, J. R | Rogers, J. W. |
| Greenley, W. A | Lucas, John |
| Lubkin, John | Levy, Henry |
| Ford, R. W. | Malone, Henry |
| Cashbough, A. A. | Enos, W. S. |
| German, J. S. | Barlow, John |

San Bernardino papers say that the town swarms with ruffians of the worst and most dangerous character. During the day merchants have to guard the goods at their doors to prevent their being carried off by the blackguards and thieves, and at night it is dangerous for respectable persons to be abroad in the streets. Such a state of things would warrant the suspicion that San Bernardino is cursed with worthless public officers. The shooting down of a few ruffians would work a pleasant change for the town.

### CERTIFICATE OF CO PARTNERSHIP.

STATE OF CALIFORNIA, }
County of Inyo. }

We, the undersigned, do hereby certify that we are partners transacting business in the town of Big Pine, in the County of Inyo, under the firm name and style of Thomas & Hill, that the full names of all the members of such partnership are Robert Walker Thomas and Thomas Wheaton Hill, and that the places of our respective residences are set opposite our respective names hereto subscribed.

ROBERT WALKER THOMAS, Big Pine.
THOMAS WHEATON HILL, Big Pine.

For witness whereof we have hereunto set our hands this 27th day of November, 1888.

STATE OF CALIFORNIA, }
County of Inyo. }

On this 27th day of November in the year one thousand eight hundred and eighty eight before me, P. H. Mack, County Clerk and ex-officio Clerk of the Superior Court in and for the said County of Inyo, personally appeared Robert Walker Thomas and Thomas Wheaton Hill, known to me to be the same persons described in whose name I subscribed to and who executed the within instrument, and they acknowledged to me that they executed the same.

IN WITNESS WHEREOF, I have hereunto set my hand and affixed the seal of said Court, the day and year in this Certificate first above written.

[SEAL] P. H. MACK.
County Clerk and ex-officio Clerk of the Superior Court.

[ENDORSED.]

Filed November 28, 1888.

P. H. MACK,
County Clerk.

### DESERT LAND FINAL PROOF.

D. E. No. 246.

UNITED STATES LAND OFFICE, }
INDEPENDENCE, CAL. }
Nov. 14, 1888. }

Notice is hereby given that James R. Moffett, of Lone Pine, Inyo county, Cal., has filed notice of intention to make proof on his desert land claim No. 246, for the S W ¼ of S W ¼ Sec 2, S ½ of S E ¼ sec 3, N E ¼ of N E ¼ sec 10, N W ¼ of N W ¼ Sec 11, Tp 15 S. R 35 E, M D M., before the Register and Receiver of the office at Independence, Cal., on Monday, the 24th day of December, 1888.

He names the following witnesses to prove the complete irrigation and reclamation of said land: Albert W. Simonson, John J. Stewart, William D. Eakin and Reuben C. Spear, all of Lone Pine, Inyo county, California.

JOHN W. P. LAIRD, Register.

### ORDINANCE NO 27.

THE BOARD OF SUPERVISORS OF THE County of Inyo, State of California, do ordain as follows:

The following rules and regulations are hereby adopted for the government of the County Hospital of the County of Inyo, State of California, and for the preservation of health within the said county of Inyo.

SECTION 1. All persons on their admission into the Hospital shall deliver to the steward all moneys, articles of value, baggage, etc., except such necessary articles as may be required for immediate use; and the steward shall label them properly and keep them until such time as they may be required, giving the owner a memorandum of the same, and such persons must bathe and change clothes immediately on admission into such hospital, and thereafter on Saturday of each and every week.

SECTION 2. All patients who are able to be up must rise in time and be ready for breakfast; after which they must vacate the wards as far as possible during the day, that the beds furniture and floor of the wards may be cleaned. Every patient able to do so is required to come to the dining room for meals.

SECTION 3. Each and every inmate will be required at all times to perform any duty assigned to them, either as nurse, or assisting about the house, and a refusal to comply will cause an immediate discharge, such duties to be assigned by the steward, or by his orders.

SECTION 4. All employees are required to use the utmost kindness in dealing with the inmates, and under no circumstances will abuse of any kind be tolerated.

SECTION 5. No liquors of any kind shall be allowed to be used by any one, except by order of the physician in charge.

SECTION 6. Card playing, gambling, loud or profane talking, vulgarity or disorderly conduct of any kind is positively forbidden.

SECTION 7. No inmate will be allowed to leave the premises without permission.

SECTION 8. Begging from visitors is positively forbidden; also, smoking in the wards without permission; and every inmate is required to use every effort to promote cleanliness.

SECTION 9. Any inmate who shall introduce ardent spirits, cause any nuisance or disturb the house by quarrelling or fighting, or behave immorally or disrespectfully, in any manner, or circulate any book, print or pamphlet of an indecent or immoral character, shall be immediately discharged.

SECTION 10. All patients who are able to be up are required to keep their beds and bedside tables in a neat and orderly condition.

SECTION 11. Visitors must not make presents to patients without permission from the steward. This rule has particular reference to fruits, pastry, confectionery and liquors.

SECTION 12. Patients are required to retire at 9 o'clock p. m., at which time all lights unless otherwise permitted, are to be extinguished. No unnecessary conversation will be permitted in the ward. No candles or other extra lights will be allowed in the ward without the consent of the steward.

SECTION 13. All violations of the above rules by the inmates must be reported to the physician to be dealt with by him or to be reported by him to the Board of Supervisors, at his option.

SECTION 14. The steward shall be subject to the orders of the physician in charge, and any violation of such orders shall be reported by said physician to the Board of Supervisors.

SECTION 15. For the purpose of carrying the provisions of this ordinance into effect the person in charge of said Hospital shall be considered to be the Steward.

SECTION 16. Patients can only be discharged by order of the physician in charge, and the said physician must keep a record of all such discharges, together with the date thereof.

SECTION 17. The Clerk must cause fifty copies of this ordinance to be printed on stiff card board for posting in convenient places, to be designated by the physician in charge of said Hospital.

SECTION 18. This Ordinance shall take effect and be in force on and after twenty-five days from the date of its passage.

SECTION 19. This Ordinance shall be published, with the names of the Board of Supervisors voting for and against the same, in the INYO INDEPENDENT, a newspaper published in said Inyo county, at least two weeks, said publication to be made for said time and before the expiration of said twenty-five days.

J. D. HARGER,
Chairman of the Board of Supervisors of Inyo county, State of California.

Attest: P. H. MACK,
Clerk of the Board of Supervisors.

The above and foregoing Ordinance No. 27 was duly passed enacted and ordained by the Board of Supervisors of Inyo county, State of California, at a regular meeting of said Board on the 16th day of November, 1888, by the following vote:

Ayes—J. D. Harger, J. R. Eldred and E. Robinson.
Noes—

J. D. HARGER,
Chairman of the Board of Supervisors.
Attest: P. H. MACK,
Clerk of the Board of Supervisors.

[Endorsed.]

ORDINANCE NO. 27.

Filed and recorded November 16th, 1888, in Ordinance Book "B" page 58 et seq.

P. H. MACK,
Clerk.

### ASSESSMENT NOTICE.

INYO MARBLE COMPANY OF CALIFORNIA—Location of principal place of business, San Francisco, California; location of works Inyo county, California.

Notice is hereby given that at a meeting of the Board of Directors, held on the 2d day of October, 1888, an assessment (No. 4) of Five (5) cents per share was levied upon the capital stock of the corporation, payable immediately in United States gold coin, to the Secretary, at the office of the Company, San Francisco, California.

Any stock upon which this assessment shall remain unpaid on the 31 day of November, 1888, will be delinquent and advertised for sale at public auction, and unless payment is made before will be sold on MONDAY, the 31 day of December, 1888, to pay the delinquent assessment, together with cost of advertising and expenses of sale. By order of the Board of Directors. GEORGE W. LUCE, Sec.

Office No. 205 Front St., San Francisco, Cal.

Young or old, married or single, sick or well, should read. Sent sealed, by DR. WHITTIER, St. Louis, Mo. CUT OUT THIS LIST AND SEND WITH ORDER.

## "DOCTORING OLD TIME."

**A Striking Picture—A Revival of Old Time Simplicities.**

In one of Harper's issues is given a very fine illustration of Roberts' celebrated painting, known as "Doctoring Old Time." It represents a typical old-timer, with his bellows, blowing the dust from an ancient clock, with its cords and weights carefully secured. One of these clocks in this generation is appreciated only as a rare relic.

The suggestive name, "Doctoring Old Time," brings to our mind another version of the title, used for another purpose—"Old Time Doctoring."

We learn, through a reliable source, that one of the enterprising proprietary medicine firms of the country, has been for years investigating the formulas and medical preparations used in the beginning of this century, and even before, with a view of ascertaining why people in our great-grandfathers' time enjoyed a health and physical vigor so seldom found in the present generation. They now think they have secured the secret or secrets. They find that the prevailing opinion that then existed, that "Nature has a remedy for every existing disorder," was true, and acting under this belief, our grandparents used the common herbs and plants. Continual trespass upon the forest domain, has made these herbs less abundant and has driven them further from civilization, until they have been discarded, as remedial agents because of the difficulty of obtaining them.

H. H. Warner, proprietor of Warner's safe cure and founder of the Warner observatory, Rochester, N. Y., has been pressing investigations in this direction, into the annals of old family histories, until he has secured some very valuable formulas, from which his firm is now preparing medicines, to be sold by all druggists.

They will, we learn, be known under the general title of "Warner's Log Cabin remedies." Among these medicines will be a "sarsaparilla," for the blood and liver, "Log Cabin hops and buchu remedy," for the stomach, etc., "Log Cabin cough and consumption remedy," "Log Cabin hair tonic," "Log Cabin extract," for internal and external use, and an old valuable discovery for catarrh, called "Log Cabin rose cream." Among the list is also a "Log Cabin plaster," and a "Log Cabin liver pill."

From the number of remedies, it will be seen that they do not propose to cure all diseases with one preparation. It is believed by many that with these remedies a new era is to dawn upon suffering humanity and that the close of the nineteenth century will see these roots and herbs, as compounded under the title of Warner's Log Cabin remedies, as popular as they were at its beginning. Although they come in the form of proprietary medicines, yet they will be none the less welcome, for suffering humanity has become tired of modern doctoring and the public has great confidence in any remedies put up by the firm of which H. H. Warner is the head. The people have become suspicious of the effects of doctoring with poisonous drugs. Few realize the injurious effects following the prescriptions of many modern physicians. These effects of poisonous drugs, already prominent, will become more pronounced in coming generations. Therefore we can cordially wish the old-fashioned new remedies the best of success.

## OF GENERAL INTEREST.

—French economy is very evident in the marketing of fowls. Not only half birds can be purchased, but legs, wings and breasts are offered separately. The carcass is used for soup, and even the blood is sold.

—The golden youth of the day can buy himself a nightshirt of China silk either white or delicately tinted for the modest sum of twenty-five dollars, or if he can content himself with linen or lawn the garment may come as low as seven to eight dollars.

—Mother Hubbard, it has been decided, had a saintly origin. She is identified with St. Hubert, the patron of dogs and the chase, who is represented in a long robe, a veritable Mother Hubbard gown, and who had successfully appealed to the imagination of the story teller.

## A LUCKY ITHACAN.

**Alonzo C. Edwards Draws $5,000 in the Louisiana State Lottery.**

Learning this morning that there was no doubt but what Alonzo C. Edwards was the lucky Ithacan who held one-twentieth of ticket No. 31,809 which drew the second capital prize of $100,000 in the drawing of the Louisiana State Lottery held on the 7th inst., our reporter at noon to-day, called at his residence to learn the truth of the matter.

Mr. Edwards is a hard-working mason who has lived in Ithaca twenty years, and has no real estate of his own and rents the south end of the one-story, unpainted house, marked No. 79 on Linn street. Mr. Edwards was just returning from his work as our reporter reached the house and he was asked if he was the lucky holder of the above-mentioned ticket, and he smilingly said that he was. "Have you received the money?" asked the reporter.

"If seeing is believing, you can look at the draft that I received this morning," and Mr. Edwards took from his pocket, a draft on New York which was as good as gold, the face value being $4,995, five dollars being deducted for cost of draft.

"I suppose," said the reporter, "that this money comes very convenient at this time."

"Indeed it does. I was a little surprised when I saw in the list of prizes that I had drawn $5,000. I paid a dollar for the ticket; though I have purchased several this year. I mean now to have a snug little home of my own, and make my family as comfortable as possible. There are five of us, myself, wife and three little girls," and he pointed to his family group who stood near the window, all of whom looked very happy at the good fortune that had fallen to them.

"Shall you try your luck again?" asked the reporter.

"Oh, yes," said Mr. Edwards, "I shall try my luck occasionally, but shall not let my good fortune run away with me. The best part of it is I can now have a home of my own," and Mr. Edwards handed over the draft to his wife which he said he should have cashed at the First National Bank, and the money placed where it would be safe.—*Ithaca (N. Y.) Journal*, August 27.

# Allan Quatermain.

**By H. RIDER HAGGARD.**

AUTHOR OF "KING SOLOMON'S MINES," "SHE," "JESS," "THE WITCH'S HEAD," ETC.

(CONTINUED.)

Instantly her bright brow darkened to a frown.

"Sorais," she said, with a little stamp of the foot, "ah, but Sorais!"

Sir Henry hastened to turn the subject.

"You will soon be about and all right again now, old fellow," he said.

I shook my head and laughed.

"Don't deceive yourselves," I said. "I may be about for a little, but I shall never be all right again. I am a dying man, Curtis. I may die slow, but die I must. Do you know, I have been spitting blood all the morning? I tell you there is something working away into my lung; I can feel it. There, don't look distressed; I have had my day, and am ready to go. Give me the mirror, will you? I want to look at myself."

He made some excuse, but I saw through it and insisted, and at last he handed me one of the disks of polished silver, set in a wooden frame like a hand screen, which serve as looking glasses in Zu-Vendis. I looked and put it down.

"Ah," I said quietly, "I thought so, and you talk of my getting all right!" I did not like to let them see how shocked I really was at my own appearance. My grizzled stubby hair was turned snow white, and my yellow face was shrunk like an aged woman's and had two deep purple rings painted beneath the eyes.

Here Nyleptha began to cry, and Sir Henry again turned the subject, telling me that the artists had taken a cast of the dead body of old Umslopogaas, and that a great statue in black marble was to be erected of him in the act of splitting the sacred stone, which was to be matched by another statue in white marble of myself and the horse Daylight as he appeared when, at the termination of that wild ride, he sank beneath me in the court yard of the palace. I have since seen these statues, which, at the time of writing this, six months after the battle, are nearly finished; and very beautiful they are, especially that of Umslopogaas, which is exactly like him. As for that of myself, it is good, but they have idealized my ugly face a little, which is perhaps as well, seeing that thousands of people will probably look at in the centuries to come, and it is not pleasant to look at ugly things.

Then they told me that Umslopogaas' last wish had been carried out, and that instead of being cremated, as I shall be, after the usual custom here, he had been tied up Zulu fashion, with his knees beneath his chin, and, having been wrapped in a thin sheet of beaten gold, entombed in a hole hollowed out of the masonry of the semicircular space at the top of the stair he defended so splendidly, which faces, as far as we can judge, almost exactly toward Zululand. There he sits and will sit forever, for they embalmed him with spices and put him in an air tight stone coffer, keeping his grim watch beneath the spot he held alone against a multitude; and the people say that at night his ghost rises and stands shaking the phantom of Inkosi kaas at phantom foes. Certainly they fear during the dark hours to pass the place where the hero is buried.

### CHAPTER XXIII.

**I HAVE SPOKEN.**

It was a week after Nyleptha's visit, when I had begun to get about a little in the middle of the day, that a message came to me from Sir Henry to say that Sorais would be brought before them in the queen's first antechamber at midday, and requested my attendance if possible. Accordingly greatly drawn by curiosity to see this unhappy woman once more, I made shift, with the help of that kind little fellow Alphonse, who is a perfect treasure to me, and that of another waiting man, to reach the antechamber. I got there indeed, before anybody else except a few of the great court officials who had been bidden to be present, but I had scarcely seated myself before Sorais was brought in by a party of guards, looking as beautiful and defiant as ever, but with a worn expression on her proud face. She was, as usual, dressed in her royal kaross emblazoned with the emblem of the Sun, and in her right hand she still held the toy spear of silver. A pang of admiration and pity went through me as I looked at her, and struggling to my feet I bowed deeply, at the same time expressing my sorrow that I was not able, owing to my condition, to remain standing before her.

She colored a little and then laughed bitterly. "Thou dost forget, Macumazahn," she said, "I am no more a queen, save in blood. I am an outcast and a prisoner, one whom all men should scorn, and none show deference to."

"At least," I replied, "thou art still a lady, and therefore one to whom deference is due. Also thou art in an evil case, and therefore it is doubly due."

"Ah!" she answered, with a little laugh, "thou dost forget that I would have wrapped thee in a sheet of gold and hung thee to the angel's trumpet at the topmost pinnacle of the temple."

"No," I answered, "I assure thee I forgot it not, indeed I often thought of it when it seemed to me that the battle of the Pass was turning against us, but the trumpet is there, and I am still here, though perchance not for long, so why talk of it now?"

"Ah!" she went on, "the battle, the battle! Oh, would that I were once more a queen, if only for one little hour, and I would take such a vengeance on those accursed jackals who deserted me in my need, that it should only be spoken of in whispers, those women, those pigeon hearted half breeds who suffered themselves to be overcome," and she choked in her wrath.

"Ay, and that little coward beside thee," she went on, pointing at Alphonse with the silver spear, whereat he looked very uncomfortable, "he escaped and betrayed my plans. I tried to make a general of him, telling the soldiers it was Bougwan, and to scourge valor into him" (here Alphonse shivered at some unhappy recollection), "but it was of no avail. He had beneath a banner in my tent and thus overheard all my plans. I would that I had slain him, but, alas! I held my hand. And thou, Macumazahn, I have heard of what thou didst, thou art a brave man and hast a loyal heart. And the black one, too, ah, he was a man. I fain would have seen him hurl Nasta from the stairway."

"Thou art a strange woman, Sorais," I said. "I pray thee now plead with the Queen Nyleptha, that perchance she may show mercy unto thee."

She laughed out loud. "I plead for mercy!" she said, and at that moment the queen entered, accompanied by Sir Henry and Good, and took her seat with an impassive face. As for poor Good, he looked intensely ill at ease.

"Greeting, Sorais!" said Nyleptha, after a short pause. "Thou hast rent the kingdom like a rag, thou hast put thousands of my people to the sword, thou hast twice basely plotted to destroy my life by murder, thou hast sworn to slay my lord and his companions and to hurl me from the stairway. What hast thou to say why thou shouldst not die? Speak, O Sorais!"

"Methinks my sister, the queen, hath forgotten the chief count of the indictment," answered Sorais, in her slow musical tones. "It runs thus: 'Thou didst strive to win the love of my lord Incubu.' It is for this crime that my sister will slay me, not because I levied war. It is perhaps happy for thee, Nyleptha, that I fixed my mind upon his love too late.

"Listen," she went on, raising her voice, "I have naught to say save that I would I had won instead of lost. Do thou with me even as thou wilt, O queen, and let my lord the king there" (pointing to Sir Henry), "for now will he be king, carry out the sentence, as it is meet he should, for as he is the beginning of the evil, let him also be the end," and she drew herself up and shot one angry glance at him from her deep fringed eyes, and then began to toy with her spear.

Sir Henry bent toward Nyleptha and whispered something that I could not catch, and then the queen spoke.

"Sorais, ever have I been a good sister to thee. When our father died, and there was much talk in the land as to whether thou shouldst sit upon the throne with me, I being the elder, I gave my voice for thee and said, 'Nay, let her sit. She is twin with me, we were born at a birth; wherefore should the one be preferred before the other?' And so has it ever been 'twixt thee and me, my sister. But now thou knowest in what sort thou hast repaid me, but I have prevailed, and thy life is forfeit, Sorais. And yet art thou my sister, born at a birth with me, and we played together when we were little and loved each other much, and at night we slept in the same cot with our arms each around the other's neck, and therefore even now does my heart go out to thee, Sorais.

"But not for that would I spare thy life, for thy offense has been too heavy; it doth drag down the wide wings of my mercy even to the ground. Also, while thou dost live the land will never be at peace.

"Yet shalt thou not die, Sorais, because my dear lord here hath begged thy life of me as a boon; therefore as a boon and as a marriage gift give I it to him, to do with even as he wills, knowing that, though thou dost love him, he loves thee not, Sorais, for all thy beauty. Nay, though thou art lovely as the night in all her stars, O Lady of the Night, yet is it me his wife whom he loves, and not thee, and therefore do I give thy life to him."

Sorais flushed up to her eyes and said nothing, and I do not think that I ever saw a man look more miserable than did Sir Henry at that moment. Somehow Nyleptha's way of putting the thing, though true and forcible enough, was not altogether pleasant.

"I understood," stammered Curtis, looking at Good—"I understood that you were attached—eh—attached to—to the Queen Sorais. I am—eh—not aware what the—in short, the state of your feelings may be just now; but if they happen to be that way inclined, it has struck me that—in short, it might put a satisfactory end to an unpleasant business. The lady also has ample private estates, where I am sure she would be at liberty to live unmolested so far as we are concerned, eh, Nyleptha? Of course I only suggest."

"So far as I am concerned," said Good, coloring up, "I am quite willing to forget the past; and if the Lady of the Night thinks me worth having I will marry her to-morrow, or when she likes, and try to make her a good husband."

All eyes were now turned to Sorais, who stood with that same slow smile upon her beautiful face that I had noted the first time that I ever saw her. She paused a little while and cleared her throat, and then thrice she courtesied low, once to Nyleptha, once to Curtis and once to Good, and began to speak in measured tones.

"I thank thee, most gracious queen and sister, for the loving kindness thou hast shown me from my youth up, and especially in that thou has been pleased to give my person and my fate as a gift to the Lord Incubu—the king that is to be. May prosperity, peace and plenty deck the life path of one so merciful and so tender, even as flowers do. Long mayest thou reign, O great and glorious queen, and hold thy husband's love in both thy hands, and many be the sons and daughters of thy beauty. And I thank thee, my Lord Incubu—the king that is to be—I thank thee a thousand times in that thou hast been pleased to accept that gracious gift, and to pass it on to thy comrade in arms and in adventure, the Lord Bougwan. Surely the act is worthy of thy greatness, my Lord Incubu. And now lastly I thank thee also, my Lord Bougwan, who in thy turn hast deigned to accept me and my poor beauty. I thank thee a thousand times, and I will add that thou art a good and honest man, and I put my hand upon my heart and swear that I would that I could say thee 'yea.' And now that I have rendered thanks to all in turn"—and again she smiled—"I will add one short word.

"Little can ye understand of me, Nyleptha and my lords, if ye know not that for me there is no middle path, that I scorn your pity and hate ye for it, that I cast off your forgiveness as though it were a serpent's sting, and that standing here, betrayed, deserted, insulted and alone, I yet triumph over ye, mock ye and defy ye, one and all, and thus I answer ye," and then of a sudden, before anybody guessed what she intended to do, she drove the little silver spear she carried in her hand into her side with such a strong and steady aim that the keen point projected through her back, and she fell prone upon the pavement.

Nyleptha shrieked, and poor Good almost fainted at the sight, while the rest of us rushed toward her. But Sorais of the Night lifted herself upon her hand and for a moment fixed her glorious eyes intently on Curtis's face, as though there were some message in the glance, then dropped her head and sighed, and with a sob her dark yet splendid spirit passed.

Well, they gave her a royal funeral, and there was an end of her.

* * * * * *

It was a month after the last act of the Sorais tragedy that there was a great ceremony in the Flower Temple, and Curtis was formally declared king consort of Zu-Vendis. I was too ill to go myself, and, indeed, I hate all that sort of thing, with the crowds and the trumpet blowing and banner waving, but Good, who was there (in his full dress uniform), came back much impressed, and told me that Nyleptha had looked lovely, and Curtis had borne himself in a right royal fashion, and had been received with acclamations that left no doubt as to his popularity. Also he told me that when the horse Daylight was led along in the procession, the populace had shouted "Macumazahn, Macumazahn!" till they were hoarse, and would only be appeased when he, Good, rose in his chariot and told them that I was too ill to be present.

Afterwards, too, Sir Henry, or rather the king, came to see me, looking very tired, and vowing that he had never been so bored in his life, but I dare say that that was a slight exaggeration. It is not in human nature that a man should be altogether bored on such an extraordinary occasion, and, indeed, as I pointed out to him, it was a marvelous thing that a man who but little more than one short year before had entered a great country as an unknown wanderer should today be married to its beautiful and beloved queen, and lifted amid public rejoicings to its throne, and I even went the length to exhort him in the future not to be carried away by the pride and pomp of absolute power, but always to strive to remember that he was first a Christian gentleman, and next a public servant, called by Providence to a great and almost unprecedented trust. These remarks, which he might fairly have resented, he was so good as to receive with patience, and even to thank me for making them.

**To be Continued.**

The Southern Pacific Railroad employes building side-tracks at Mountain View, Santa Clara county, struck for an advance of 25 cents on their daily wages, owing to their expenses, which the company allowed without disputing.

Peter Allen, for many years Postmaster at San Gabaiel, dropped dead last week. Mary Rae, his wife, and from whom he has been separated, and who is an occupant of a disreputable house at Los Angeles, will fall heir to all his property.

The discovery of what is true and the practice of what is good are the two most important objects of life.

**"JUST HEAR THAT CHILD SCREAM!"**

Said Mrs. Smith to her sister, Mrs. Davis, as the sound of a child's shrieks came across the garden from a neighbor's house. "What kind of a woman have you for a neighbor? Does she abuse her children?" "No, indeed," replied Mrs. Davis. "She is one of the most tender mothers in existence. But you see, she believes in the old-fashioned styles of doctoring. When a child needs physic, she fills a spoon with some nauseous dose, lays the little victim flat on her lap, holds his nose till he is forced to open his mouth for breath, when down goes the dreadful mess. Then come the yells." "No wonder," said Mrs. Smith, "Why doesn't she use Dr. Pierce's Pleasant Purgative Pellets? They are effective without being harsh, and are as easy to take as sugar plums. I always give them to my children." "And so do I," said Mrs. Davis.

The best preacher is the heart; the best teacher is time; the best book is the world; the best friend is God.

See Antisell Piano advertisement.

There is nothing so strong or safe in any emergency of life as the simple truth.

The cleansing, antiseptic and healing qualities of Dr. Sage's Catarrh Remedy are unequalled.

## BABY'S GRIEVANCES.

**Some of the Trials and Tribulations of Little Tommy Cute.**

Tommy Cute, aged one, having suffered as long he can stand it, writes to us in order that his grievances, being known to the public, may immediately be cured.

I object, he says, in the first place, to being forced to adopt Farmer Jones' brindle cow for a foster mother.

I object, also, to the existence of a like relationship between myself and the condensed milk factory or the corn starch mill.

I object to having my stomach stuffed as a remedy for a mosquito bite on my little toe or a nasty pin in my back.

I object to personating a churn. I prefer to take my butter after the churning process is completed.

I object to being kissed by all the women, old and young, who come near me. I prefer to wait a few years, or at least until I shall be old enough to make my own selections.

I object to having people ask about my age. It is an impertinence. Besides, grown people sometimes remember, and of ages they are especially apt in keeping a record.

I object to having to go hungry until company is served. For my part I don't see what people want company for. Company is a nuisance. Mamma and papa have said so hundreds of times in my hearing.

I object to being obliged to go about with my neck and arms bare. When it is hot the flies and mosquities bother me awfully, and when the air is chilly I feel as though I were freezing to death.

I object, when I go out to ride in my perambulator, to having myself left alone in the sun while my maid sports with that long-legged chap with the yellow mustache and ready-made clothing.

I object to being sent to bed when I am not sleepy, and to having a nasty rubber tube stuck into my mouth every time I turn over in the night.

I object to having strangers make faces at me. They give me an awful start sometimes when they think they are amusing me.

—An anecdote in the *Woman's World* shows the attitude in Germany toward woman's part in public interests. At a call made by an English couple upon a German of eminence and his wife, talk arose upon the public question of the hour. The Englishman, perceiving that the German lady was being left out of the discussion, asked: "And what is your opinion, madam?" Before she could reply her German lord made short work of it: "Leave the room, meine Leibe; these matters can be of no interest to you."

—Dr. Hay, an English chemist with a leaning toward ghastliness, has invented a substitute for cremation. He would pound and pulverize the corpse in a mortar, breaking the bones to little bits. The resulting mass he would put through a prodigious sausage machine and make it into mincemeat. Dried by means of steam heat at a temperature of 250 degrees, the mass would attain a commercial value as a fertilizer. Should this method fail to suit, he suggests either the boiling of the body and the conversion of the resulting oil into a lubricant or for soap, or else the placing of the body in a gas retort and converting it into illuminating gas, water, ammonia, tar, animal charcoal, sulphate of ammonia, aniline colors and carbolic acid.

### Sparks and Flashes.

The mosquito is a hum-bug.

A Bay View chiropodist has dubbed himself "William, the corn-curer."

If tried the girls will invariably be found wanting—ice-cream.

Not often may a lawyer's charges be mentioned as bordering on the fee-nominal.

Mischievous youth may as well stand from under when choleric old age evinces a desire to raise cane.

"Ah, yes, all must take thought for the morrow," mused a shabbily dressed maker of bad puns, as with bundle under his arm, he awaited his turn at "my uncle's." "There's the woman at the counter, for instance; she's pawn'd-'er-ring."—*Detroit Free Press.*

—According to *Notes and Queries* the longest word in the English language in actual use is "disproportionableness," with twenty-one letters, closely followed by "incomprehensibleness." One of the longest of medical terms is "methylbenzoinethoxyethyltetrahydropyridinecarboxylate," which is the chemical term for cocaine.

**THE QUESTION IS OFTEN ASKED:**

"What are Hamburg Figs?" They are simply a crystallized fruit cathartic, composed of vegetables and fruits. They are a natural laxative, assisting Nature to overcome constipation, liver complaints, biliousness and piles. Physicians recommend Hamburg Figs to be given to infants, to Youths, and to their Parents, knowing them to be a mild, harmless, but most efficient laxative and purgative. During pregnancy the bowels always show a tendency to constipation, and during this period the continued use of Hamburg Figs is peculiarly indicated, because, being purely vegetable, they keep the blood cool and the system in perfect condition. Their continued use will cure the worst cases of hemorrhoids or piles. Hamburg Figs are sold at 25 cents a box by apothecaries. Dose, one Fig.

No remedy for sexual debility has ever been found that equals Dujardin's Life Essence. It restores feeble powers and invigorates the whole system. A simple trial will convince the most skeptical. Price, $1.50 a bottle. All druggists.

Sands make the mountains—moments make the years.

**THE LITTLE SEED.**

A little seed lay in the carter's path;
A little shoot bowed in the strong wind's wrath;
A little shrub grew, by its roots held fast;
Then a stout tree braved all the winter's blast.

A little cough started—'twas only light;
A little chill shivered the hours of night;
A little pain came and began to grow,
Then consumption laid all his brave strength low.

Be wise in time. Check the little cough, cure the little chill, dispell the little pain, ere the little ailment becomes the strong, unconquerable giant of disease. Dr. Pierce's Golden Medical Discovery, taken in time, is a remedy for these ills.

The man who is suspicious lives in a constant state of unhappiness. It would be better for his peace of mind to be too trustful than too guarded.

**PRUDENCE! PRUDENCE!**

In medication, as in aught else, prudence should be our guide. Yet thousands cast it to the winds. Every new nostrum finds its patrons, the medical empirics of every false school have their gulls. Every change in the gamut of humbug is rung successfully—for a time at least—the notes being furnished by the credulous. In happy contrast to the many advertised impostures of the day stands Hostetter's Stomach Bitters, now in its third decade of popularity, approved and recommended by physicians, indorsed by the press of many lands, sought and prized by invalids everywhere. It is an ascertained specific for and preventive of malarial diseases, chronic indigestion, liver complaint and constipation, checks the growth of rheumatism and neuralgia, is a peerless invigorant and useful diuretic. Nervous people benefit by it.

When the multitude applaud you, seriously ask yourself what evil you have done; when they censure you, what good.

White Elephant of Siam, Lion of England, Dragon of China, Cross of Switzerland, Banner of Persia, Crescent of Egypt, Double Eagle of Russia, Star of Chili, The Circle of Japan, Harp of Erin.

**WHAT BRANDRETH'S PILLS DO.**

In BRANDRETH'S PILLS the true life medicine has been found, composed as they are of numerous vegetables so combined that each multiplies the virtues of the rest. They never can do any harm. Their action is always the same, no matter how long or in what doses they are taken. They purge away the waste particles of the system. They recruit the animal vigor and arrest the progress of decay. They purify the blood. They stimulate the liver. They invigorate digestion. They open the pores. They make the bowels do the work of the kidneys, thus giving those organs an oftimes needed rest. One or two at night for a week will demonstrate their power and is generally sufficient to cure ordinary diseases.

Commit a sin twice, and it will not seem to thee a crime.

*"Brown's Bronchial Troches"* are of great service in subduing Hoarseness. *Sold only in boxes.*

You can only know by trying, how much comfort and pleasure follows the use of RUBYOAK, by making the teeth white, breath sweet, and preventing decay.

Try Germea for Breakfast.

Its superior excellence proven in millions of homes for more than a quarter of a century. It is used by the United States Government. THE COW BRAND. DWIGHT'S SALERATUS

# My Poor Back!

That "poor back" is held responsible for more than its share of the sufferings of mankind. If your dog bites a man who kicks it, do you blame the dog? On the same principle the kidneys utter their protest against nervousness, impure blood, and resulting constipation. These force them to do extraordinary work in ridding the system of the poisons which are the result of effete matter retained in the blood. Then the sufferer says the back aches; the kidneys are diseased. "Not yet;" but they will be unless the nerves are strengthened, the blood purified, and the constipation removed. These are the causes of kidney troubles, and Paine's Celery Compound removes them quickly. With its tonic, purifying, and laxative effect, it also strengthens the weak kidneys, making it almost infallible in curing all diseases of the nerves and kidneys. If your hopes of cure have not been realized, try Paine's Celery Compound; it gives perfect health to all who complain of "their poor backs." *Price $1.00.*

SOLD BY DRUGGISTS. SEND FOR ILLUSTRATED PAPER.

WELLS, RICHARDSON & CO., Proprietors, BURLINGTON, VERMONT.

ARM & HAMMER BRAND

*To Housekeepers and Farmers.*—It is important that the Soda or Saleratus you use should be White and Pure same as all similar substances used for food. To insure obtaining only the "Arm & Hammer" brand Soda or Saleratus, buy it in "pound or half pound" cartoons which bear our name and trade-mark, as inferior goods are sometimes substituted for the "Arm & Hammer" brand when bought in bulk. Parties using Baking Powder should remember that its sole rising property consists of bicarbonate of soda. One teaspoonful of the "Arm & Hammer" brand or Soda or Saleratus mixed with sour milk equals four teaspoonfuls of the best Baking Powder, saving twenty times its cost, besides being much healthier, because it does not contain any injurious substances, such as alum, terra alba, etc., of which many Baking Powders are made. Dairymen and Farmers should use only the "Arm & Hammer" brand for cleaning and keeping Milk Pans Sweet and Clean.

OUR TRADE MARK. CHURCH & CO'S SODA. ON EVERY PACKAGE.

CAUTION. See that every pound package of "Arm and Hammer Brand" contains full 16 ounces net, and the ½ pound packages *full* 12 ounces net, Soda or Saleratus same as specified on each package.

Packed in Card Board Boxes. Always keeps Soft.

## FOR CONSUMPTIVES.

**Patients for Whom a Removal to High Altitudes May Be Recommended.**

Prof. Knight, of the Harvard Medical School, read a paper, not long ago, before the Boston Society for Medical Observation, on the choice of a climate for consumptive persons. Some of the ideas advanced may be of value in families in which this paper is read.

Patients who have cavities in their lungs, and those who have severe hectic symptoms, especially if they are poor, should not leave home; nor should those who have any acute affection of the lungs do so, during the acute stage of the disease. If, in the early stages of consumption, complete cure can be hoped for, a climate is to be chosen in which the patient can remain throughout the year. If, on the other hand, nothing more than temporary relief, and some prolongation of life can be expected, a mild winter climate is recommended. While consumption presents a variety of phases and conditions, making it impossible to lay down fixed and invariable rules, it may be said that in general the first object aimed at by a change of climate is to enable the patient to live an active out door life, for the purpose of assisting nutrition of the lungs, and this is best attained in situations at an altitude of four thousand to eight thousand feet above the sea level.

Dry and pure air, a good proportion of clear days, and a rarefied atmosphere which compels greater activity of the respiratory organs, make a mountainous country the best for this purpose. Those for whom high altitudes may be recommended are:

(1.) Patients who show no more alarming symptoms than a morning cough and expectoration. For them Colorado and New Mexico are suited;

(2.) Those who have some consolidations of the lungs, but no cavity, nor any more serious constitutional disturbance. For persons who exhibit such disturbance—a high pulse and temperature—a lower altitude should be tried first; say the pure regions of Southern Georgia for the cold months, and then if there is improvement, a more elevated region;

(3.) Cases in which there is early and frequent hemorrhage without much other evidence of disease. The mountains are peculiarly suited to persons of this class; and,

(4.) Persons who are recovering from acute diseases of the lungs. But in these cases great care should be exercised, lest the steps taken ward off permanent pulmonary disease have an evil effect upon other organs weakened by sickness.

Patients in whom tubercular disease has invaded the larynx should on no account be sent to high altitudes. They need mild and moist climate, like that of Southern California. Moreover, those who have a tendency to irritability of the bronchial tubes, and nervous persons, do not do well in high altitudes. A very high altitude should not, as a rule, be recommended for any patient over fifty years of age. —*Youth's Companion.*

## A USEFUL COMPOUND.

**Water-Proof Composition for the Floors and Walls of Buildings.**

A patent has been granted for a waterproof compound adapted to be applied to the floors and walls of buildings, to prevent the access of water and dampness, and which will alsowithst and extreme and varying temperatures of air, and which will be practically indestructible.

The composition consists of the following ingredients, combined in substantially the proportions stated, viz.: New Zealand cement, 100 pounds; cream of tartar, 3 ounces; pulverized ivory, 1 ounce; quicksilver, 1 ounce; isinglass, 4 ounces; marble dust, 5 pounds; sand, 200 pounds; rain water, 1 pail.

In compounding the ingredients a small quantity of cement, for instance, one pound, is mixed with the cream of tartar, quicksilver and isinglass, and water enough to make a very thin paste, and the composition is let stand for about twenty-four hours. If the weather is cold, the composition should stand in a warm place. The remainder of the cement, the pulverized ivory, marble dust and sand are mixed dry, and the standing compound is thereupon added, together with enough rain water, about half a pail, to produce a plastic mass capable of being readily laid with a trowel or similar implement.

Instead of New Zealand cement, Portland or other cement of similar nature may be employed. If Portland cement is used, the proportions of the remaining ingredients should be increased about one-half. After the compound is laid upon a suitable foundation, such as wood earth, brick or metal, it becomes very hard, equal to steel, in addition to which it is capable of a very high polish.—*Age of Steel.*

### Mole-Hill and Mountain.

"I tell you, my friend," exclaimed the gentleman, vehemently, as he unfolded his napkin, "that a country that tolerates and encourages brutality will never be allowed to prosper. Look at Spain. Look at Mexico. We have not their bull-fights, it is true, but we have prize-fighting, cock-fighting, pigeon shooting matches, and in the fate of those countries—'

[Interruption by waiter]—"What will you have, sir?"

"Broil me a live lobster. In the fate of those countries, my dear sir, we may see the history of the United States foreshadowed," etc. — *Chicago Tribune.*

## AFRICAN TELEPHONES.

**How the Natives of the Cameroons District Communicate with Each Other.**

A part of Reclus' map showing the tribes who live in the Cameroon district, West Africa, is shaded to show exactly what portion of the country is the home of the four or five little tribes who have perfected an ingenious and practical telephone system that distinguishes them from all the other natives of Africa. Everywhere among the blacks of Africa the big drum or tam-tam is used in war and on festive occasions, but it is only these Cameroon natives who have discovered how useful the tam-tam may be made as a rapid promulgator of news over mountian and plain.

Of course, the news is telephoned by drumming on the tam-tam, but the sounds produced are not signals. They represent syllables and words, and so grow into sentences like the ticks of a telegraph instrument. It is a very ingenious invention, and deserves to rank with any of our own devices for the rapid transmission of news that were in vogue before the electric telegraph superseded them. The force and rapidity with which the instrument is beaten are elements in the interpretation of the idea to be expressed, and syllables and words are also formed by combinations of strokes, something like the Morse alphabet. It is a complicated system, and speaks highly for the intelligence of the people who devised it.

The system is a secret that is confided to only about two hundred of the natives. Though five or six of the white residents and explorers in that region have told all they know about the tam-tam telephone, its language is as yet wholly unintelligible to them, as the secret is carefully guarded. Only a few women have been instructed in the art, and no slave is permitted to acquire it.

It is the duty of every operator to be ready, if need be, when he hears the tam-tam to repeat the message, which is taken up in turn by operators further inland. In this way any news may be communicated for a distance of forty or fifty miles in a few hours. Thus the chiefs correspond with one another, and no important news happens that is not promptly telephoned all over the district. When a ship arrives at the mouth of the Cameroon river the tam-tam may be heard beating far up the side of the neighboring mountains, and the news is repeated from drummer to drummer until it reaches the furthest confines of the district. If a white party proposes to visit some chief in the interior the tam-tam carries the news to him that white visitors are coming almost before they have started on their journey. Thus our benighted African brother has taught himself a way to annihilate space and to transmit his thoughts on the wings of the wind.—*N. Y. Sun.*

## ADULTERATED BREAD.

**A Few Comments on the Use of Alum by Professional Bakers.**

Considerable exaggeration has been perpetrated in reference to the adulteration of bread with alum. The quantity actually used is very small, and the question whether the term adulteration is fairly applicable to such addition is a debatable one. From the baker's point of view it is not an adulteration but an improvement. He is fairly justified in maintaining that if the alum which he adds is an adulteration, so also is the salt and the baking powder which are added to home-baked bread. According to Tomlinson the proportion of alum commonly used is but 2 ounces to a sack of flour, weighing 280 pounds. As one sack of flour is—with water—made into 80 four-pound loaves, the quantity of alum to each pound of bread is but 1-160 of an ounce, or 1-2,560 part. Oddly enough in this case the baker supposes himself to be more guilty than he really is. He purchases what is called "stuff," or "rocky," in packets, supposing it to be ground alum. Tomlinson finds that it consists of three parts of common salt to one of alum. Half a pound of this is added to a sack of flour. The mode of action of this minute quantity of alum is a chemical conundrum not yet answered, but it actually does improve the appearance of the bread. Batch bread made of ordinary flour without alum has a lumpy fracture when the loaves are pulled apart, or the bread otherwise broken; the alum renders the fracture more silky. I have recently observed that the batch, or household, loaves commonly sold in Edinburgh show a more silky and in flat fracture than London loaves, and attribute this to the use of more alum. It may be that the Scotch bakers prepare their own "rocky," omitting the common salt. In Belgium and Northern France sulphate of copper is added to improve the appearance of bread; 1-1,500 to 1-3,000 part has a perceptible effect. It is said that the base of this and of alum combines with the gluten and renders it insoluble, but this theory does not explain the mystery of the efficacy of so small a quantity. Pure flour contains alumina. Mr. A. H. Allen, comparing the results of his own analysis with those of other chemists, estimates the average quantity of natural alumina to correspond to about 8 grains of alum in the four-pound loaf, which nearly corresponds to Tomlinson's allowance for the baker.—*W. Mattieu Williams, in Gentleman's Magazine.*

—Harvard University was organized in 1638. It has 180 instructors, 1,810 students and 325,000 volumes in its library.

## WEDDED ON HORSEBACK.

**Why the Conclusion of the Ceremony Had to Be Indefinitely Postponed.**

There are people who can not be satisfied with the ordinary forms of matrimony. They want the ceremony performed in some way that will produce a sensation. A young man of that sort lives over in New Jersey. He demanded something original.

He had heard of folks being married up in a balloon, down in a diving-bell, etc., but he didn't know of any balloon, and a trip to the Cave was too expensive, so he concluded to be married on horseback. The idea was not altogether a novel one—he had an idea that he had read of such a wedding before—but it was romantic and hadn't been introduced in New Jersey that he had ever heard.

Neither he nor his affianced were adepts in equestrianism, and the minister he engaged was never on horseback before in his life, so the situation proved somewhat embarrassing. When they assembled at the cross-roads rendezvous accompanied by mounted groomsmen and bridesmaids, the horses were restive and the riders nervous and alarmed. The bride and groom couldn't get their steeds close enough together to admit of taking hold of hands, so that preliminary was omitted.

The minister began: "If any person knows any reason why this couple should not be united let him—"

Here the groom's palfrey began to rear and plunge as if charged with vital information that he was eager to unload. He was finally coaxed into apparent acquiescence, but as he broke out more violently than ever when the minister again called for objections to the bans if any there were, the question was not pressed.

The bride, who was engaged in a struggle with her steed to prevent his standing on his head, begged hysterically that the nuptials be consummated as soon as possible, as she wanted to go right home to her ma. Meanwhile the minister's horse had backed up against the rail fence and was preparing to sit down like Dan Rice's trick mule and make himself as comfortable as possible until the show was over. He suddenly changed his mind, however, and waltzed around in the middle of the road so rapidly that the parson thought he was surrounded by a battalion of cavalry. As soon as he could rein up the horse and recover his breath the minister said: "Do you take——"

The groom didn't, but his horse did. He took the bits in his mouth and started down the road on a dead run, while the course of the bride put off in an opposite direction. The parson's nag hesitated a moment and then made a wild dash after the fleeing bride and helpless bridegroom. When within ear-shot the parson, with rare presence of mind under the circumstances—fearful, probably, of losing his fee—shouted after him: "Do you take this—I mean that—woman for your wedded—wife?"

What the reply would have been can not now be known, as the bridegroom's horse, swerving from his course, plunged into the canal along which they were passing, and the parson's was only stopped by running against the bar of a toll-gate. In the latter's eagerness to complete the ceremony and collect his fee the minister started to race back and get the bride's reply, but as she was out of sight he concluded to see her another time. The conclusion of the ceremony has been postponed until the parties concerned recover from their bruises and fright. —*Texas Siftings.*

## FACTS ABOUT EGGS.

**Curious Information from Many Lands and Remote Ages.**

All the world and his cosmopolitan wife and family like new-laid eggs. Nor do we depreciate their taste; on the contrary, we share it. The relish of eggs is honorable, and to prefer them fresh evinces a deep appreciation of the "fitness of things." Tradition reaches not back to the time when eggs, in this condition, were of evil repute, although the use of the stale variety as a missile has never been popular with the recipients. Probably the antediluvians were fond of eggs, for we are given to understand that they feasted high; and what would a banquet be without "the fruit of the hen?"

That the Egyptians were fond of eggs is beyond peradventure, for one of our archæologists brought home with him from Egypt some dozens, which had been at least three thousand years in the catacombs, having been placed there for the accomodation of the mummies in case they should wake up and feel peckish. These eggs, cackled over by the hens that flourished in the time of the early Pharaohs—laid, probably, before the children of Israel made their exodus by way of the Red Sea—we have seen, and many of them are as perfect externally as if they had been bought in market yesterday; but although Egyptian wheat of the same date is said to have germinated and reproduced itself, we are not aware that any of the eggs of that ilk have been set upon and hatched.

The Chinese are the greatest egg-eaters in the world. They raise more poultry than all the other nations of the earth taken together, and have a way of keeping eggs for forty years or more in a sound condition. The older the eggs the more valuable they are; and it is a trick of the Chinese grocer to ring in fresh eggs on his customers whenever he can get a chance to cheat them in that way.—*N. Y. Ledger.*

## ROYAL HORSE ARTILLERY.

**One of the Three Great Branches of the Army of England.**

The English army may be classed under three heads, the cavalry, the infantry and the artillery, and these three are again branched off under other denominations.

The artillery comprises the field artillery, the garrison artillery and the royal horse artillery, and it is of the latter I would speak more particularly. The royal horse artillery is, as its name implies, a mounted branch of the service and is used principally for the protection of cavalry. It is sometimes spoken of as the light or flying horse artillery, and justly so, for in rapidity of movement it surpasses any mounted regiment in her Majesty's service. It is divided into three brigades, A, B and C, and these are divided into batteries or divisions. A battery corresponds with a company of infantry, and is in charge of a Major, usually, with a Captain, three Lieutenants, a sergeant-major, and the usual staff of non-commissioned officers.

Each battery consists of six subdivisions representing the number of guns, and the full force of the battery is, either directly or indirectly, attached to one or another of these subdivisions.

Artillery men are either gunners or drivers, the former being all over five feet six inches, the latter from that height down. No recruits are drafted directly to the royal horse artillery, but are selected from either field or garrison batteries, so that the standard of this branch of service is exceptionally high, and as the pay is somewhat above the average, there is no lack of candidates.

Twelve men are required for each gun, although a subdivision may consist of twenty or thirty men, for there are always a large number of artificers and employed men—officers' servants, cooks, etc.—whose names are on the roster of the mess.

There are three drivers to a gun and each has two horses, designated as the lead, the center and the wheel horses. The gunners are numbered, and each is mounted except Nos. 8 and 9, who ride on the limbers and are known as limber guards. The No. 1 of a subdivision is always the non-commissioned officer in charge, usually a sergeant, and he it is who sights and points the gun, gives command and exercises general supervision. No. 2 loads, No. 3 sponges out the gun after it is fired and rams home the charge, No. 4 attends to the vent, No. 5 fires, No. 6 brings up the ammunition from 7 and 8, who attend to the limbers, and No. 9 is in charge of the ammunition wagon.

These are the general duties, though other work is entailed, and each man is drilled to take any position, or any two positions in case of an emergency.

The gunners are drilled to meet every conceivable emergency—a wheel may break, but a spare wheel is carried with the gun, and in an incredibly short time it is in its place—four of the gunners may be shot, but the gun is worked, perhaps not so easily, but just as efficiently. They are drilled in taking the whole machinery of the gun to pieces and putting it together again and so rapidly is that done that the time is measured not by minutes but by seconds.

It is a sight never to be forgotten to watch a battery of the royal horse artillery on the field. See; there they are away in the distance, the gunners and the drivers dismounted and idly resting in seeming disorder.

But hark! The bugle sounds the advance, and almost instantaneously the battery is on its way towards us at a gallop. Had we been nearer we would have heard the orders given without a pause between: "Prepare to mount," "Mount," "Trot," "March," and then "Charge," and without a hitch, or a moment's delay, without the least deviation from the regulation "distance," the six guns and their mounted escort are upon us. But again the bugle sounds, "Halt," "Action front," and then we see the guns which have necessarily been pointing to the rear unlimbered and directed to the front, while the limbers are wheeled right-about and taken to the rear, and all are ready to pour a deadly fire into an imaginary foe; and all this in quicker time than it takes to tell it.

It is an inspiring sight, and one that can not fail to impress itself upon the memory.—*Cor. Detroit Free Press.*

### In Need of Exercise.

Wife (ominously)—It must have been very late when you came in last night, John, for I didn't go to sleep until after eleven o'clock.

Husband (fearlessly)—It was half past eleven, my dear.

Wife—And you kept muttering in your sleep: "Set 'em up again," "set 'em up again."

Husband—Yes, I was playing tenpins with Brown. I need a little exercise of that sort.—*N. Y. Sun.*

### A Bare Possibility.

Dumley (to whom Brown has just related a somewhat incredible story)—I don't believe, Brown, that such a thing could happen!

Brown—Happen? Why, my wife saw it happen only this morning!

Dumley (apologetically)—Oh, I beg pardon if Mrs. Brown saw it happen, and told you the story herself, why, of course, there is a possibility of its being true.—*Life*

—A cat makes the most noise when every thing is still—that is, every thing but the cat.—*Yonkers Statesman.*

## THE HABIT OF DELAY.

**Why It Is Fatal to All Social Well-Being and Happiness.**

Some one has given the wise counsel that, in times of pressing emergency, when there is but a minute in which to act, one-third of that time should be devoted to thought. Certainly harm is frequently done by rushing into action without reflection; at the same time, an opposite evil of equal if not greater magnitude results from delaying the action which has already commended itself to the judgment. A large majority of the unfulfilled duties of the world is caused by the practice of delay. Good intentions are abundant; the ability and the will to carry them out are not wanting; but the habit of prompt action has never been acquired. Persons with this deficiency are wrecked in an emergency. Let the house be on fire or any sudden danger threaten them, and, instead of concentrating their mind upon the required decision for a portion of the time afforded, they spend the whole time in wavering considerations until the opportunity for action is gone, and the threatened evil that might have been averted overwhelms them.

In all business, this lack is most disastrous. Each day brings new problems to solve, new decisions to make, new duties to perform. Each one of these demands a certain amount of careful thought, but it also demands a final conclusion and prompt action. He who does not learn how to apportion these to the hourly necessities can not hope to succeed in his business, be it what it may. If he does not promptly decide and promptly act, time decides for him; the offer is withdrawn, the opportunity is gone, the chance has slipped away, and the dilatory man stands bereft of the power he might have wielded and the advantage he might have gained.

This habit of delay is fatal to all *social* well-being and happiness. In our relations with others nothing is more needful than to do quickly that which we are able to do for their comfort and pleasure. Much of this consists of little things, of which, indeed, the greater part of life is made up. A letter is to be answered, a call to be returned, a friendly word of greeting, or congratulation, or warning, to be uttered, a temporary distress to be relieved, a noble charity to be aided, some cheering news to be communicated. These things are constantly occurring to our minds, and we *mean* to do them, but not quite yet. We wait a little while, and, meantime, the spirit that would have animated them dies away, and either they are not done at all, or, coming so late, they fall flat and unheeded.

When we are animated by evil thoughts or unkind desires, when we are prompted to revenge a wrong, to reproach a failing, to say bitter words, or to do cruel deeds, *then* is the time for delay. Then may we well wait, and suffer these baneful feelings to cool and better ones to take their place. But if there is any righteous deed to be done, any justice to establish, any kindness to express, any love to manifest, any joy to diffuse, let us hasten to give it form and voice, knowing that there is neither time to waste nor space to pause in the blessed work of doing good.—*Christian Union.*

## NEW DRESS TRIMMINGS.

**A Variety of Novelties Recently Imported from Paris.**

For colored trimmings to be used on black, as well as on colors, the cashmere or Parisian galloons are most largely imported. These are embroideries of mixed metal threads, with a great deal of gold in most of them, and the ground is entirely covered, as if incrusted, giving a very rich effect; some chenille is wrought in occasionally as in antique needle-work, and a few colored beads are introduced. White cords with gilt cords are combined with white crystal beads that have golden centers; black cut jet beads are also associated with beads of white and gold. Scrolls, leaves, stars, palms and arabesques are the designs on the new passementeries in colors and in black alike. Large black beads are in the outlines of leaves and stems that are filled in with steel beads. A great many steel bead trimmings are shown for black and gray dresses. Very finely cut jet beads, both large and small, are in the new open-patterned galloons and gimps, and these will be a safe purchase, notwithstanding the fact that colored beads are little used. There are also many black gimps and galloons without beads, made up of large cords and open meshes and nettings, small Milan balls and drops, arranged to give a light open lace-like effect. Crocheted silk passementeries will be largely used, and there are crocheted wheels and centers of figures in the corded gimps. The durable mohair braid passementeries for trimming woolen dresses are very tasteful. Fringes are revived with old-fashioned knotted headings, with drops below, and also rich spiked fringes, the slender drops wrapped with silk, and the heading of open passementerie. Garnitures for mantles or dress waists are shoulder pieces in yoke shape, deeply pointed in front, made up of the large silk cords like those of passementeries. Slender designs run right and left to form the fronts of dress trimmings, and there are double rows of palms, to be separated as the garment may require, and pretty little twisted cords and vines for heading other trimmings. —*Harper's Bazar.*

—Chinese maidens invariably have almond eyes. Chestnut and hazel eyes are most prominent in this country.—*Harper's Bazar.*

## HOW TO SHIP FRUIT.

**The Principle Rules Applying to the Three Most Popular Methods.**

There are three principle ways for sending fruit to market, requiring correspondent treatment and packing. First, by spring wagons to neighboring towns or cities. Baskets are the best and cheapest packages; and now that they are made so cheaply by machinery, it is hardly necessary to require of purchasers the return of the baskets. They are commonly of some use to the consumers, who thus obtain them at the low price by the thousand at which the shippers buy them. If returned, they are apt to be more or less soiled, and purchasers prefer new and clean packages. Secondly, shipping by express. Nearly the same rules apply; and for all soft or perishable fruit, as peaches, cherries, strawberries, raspberries and grapes, baskets only should be employed—they will naturally be lifted with the large handle by the railway men, and not tumbled on their sides like boxes. Square or cubical boxes will be sure to be pitched in upside down, in spite of any "this side up" with which they are distinctly marked.

Hard fruit, like winter apples, or like autumn or winter pears which are put up a week or more before they soften, may be packed in kegs, half-barrels and barrels, by the mode generally understood by fruit men; and if the freight trains are known to run directly to their destination or to make direct connections, these barrels and half-barrels may be sent in the third method, as freight, much more cheaply than by express. The importance of thus packing and sending in kegs and barrels hard fruit only, should be well understood by men who put them up. A single instance will explain this importance. New hands were employed to pack Bartlett pears in half-barrels, a week in advance of the softening of the fruit. Care was taken not to admit any bad specimens; but among others a fine yellow pear was so attractive that "just this single ripe one" was included. The usual pressure of one inch was given, and the contents were pronounced safe and solid. But the jarring in transit caused the surrounding hard pears to indent the ripe one; this produced rattling, and rattling made larger and increasing dents; then the rest of the pears began to rattle, and by the time the package reached market the whole contents were bruised, defaced, spoiled.

Shippers of fruit may be divided into two classes—those who succeed, and those who fail. The former, by good cultivation, careful picking and honest assorting, place none but the best fruit in market, with their names on every package. In a few years their brand becomes well known to consumers, who are willing to pay well, because they know they are receiving their money's worth. The other class raise poor fruit, put the worst in the center of the package, get rid of it at slow sale as well as they can, and fail to sell even at a low price in future when they become known, for both wholesale dealers and consumers will try to avoid them.—*Country Gentleman.*

## SLIPSHOD FARMING.

**The Inevitable Fate of Men Who Do Not Take Care of Their Tools.**

The importance of having a place for every tool and article about the farm, and never failing to have that place filled, is only realized by that man who has observed that habit closely for sufficient time to calculate upon the saving thus occasioned. To drop a tool where it is last used is a habit sure to result in serious injury. It is told of a certain man, as a fact, that coming home late one evening he took the harness off the horse in the yard and threw it on the ground. He put the horse in the barn, left the carriage out of doors, as usual, and went to sleep, perfectly sober, but very tired. During the night a storm came and the snow blew into great heaps. When it was necessary to ride out the sleigh was found in another corner of the yard (the only carriage-house on the farm), the uncombed horse brought from the barn, but wide search revealed no harness, and it could not be remembered when it was last used or left. An old harness was brought into use, and it was not until the spring sun had melted the snow that the harness was discovered, where it had rested during the winter. The bars are down on this farm and everywhere one stumbles over something that remains near the place where it was last used. The farm is an eyesore, and if put on the market to-day, though in an excellent location, would find it difficult to get a purchaser. Another farmer is recalled, by way of contrast, who started with poorer prospects than the one just considered. He kept an orderly tool-house, and each child or employe was strictly charged to see to it, without fail, that a tool when used was promptly cleaned and restored to its place. He was an indulgent father, and the children feared but one thing, the misplacing of any tool, which would be certain to incur their father's displeasure. This habit has its beneficial results. It has saved money. It has saved time, and to-day, if the farm, though but ordinarily situated, was announced as for sale it would bring a high price. "Order is Heaven's first law," and the sooner the farmer or any other person puts himself in harmony with it the better.—*Ploughman.*

—A simple remedy for neuralgia is to apply grated horseradish, prepared the same as for table use, to the temple when the face or head is affected, or to the wrist when the pain is in the arm or shoulder.

## JESSE JAMES' REVOLVER.

**A Relic of the Dangerous Outlaw in a Chicago Pawn-Shop Window.**

In a Clark street pawn office in a conspicuous position is placed the celebrated revolver with which Jesse James let daylight through many an officer and civilian who were daring enough to try to effect his capture. It is the implement he wore when he came to Chicago many years ago to kill Billy Pinkerton when that functionary was making matters decidedly interesting for the band of which Jesse was the leader. Probably a more dangerous-looking gun was never manufactured. Even when unloaded it was an awe-inspiring thing, and when loaded it presents the appearance of a man-of-war with portholes open ready for battle. It is a 44 caliber gun and of the Colt pattern. But few of them are now in use. Army officers still cling to the "barkers" in preference to the improved death-dealing Smith & Wesson. When a Colt 44 bullet enters the frame of a human being there is but little use for doctors essaying to prolong the victim's life or save him from a speedy death. The weapon is about a foot long, heavy, and one would think too cumbersome for an individual of Jesse's temperament to carry. Such characters, as a rule, use weapons that are easy to handle, but the bandit evidently was of a different opinion and was exceedingly fond of his miniature cannon. When Jesse was given his quietus the gun became the property of Bob Ford. It will be remembered that Jesse was unarmed when Ford shot him; the revolver was on a table in the room where the assassination took place. Bob Ford carried the revolver East with him and displayed it in dime museums and tent shows throughout the country. He was arrested several times for carrying concealed weapons, and on one occasion the famous weapon was almost confiscated. Friends, however, interceded, and it was restored to him. While in this city and about broke he entered the pawnshop where the weapon still remains, and asked the proprietor how much he would give him for the relic. He didn't want to pawn it, but wished to dispose of it outright. The pawnbroker was told its history—which was authentic—and a bargain was made. The price paid was $7.50. Ford took the money, went West, and died by his own hand some time afterward.—*Chicago Tribune.*

## WORKING UNDER WATER.

**The Pressure in Air Caissons Below the Water Surface.**

The pressure of air in caissons at 110 feet below the surface of the water would be fifty pounds to the square inch. Its effect upon the men entering and working in the caisson has been carefully noted in various works and these effects are sometimes very serious; the frequency of respiration is increased, the action of the heart becomes excited, and many persons become affected by what is know as the "caisson disease," which is accompanied by extreme pain and in many cases results in more or less complete paralysis. The execution of work within a deep pneumatic caisson is worth a moment's consideration. Just above the surface of the water is a busy force engaged in laying the solid blocks of masonry which are to support the structure. Great derricks lift the stones and place them in their proper position. Powerful pumps are forcing air, and at uniform pressure, through tubes to the chamber below. Occasionally a stream of sand and water issues with such velocity from the discharge pipe that, in the night, the friction of the particles causes it to look like a stream of living fire. Far below is another busy force. Under the great pressure and abnormal supply of oxygen they work with an energy which makes it impossible to remain there more than a few hours. The water from without is only kept from entering by the steady action of the pumps far above and beyond their control. An irregular settlement might overturn the structure. Should the descent of the caisson be arrested by any solid under its edge immediate and judicious action must be taken. If the obstruction be a log, it must be cut off outside the edge and pulled into the chamber. Bowlders must be undermined and often must be broken up by blasting. The excavation must be systematic and regular. A constant danger menaces the lives of these workers, and the wonderful success with which they have accomplished what they have undertaken is entitled to notice and admiration.—*Scribner's Magazine.*

### The Storage of Life.

In a recent lecture to the Sanitary Institution of great Britain, Dr. B. W. Richardson considered the power the human body has been proven to possess of storing up life to a prolonged period. He stated the conditions favoring such storage in the following order: Hereditary qualification, the virtue of continence, maintenance of balance of bodily functions, perfect temperance and purity from implanted or acquired diseases. Temperament has its influence, the billious and sanguine temperaments being best for long life, and the nervous and lymphatic the worst. What he termed all-round temperance is the avoidance of every thing that stimulates the heart beyond its natural activity, such stimulation being an unnatural tax that reduces the storage of life.—*Science.*

—"I was paired five times last season," said the Senator. "Good gracious!" exclaimed Miss Fairanthirty, "and I haven't been paired once yet. What is the fare to Washington?"—*Burdette.*

# INYO INDEPENDENT.

**County Official Paper.**

C. Mulholland,
EDITOR & PROPRIETOR.
PUBLISHED EVERY SATURDAY.

INDEPENDENCE, CAL

SATURDAY DECEMBER 8 ..... 1883

Congress met last Monday. No business was done beyond reading the President's message. In the message the President continues his opposition to silver coinage and recommends that it be discontinued. The insolence of a Foreign Minister, in meddling with how an American citizen should vote, is dealt with in a way that will meet the hearty approval of all Americans, regardless of party. There is real and hearty sympathy expressed for the working people of the country, and it is urged that legislation soould endeavor to lighten the burdens of the poor. The President says the combinations of wealth and capital now so prevalent are "communism," and denounces them. On the whole the message will do more to gain the good will of his fellow citizens than any other of the State papers of the President.

The total vote of South Carolina at the late election was 79,675. In that State a very large proportion of the population are negroes. It is beyond dispute that wherever negroes are allowed to vote as they please, a vast majority never fail to vote the Republican ticket. And yet at this election only 13,850 votes were counted for Harrison electors in South Carolina. The conclusion is irresistible that the negroes were not allowed to vote or that the returns were falsified. This is a crime against freedom; it is treason. It was not because of their color, but because they were opposed to a minority of unscrupulous tyrants that the vote of the negroes in South Carolina was suppressed. That State has a Congressman for each 11,300 votes; California has a Congressman for each 41,600.

The capitalists have a zealous friend in the Comptroller of the Currency. That officer proposes a scheme for the retirement of about three hundred and sixty five millions of dollars in green backs, to be replaced by interest bearing bonds. The greenbacks do not bear any interest; therefore do not add to the public burden of taxation. The interest on the enormous sum stated would be just so much taken from the earnings of the working people of the country and given to the capitalists. There is no probability that such a robbery will be legalized by Congress; but the very suggestion of such a monstrous wrong is evidence of the need of change in the officers of Government.

### CERTIFICATE OF COPARTNERSHIP.

STATE OF CALIFORNIA, }
County of Inyo. }

We, the undersigned, do hereby certify that we are partners transacting business in the town of Big Pine, in the County of Inyo, under the firm name and style of Thomas & Hill, that the full names of all the members of such partnership are Robert Walker Thomas and Thomas Wheaton Hill, and that the places of our respective residences are set opposite our respective names hereto subscribed.

ROBERT WALKER THOMAS, Big Pine.
THOMAS WHEATON HILL, Big Pine.

In witness whereof we have hereunto set our hands this 27th day of November, 1888.

STATE OF CALIFORNIA, }
County of Inyo. }

On this 27th day of November in the year one thousand eight hundred and eighty eight before me, P. H. Mack, County Clerk and ex-officio Clerk of the Superior Court in and for the said County of Inyo, personally appeared Robert Walker Thomas and Thomas Wheaton Hill, known to me to be the same persons described in whose names are subscribed to and who executed the within instrument, and they acknowledged to me that they executed the same.

IN WITNESS WHEREOF, I have hereunto set my hand and affixed the seal of said Court, the day and year in this Certificate first above written.

[SEAL.] P. H. MACK
County Clerk and ex-officio Clerk of the Superior Court.
By A. K. EGGLEY, Deputy.

[ENDORSED.]
Filed November 28, 1888.
P. H MACK,
County Clerk.

### DESERT LAND FINAL PROOF.

D. E. No. 246.

UNITED STATES LAND OFFICE, }
INDEPENDENCE, CAL. }
Nov. 14, 1888.

Notice is hereby given that James K. Moffit, of Lone Pine, Inyo county, Cal., has filed notice of intention to make proof on his desert land claim No. 246, for the S W ¼ of S W ¼ Sec 2, S E ¼ of S E ¼ Sec 3, N E ¼ of N E ¼ Sec 10, N W ¼ of N W ¼ Sec 11, Tp 15 S, R 35 E. M D M., before the Register and Receiver of the office at Independence, Cal., on Monday, the 24th day of December, 1888.

He names the following witnesses to prove the complete irrigation and reclamation of said land: Albert W. Simonson, John J. Stewart, William P. Eakin and Reuben C. Spear, all of Lone Pine, Inyo county, California.

JOHN W. P. LAIRD, Register.

### DESERT LAND FINAL PROOF.

D E No. 242.

UNITED STATES LAND OFFICE, }
INDEPENDENCE, CAL. }
October 15, 1888.

Notice is hereby given that James Edward Shepherd, of Independence, Inyo county, California, has filed notice of his intention to make proof on his desert land claim No. 242, for the S W ¼, S ½ of N W ¼, N W ¼ of N W ¼, of Sec. 2, N E ¼ of Sec 3, Tp 14 S, R 35 E. M D M, before the Register and Receiver at Independence on Tuesday, the 27th day of November, 1888.

He names the following witnesses to prove the complete irrigation and reclamation of said land, viz.: Fred Holbert, Hiram C. Hamilton, Henry Detels and Henry L. Clark, all of Independence, Inyo county, Cal.

JOHN W. P. LAIRD, Register.

o-m14

## Proposals.

Proposals for building a bridge across Bishop Creek at the point known as "Matlick's Ford."

NOTICE IS HEREBY GIVEN THAT IN pursuance of an order of the Board of Supervisors of the County of Inyo, State of California, made the 16th day of November, 1888, the undersigned Clerk of said Board will receive sealed proposals for material and labor to be used in constructing a bridge across Bishop Creek at a point known as "Matlick's Ford" in accordance with the plans and specifications now on file in the office of the County Clerk, which are now subject to inspection until Tuesday, February 5, 1889, at 12 o'clock noon of said day; bids to be opened between the hours of 2 and 4 o'clock p. m. of said day.

SPECIFICATIONS.

Abutments to be built of stone cut square and laid close without mortar, base of said abutments to be not less than four [4] feet wide, fourteen [14] feet long, two [2] feet at the top, by fourteen [14] feet long at top and four [4] feet above low water mark; foundation to be let down at least twelve [12] inches below the bed of said stream. Stringers to be 12x12 inches, 30 feet long (hewn or sawed) five of said stringers to be used and to reach the entire span of 27 feet between the abutments resting on timbers 8x16, 14 feet long, which are to be firmly bedded on top of abutments. Truss frames on outside stringers to be hewn or sawed 8x10 inches, and to be constructed as per sketch marked "A" (in plans). The rods supporting truss to be not less than one [1] inch iron running from top of braces through outside stringer and through cross sills, 8x12, 14 feet long, underneath of stringers securely threaded on bottom of the same, the foot of braces to be bolted through stringers with one [1] inch bolts. Planking to be 3x10 inches, 14 feet long, securely spiked on to the stringers. All material to be of good quality and to be built in a substantial and workmanlike manner. The person or persons to whom said contract may be awarded shall give a good and sufficient bond in double the contract price, to be approved by the Board of Supervisors, for the faithful performance of said contract. Proposals must be endorsed "Proposals for building bridge across Bishop Creek at the point known as 'Matlick's Ford.' The right is reserved to reject any and all bids. P. H. MACK,
Clerk of the Board of Supervisors.

## Proposals.

Proposals for building a bridge across Bishop Creek at the point known as "Rowan's Ford."

NOTICE IS HEREBY GIVEN THAT IN pursuance of an order of the Board of Supervisors of the County of Inyo, State of California, made on the 16th day of November, 1888 the undersigned Clerk of said Board will receive sealed proposals for material and labor to be used in constructing a bridge across Bishop Creek at a point known as "Rowan's Ford," in accordance with the plans and specifications now on file in the office of the County Clerk, which are now subject to inspection until Tuesday, February 5, 1889, at 12 o'clock noon of said day; bids to be opened between the hours of 2 and 4 o'clock p. m. of said day.

SPECIFICATIONS.

Abutments to be built of stone cut square and laid close, without mortar, base of said abutments to be not less than four [4] feet wide, fourteen [14] feet long, two [2] feet at the top, by fourteen [14] feet long at top and four [4] feet above low water mark; foundation to be let down at least twelve [12] inches below the bed of said creek. Stringers to be 12x12 inches, 30 feet long, (hewn or sawed) five of said stringers to be used and to reach the entire span of twenty-seven [27] feet between the abutments, resting on timbers 8x16, 14 feet long which are to be firmly bedded on top of abutments. Truss frames on outside stringers to be hewn or sawed 8x10 inches and to be constructed as per sketch marked "A" on plans. The rods supporting truss to be not less than one [1] inch iron running from top of brace through outside stringer and through cross sills 8x12 inches, 14 feet long, underneath of stringers, securely threaded on bottom of same the foot of braces to be bolted through stringers with one [1] inch bolts. Planking to be 3x10 inches, 14 feet long and securely spiked to the stringers. All material must be of good quality and to be built in a substantial and workmanlike manner. The person or persons to whom said contract may be awarded shall give a good and sufficient bond in double the amount of such contract price, to be approved by the Board of Supervisors, for the faithful performance of such contract. Proposals must be endorsed "Proposals for building bridge across Bishop Creek at the point known as "Rowan's Ford." The right is reserved to reject any and all bids. P. H. MACK,
Clerk of the Board of Supervisors.

### AN ORDINANCE FIXING AND ESTABLISHING FIRE LIMITS OF THE TOWN OF INDEPENDENCE, COUNTY OF INYO, STATE OF CALIFORNIA.

Be it ordained by the Fire Commissioners of the Town of Independence, in the County of Inyo, State of California, as follows:

SECTION 1. That the fire limits of the Town of Independence, County of Inyo, State of California, be, and the same are hereby fixed and established as follows, to-wit:

Commencing at the north east corner of block No. 1 of the original Town of Independence, as shown by the plat now on file in the Recorder's office of Inyo county, thence south to and including the southeast corner of block number forty-eight of E. Robinson's Addition to the Town of Independence; thence west to the southwest corner of block number forty three of E. Robinson's Addition to said town; thence northerly to the southwest corner of lot number eleven in block number thirty-one of said original town; thence due north along the section line between sections number seventeen and eighteen, in town-hip number thirteen, south range number thirty five east, M. D. M., to the north line of lot number two in block number four of said original town; thence easterly to the place of beginning. Said limits being fully shown by the plats of said original town and E. Robinson's Addition thereto, as the same are filed in the Recorder's office of Inyo county.

SECTION 2. This Ordinance to take effect from and after its passage and filing in the office of the Recorder of said Inyo county.

Which said Ordinance was on the Sixteenth day of November, 1888, adopted by the following vote: A. W. Eibeshutz, aye, A. R. Conklin, aye.

We hereby certify that the above and foregoing is a true and correct copy of said Ordinance as the same was adopted by said Fire Commissioners on the Sixteenth day of November, 1888, and that the same was on the same date filed in the Recorder's office of the County Recorder of Inyo county.

Given under our hands this Sixteenth day of November, 1888.

A. W. EIBESHUTZ,
President of said Board.
A. R. CONKLIN,
Secretary of said Board.

### MISCELLANEOUS.

### ORDINANCE NO 27.

THE BOARD OF SUPERVISORS OF THE County of Inyo, State of California, do ordain as follows:

The following rules and regulations are hereby adopted for the government of the County Hospital of the County of Inyo, State of California, and for the preservation of health within the said county of Inyo.

SECTION 1. All persons on their admission into the Hospital shall deliver to the steward all moneys, articles of value, baggage, etc., except such necessary articles as may be required for immediate use; and the steward shall label them properly and keep them until such time as they may be required, giving the owner a memorandum of the same, and such persons must bathe and change clothes immediately on admission into such hospital, and thereafter on Saturday of each and every week.

SECTION 2. All patients who are able to be up must rise in time and be ready for breakfast; after which they must vacate the wards as far as possible during the day, that the beds furniture and floor of the wards may be cleaned. Every patient able to do so is required to come to the dining room for meals.

SECTION 3. Each and every inmate will be required at all times to perform any duty assigned to them, either as nurse, or assisting about the house, and a refusal to comply will cause an immediate discharge, such duties to be assigned by the steward, or by his orders.

SECTION 4. All employees are required to use the utmost kindness in dealing with the inmates, and under no circumstances will abuse of any kind be tolerated.

SECTION 5. No liquors of any kind shall be allowed to be used by any one, except by order of the physician in charge.

SECTION 6. Card playing, gambling, loud or profane talking, vulgarity or disorderly conduct of any kind is positively forbidden.

SECTION. 7. No inmate will be allowed to leave the premises without permission.

SECTION. 8. Begging from visitors is positively forbidden; also, smoking in the wards without permission; and every inmate is required to use every effort to promote cleanliness.

SECTION 9. Any inmate who shall introduce ardent spirits, cause any nuisance or disturb the house by quarrelling or fighting, or behave immorally or disrespectfully, in any manner, or circulate any book, print or pamphlet of an indecent or immoral character, shall be immediately discharged.

SECTION 10. All patients who are able to be up are required to keep their beds and bedside tables in a neat and orderly condition.

SECTION 11. Visitors must not make presents to patients without permission from the steward. This rule has particular reference to fruits, pastry confectionery and liquors.

SECTION 12. Patients are required to retire at 9 o'clock p. m., at which time all lights unless otherwise permitted, are to be extinguished. No unnecessary conversation will be permitted in the ward. No candles or other extra lights will be allowed in the ward without the consent of the steward.

SECTION 13. All violations of the above rules by the inmates must be reported to the physician to be dealt with by him or to be reported by him to the Board of Supervisors, at his option.

SECTION 14. The steward shall be subject to the orders of the physician in charge, and any violation of such orders shall be reported by said physician to the Board of Supervisors.

SECTION 15. For the purpose of carrying the provisions of this ordinance into effect the person in charge of said Hospital shall be considered to be the Steward.

SECTION 16. Patients can only be discharged by order of the physician in charge, and the said physician must keep a record of all such discharges, together with the date thereof.

SECTION 17. The Clerk must cause fifty copies of this ordinance to be printed on suitable board for posting in conspicuous places in the various wards of said Hospital.

SECTION 18. This Ordinance shall take effect and be in force on and after twenty-five days from the date of its passage.

SECTION 19. This Ordinance shall be published, with the names of the Board of Supervisors voting for and against the same, in the INYO INDEPENDENT, a newspaper published in said Inyo county, at least two weeks, said publication to be made for said time and before the expiration of said twenty-five days.

J. D. HARGER,
Chairman of the Board of Supervisors of Inyo county, State of California.
Attest: P. H. MACK,
Clerk of the Board of Supervisors.

The above and foregoing Ordinance No. 27 was duly passed enacted and ordained by the Board of Supervisors of Inyo county, State of California, at a regular meeting of said Board on the 16th day of November, 1888, by the following vote:

Ayes—J. D. Harger, J. R. Eldred and E. Robinson.
Noes—

J. D. HARGER,
Chairman of the Board of Supervisors.
Attest: P. H. MACK,
Clerk of the Board of Supervisors.

[Endorsed.]
ORDINANCE NO. 27.

Filed and recorded November 16th, 1888, in Ordinance Book "B" page 58 et seq.
P. H. MACK,
Clerk.

### NOTICE OF ELECTION.

IT IS HEREBY ORDERED BY THE FIRE Commissioners, of the Town of Independence, that an election of the qualified electors residing within the fire limits heretofore fixed by said Board, be held at the School House in said Town of Independence on the 22nd day of December, 1888, at which time there shall be submitted to said electors whether a tax shall be levied and raised for the purpose of establishing and maintaining a fire department for said town and protecting the same from loss by fire.

At such election there shall also be voted for one person as Assessor and one person as Collector. The same person may be elected to both offices.

At such election the ballots must contain the words "Tax, Yes," or "Tax, No," and the name of one person as Assessor and one as Collector.

The following persons are hereby appointed as officers to conduct said election: John C. Irwin, G. W. Brady and John A. Lack as Judges and J. D. Blair and C. W. Craig as Clerks.

Said election must be held in all respects as nearly as practicable in conformity with the general election law; provided that no new Register shall be required nor legal ballot paper, and provided further that the polls may be opened at eight o'clock A. M., and closed at five o'clock P. M.

The amount required for each specific purpose by the levying of said tax is five hundred and fifty dollars for fire hydrants; two hundred and fifty dollars for fire hose, one hundred dollars for hose carriage; twenty dollars for officers salaries and seventy-five dollars for hose house.

By order of the Board of Fire Commissioners and dated the 13th day of November, 1888.

A. W. EIBESHUTZ,
President of said Board.
A. R. CONKLIN,
Secretary of said Board.

Deep SEA WONDERS exist in thousands of forms, but are surpassed by the marvels of invention. Those who are in need of honest work that can be done at their own homes should at once send their address to Hallett & Co., Portland, Maine, and receive, free, all information how either sex of all ages can live at home and work at spare moments or all the time, earning from 50 cts to $5 per day and upwards where there is no capital required. You are started free. Capital not required. Some have made over $50 in a single day. All succeed.

$50 If you think of extending fifty or one hundred dollars in advertising send us a card by return mail, and we will tell you free of charge, what will be the best possible investment for you to make. Send 10 cents for our 174 page pamphlet. Address, GEO. P. ROWELL & CO'S NEWSPAPER ADVERTISING BUREAU 10 SPRUCE STREET, NEW YORK.

Invention has revolutionized the world during the last half century. Not least among the wonders of inventive progress is a method and system of work that can be performed all over the country without separating the workers from their homes. Pay liberal; any one can do the work, either sex, young or old; no special ability required. Capital not needed; you are started free. Cut this out and return to us and we will send you free, something of great value and importance to you that will start you in business, which will bring you in more money right away than anything else in the world. GRAND OUTFIT FREE. Address TRUE & CO., Augusta, Maine.

INDEPENDENCE, CAL.

SATURDAY, DECEMBER 8.....1888

The Grand Jury will meet next Tuesday.

Eggs cost half a dollar a dozen, and scarce at that.

Mr. E. H. Edwards was up from Lone Pine yesterday.

Butter has been selling during the week at 75 cents a roll.

Mr A. R. Conklin left town Thursday morning for San Frencisco.

Mrs. Naylor was down from Bishop Creek last Monday to prove up on land.

Arthur Smith has gone to Bishop Creek to do plumbing work for the new water works.

It is rumored that reduction works to cost one and a half million dollars will be built on the Comstock.

John C. Eldy came up from Darwin last Monday. He is in poor health and is now in care of Doctor Woodin.

Jack Stevens was very severely hurt in the Chollar mine on Thursday of last week, rocks caved upon him.

The rains of two weeks ago started the grass to growing, and now there is good pasturage.

Mrs. Margaret Reddy Reddy came up from Darwin last Wednesday and was in town a few days.

It is reported that the Diamond mine at Eureka, Nevada, has been sold to Salt Lake parties for $60,000.

Cattlemen say grass is making quite a start and cattle on the outside are gaining flesh. It is a very favorable season so far.

James F. Gladding died at Gold Hill, Nevada, last Sunday. He served several terms as Chief Engineer of the Gold Hill fire department.

Frank Silva and Miss Catalina Arambula were married last Saturday evening at Independence. It was a very quiet affair; only a few friends being present.

Frank Parrish, the missing witness who disappeared so suddenly from Independence some months ago, is at Camp Cady, San Bernardino county.

Mr. John Shepherd is prepaving a band of horses and mules for market; he expects to start them for the other side of the mountains in a few days.

Mr. S. G. Sneden came down from Bishop Creek last Monday. He was attending to business as Attorney for John Dunlap, held for assault on Doctor Middleton.

Donnelly, Deane & Co., of San Francisco, have brought suit against Mike Tarpey and his brother, and charge them with conspiracy to defraud plaintiffs out of $22,000.

The most pressing need of Darwin at the present time is a visit from Pat Reddy. The place is very dull and Mr. Reddy never fails to make business better when he goes there.

Doctor Middleton came down from Bishop Creek last Friday. He had a finger amputated by Doctor Woodin. The finger was smashed in the encounter with Dunlap at Bishop Creek a week or two before.

John Henry Myers was hanged at Placerville last Friday for the murder of John Lowell. Myers was a cowardly wretch; he was so weak from fear that he had to be held up on the gallows by two men while the rope was adjusted about his neck. On the way from the cell to the scaffold he cried and hollered from cowardly terror.

The *Enterprise* says that last week W. H. Stanley found the remains of a human body hidden in the shaft of the Montgomery mine at Cedar Hill. The body had been wrapped in a gunny sack, and there was evidence that more than one person had taken part in putting it where it was found. It is supposed that a murder was committed.

After a good deal of experience Mr. John Shepherd, of Georges Creek, says the most profitable kind of horses to raise for market are horses of all work. Animals that have weight and strength enough for plowing and general farm work, and yet have action and form that fit them for buggy or carriage horses. This is the class of horses Mr. Shepherd is now raising.

After a long illness Thomas Bastian died last Saturday at three o'clock in the afternoon. He was a native of Cornwall, England, and came to the United States in 1864. He was long a citizen of Inyo county. He was an industrious man and had many friends. A wife and two children mourn the loss of a good husband and father. He was aged forty-seven years. A large number of people attended the funeral last Monday. The body was buried at Independence.

There is talk of a general strike of Chinese all over the State for higher wages. The more demands made by Chinese for higher wages the better for the country. White labor will be preferred to Chinese labor when there is not too much difference in the rates of wages; and the more nearly the wages paid to Chinese approaches the rates for which white people can afford to work, the sooner we will get rid of the Chinese.

The Haggin and Carr ranch is about to be divided up into small tracts and sold to settlers. The estate contains 400,000 acres in Kern, Santa Barbara and San Luis Obispo counties. It is understood that they will begin by subdividing 150,000 acres of land near the town of Bakersfield, Kern county, while it is reported that contracts for the sub-division of twice that amount of land in that vicinity were let four weeks ago. Land offices in Bakersfield, San Francisco, Los Angeles and Chicago will be opened for the sale of the tracts.

A reward of two thousand dollars is offered for the arrest and conviction of the murderers of Isaac N. Woodhouse. The murder was committed about fifteen miles south of Teel's Marsh, in Esmeralda county, Nevada, on or about the 10th day of January, 1887. A liberal reward will also be paid for the recovery of the buckboard and harness, the watch, rifle and revolver, belonging to deceased. A horse that belonged to him was recovered. Address,

Z. LYFORD,
Hawthorne,
Nevada.

## COPP'S LAND REVIEW.

### The new Homestead Law—Glad Tidings for Homeless Thousands.

A new land bill of great importance to persons who have heretofore exhausted their rights under the homestead and pre-emption laws has passed the Senate and with important amendments has been adopted by the House of Representatives and returned to the Senate for concurrence in the amendments.

The bill as passed by the Senate permits all persons who have filed under pre-emption or homestead law, but who for any reason have failed to acquire tisle to lands, to again file under the homestead law and acquire title to not more than one quarter section of public land.

The first amendment added by the House of Representatives authorizes registers and receivers to grant leaves of absence to those who have made entries and who "by reason of drought, whole or partial destruction of crops, sickness, or other unavoidable casualty," are unable to "secure a support for himself, herself, or those dependant upon them," such absence not to exceed 1 year at one time, though the period of such absence shall not be counted as residence upon the land in making proof and perfecting title.

The second amendment provides that persons who have made homestead entries for less than one quarter section may make additional entry for land contiguous to the original homestead not exceeding, with the land in such original entry, 160 acres, or if the entryman elect they may relinquish the original entries and make new ones the same as though they had never made entries, except that no fees or commissions shall be exacted from the entryman for such additional or new entries. The residence which has been made upon the original entry will count as residence upon the additional or new entry in making final proof, and where satisfactory final proof has already been made on the original entry no proof on the additional or new entry will be required, but patent may issue.

This will be glorious news to thousands of persons anxious to acquire homes but debarred from doing so under existing laws. There is little doubt that the bill will pass the Senate as amended.

Copies of the bill can be had by addressing members of Congress.

HENRY N. COPP.

### Breeding for Sex.

An English stock breeder has to say as follows about breeding for sex.

"Will you allow me to make known to my fellow breeders, through your columns, a valuable discovery bearing upon the above subject? To put it as concisely as I can, I will merely state that the sex of progeny is governed by what may be called a law of alternatives, *i. e.*, the female, when she comes in season, is prepared to conceive, say, a male; if, however, she should not conceive at that time, she will at her next period, be prepared to conceive a female, or, in other words, alternate sexes.

Thus, if a mare produces a colt foal—if she is served the first time she is in season after the birth of the foal, and conceives the result will be a filly foal. If, however, she goes over to her second time, and then conceives, the progeny will again be a colt foal, and so on alternately.

It is obvious, therefore, that by bearing this rule of alternative sexes in mind, the breeder, by careful management and observation may, in most cases, govern the sex of the progeny. This discovery was originally made by an extensive and observant American breeder, and has since been practically proved to be correct in England. Believing it to be a valuable discovery, and at present known to very few, I venture to draw the attention of breeders to it."

### Contrast.

At the East terrible storms have been raging; deep snow covers the country and bitter cold prevails. This terrible weather brings untold suffering to the poor and causes discomfort to those who are possessed of ample fortune. Here in Owens Valley fruit and shade trees yet retain some of their foliage; there has not yet been one cold day this season; farmers have been plowing and already have a great deal of land ready for the next crop; the days are warm and invite to outdoor life; children play in the warm sunshine without knowing anything of the horrors of an eastern winter. A valley with such a climate, and where there is ample room for fifty thousand more people than are here; where the soil is fertile and will produce all the most valued fruits of the finest quality; where land can be had for a merely nominal price and where springs and streams of pure water abound has a glorious future before it.

### To The Ladies.

Having laid in one of the finest assortments of Fall Dress Goods and Trimmings ever brought to Inyo county, I have arranged to supply a long felt want by securing a means for having the goods made up in the latest fashion. By an agreement with a leading dress maker of San Francisco ladies can now select their goods, have their measure taken under an improved system, and choose from the latest fashion plates—which we will always have on hand—such styles as they may prefer. The cost for making will be but nominal. Satisfaction in fit and make up guaranteed. No cost for sending the goods to the dressmaker and returning finished dress to the purchaser. Respectfully,

NATHAN RHINE.

### Meteorological Summary for November, 1888 Keeler, Cal.

| | |
|---|---|
| Mean reduced barometer | 29.988 inches. |
| Mean temperature | 49° |
| Highest temperature | 70° |
| Lowest temperature | 32° |
| Monthly range of temperature | 38° |
| Mean dew point, 30° | |
| Mean relative humidity 52 per cent. | |
| Prevailing direction of wind, S. E. and S. | |
| Maximum velocity of wind, direction and date, 34 miles N. W. 27th. | |
| Precipitation | 1.68 |
| Number of clear days | 15 |
| Number of fair days | 10 |
| Number of cloudy days | 5 |
| Dates of frosts, killing, 28, 29, 30. | |

Private, Signal Corps.

### That Ball.

The item in last week's issue about a complimentary ball was not correctly given. The ball is to come off on the evening of the first Monday in January, and will be complimentary to outgoing officers and defeated candidates. A sort of consolation, race, as it were, to beaten horses. The ball will be given with all appliances and means to boot to make it thoroughly enjoyable.

### Card.

We desire to extend our thanks to the people of Independence for their kind attentions to our sister, Mrs. Warnes, during her last illness. Kind actions are remembered and rewarded, both here and on high.

MRS. I. P. YANEY,
MRS. SETH G. SNEDEN.

### Card.

To the many friends who during the long illness of my husband were constant in their kindness; and at the last sad hours sympathized with me and my fatherless children, I tender my heartfelt thanks. The presence of these friends and their kind words and gentle care brought some consolation in the dark presence of death and when the grave closed over the kind husband and father.

MRS. ANN BASTIAN.

On Saturday, December 22nd—two weeks hence—an election will be held at Independence to decide if a tax shall be levied for the purpose of establishing and maintaining a fire department for the town. The whole amount to be raised by the tax is $975. The benefit to the town by the organization of a fire department will far exceed the cost. In all probability the rates of insurance would be so decreased as to more than equal the amount proposed to be raised by the tax. See the notice of election in another column.

Another English syndicate has been organized in London to invest in Aurora mining property, and the way they have started in shows that they mean business. The first instalment has been paid in, and the Humboldt, belonging to Governor Blasdell, and several other mines, have been purchased, or are in a fair way to be. This Company propose to erect a forty-stamp mill at their mines, the motive power to come from an electric "plant" to be erected on Walker River. This will enable the Company to work low-grade ores at a profit, and there are thousands of tons of such ores in the Aurora District awaiting a cheap method of reduction. The prospects are extremely flattering for the old camp to regain some of her old-time glory.—*Chronicle-Union.*

### Improvements in Mining.

The introduction of electricity to run machinery is working a great and beneficial change in mining. At the deep mines of the Comstock the cost of fuel is great, and so much labor is necessary to make power by steam, that unless ore would yield at least fifteen dollars per ton it would not pay to work at all. By the use of water to generate electric power the expense is so much lessened that it is believed ore that will yield no more than five dollars per ton can be worked at a profit. It is asserted that there are millions of tons of such ore available on the Comstock. In every mining camp the low grade ore is vastly in excess of the ore that has hitherto been found worth enough to work. Electricity and other improvements and discoveries may make these vast ore bodies profitable to work.

### MARRIED.

SILVA—ARAMBULA—At Independence Dec. 1st, 1888, by C. Mulholland, Justice of Peace, Mr. Frank Silva to Miss Catalina Arambula.

### DIED.

BASTIAN—At San Carlos, near Independence, December 1st, 1888, Thomas Bastian, a native of Cornwall, England, aged 47 years.

Young or old, married or single, sick or well, should read it. Sent sealed. DR. WHITTIER, 84 Louis St. ... AND SEND WITH ORDER.

## A CLAIM TO HUMAN GRATITUDE.

Charlotte Corday, the sad-faced, tender-hearted peasant girl of Normandy made great history by one desperate act!

Sickened by the saturnalia of the French revolution, and moved to desperation as Robespierre and Marat were leading the flower of France to the guillotine, she determined that she would put an end to Marat's bloody reign.

Marat had demanded two hundred thousand victims for the guilotine!

He proposed to kill off the enemies of the Revolution to make it perpetual!

Horrible thought!

No wonder it fired the blood of this patriotic peasant maid!

Gaining access to his closely guarded quarters by a subterfuge, she found him in his bath even then inexorable and giving written directions for further slaughter!

He asked her the names of the inimical deputies who had taken refuge in Caen. She told him, and he wrote them down. "That is well! Before a week is over they shall all be brought to the guillotine."

At these words, Charlotte drew from her bosom the knife, and plunged it with supernatural force up to the hilt in the heart of Marat.

"Come to me, my dear friend, come to me," cried Marat, and expired under the blow!

In the Corcoran gallery at Washington is a famous painting of Charlotte, represented as behind the prison bars the day before her execution.

It is a thrilling, sad picture, full of sorrow for her suffering country, and of unconquerable hate for her country's enemies.

What a lesson in this tragic story! Two hundred, nay, five hundred thousand people would Marat have sacrificed to his unholy passion of power!

Methods are quite as murderous and inexorable as men, and they number their victims by the millions.

The page of history is full of murders by authority and by mistaken ideas! In the practice of medicine alone how many hundreds of millions have been allowed to die and as many more killed by unjustifiable bigotry and by bungling!

But the age is bettering. Men and methods are improving. A few years ago it was worth one's professional life to advise or permit the use of a proprietary medicine. To-day there are not two physicians in any town in this country who do not regularly prescribe some form of proprietory remedy!

H. H. Warner, famed all over the world as the discoverer of Warner's safe cure, began hunting up the old remedies of the Log Cabin days; after long and patient research he succeeded in securing some of the most valuable, among family records, and called them Warner's Log Cabin remedies—the simple preparations of roots, leaves, balsams and herbs which were the successful standbys of our grandmothers. These simple, old-fashioned sarsaparilla, hops and buchu, cough and consumption and other remedies have struck a popular chord and are in extraordinary demand all over the land. They are not the untired and imaginary remedies of some dabster chemist intent on making money, but the long-sought principles of the healing art which for generations kept our ancestors in perfect health, put forth for the good of humanity by one who is known all over the world as a philanthropist—a lover of his fellow man,—whose name is a guarantee of the highest standard of excellence.

The preparations are of decided and known influence over disease, and as in the hands of our grandmothers they raised up the sick, cured the lame, and bound up the wounds of death, so in their new form but olden power as Log Cabin remedies, they are sure to prove the "healing of the nations."

Cordiay did the world an incalculable service in ridding France of the bigoted and murderous Marat, just as this man is doing humanity a service by re-introducing to the world the simpler and better methods of our ancestors.

### A Short and Tough Lot.

The lot of our criminal classes seems demonstrably to be a short one and a tough one. It has actually no ameliorations. "Out of 60,000 prisoners, more than one-half are between the ages of 17 and 30." It takes but three generations to use up a stock that runs to vice. The average life of vicious people is less than one-half that of people of virtue. A recent writer complains that science creates a code of morals that consists in health. Is that not precisely why we are so deeply indebted to science that it is enlarging and lengthening the span of life, and at the same time teaching us what valuable thing life can achieve?

## PEOPLE MADE HAPPY.

### They Win In the Louisiana State Lottery.

San Francisco was among the lucky cities in the last drawing of the Louisiana State Lottery. Three tickets brought small fortunes to three families.

"It was funny how I came to get in on this drawing," said L. Zacharias, who won $5,000. "My wife was sick, and I left my house, 929 Sutter street, to get something for her at the grocery store. While I was there a man came in with two lottery tickets. I thought I'd take one, just for fun. The next day the drawing took place and I was just $5,000 richer. It came in handy, for we've two invalids at our house. Yes, I got the coin, and I'll take care of it, too."

Three people won a one-twentieth of the second capital prize of $100,000. It was like this: Louis Indig, the milkman, living on Gunnison avenue, between Twenty-seventh and Twenty-eighth sts., bought a ticket numbered 21,025. One of his customers, Mrs. Aleck McGee, living on Perry street, near Fourth, wanted a chance in the lottery, and asked Indig for his ticket.

After some coaxing, the milkman gave it up, when Mrs. McGee said it was for a lodger, Robert Voight, who works at S. & G. Gump's store. The ticket won $5,000. Voight got married, gave Mrs. McGee $1,000, and moved to 233 Fourteenth street.

"Seems to me," said Mr. Indig, "I'm the only man I know who bought tickets in the Louisiana State Lottery last month without winning something."

The third ticket was sent by a man here to a friend in Washington Territory. All that they won has been delivered.—*San Francisco* (Cal.) *Chronicle*, Oct 6.

### THE PACIFIC BANK

Has issued its quarter Centennial statement, which is indeed an interesting circular, and proves in figures that the past year has been the most prosperous one the BANK has ever had. It is a matter upon which all Californians may be congratulated, that the Bank still has the same able and conscientious President, Dr. R. H. McDonald.

# Allan Quartermain

### By H. RIDER HAGGARD.

AUTHOR OF "KING SOLOMON'S MINES," "SHE" "JESS," "THE WITCH'S HEAD," ETC.

(CONTINUED.)

It was immediately after this ceremony that I caused myself to be moved to the house where I am now writing. It is a very pleasant country seat, situated about two miles from the Frowning City, onto which it looks. That was five months ago, during the whole of which time I have, being confined to a kind of cough, employed my leisure in compiling this history of our wanderings from my journal and our joint memories. It is probable that it will never be read, but it does not much matter whether it is or not, at any rate, it has served to while away many hours of suffering, for I have suffered a deal of pain lately. Thank God, however, there will not be much more of it.

* * * * * * *

It is a week since I wrote the above, and now I take up my pen for the last time, for I know that the end is at hand. My brain is still clear and I can manage to write, though with difficulty. The pain in my lung, which has been very bad during the last week, has suddenly quite left me and been succeeded by a feeling of numbness of which I cannot mistake the meaning.

And so this is the end of it—a brief space of troubling, a few restless, fevered, anguished years, and then the arms of that great angel death. Many times have I been near to them, many and many a comrade have they embraced even at my side, and now it is my turn at last, and it is well. Twenty-four hours more and the world will be gone from me, and with it all its hopes and all its fears.

Well, it is not a good world—nobody can say that it is save those who willfully blind themselves to facts. How can a world be good in which money is the moving power and self interest the guiding star? The wonder is not that it is so bad, but that there should be any good left in it.

Still, now that my life is over, I am glad to have lived, glad to have known the dear breath of woman's love, and that true friendship that can even surpass the love of woman; glad to have heard the laughter of little children, to have seen the sun and the moon and the stars, to have felt the kiss of the salt sea on my face, and watch the wild game trek down to the water in the moonlight. But I should not wish to live again!

Everything is changing to me. The darkness draws near, and the light departs. And yet it seems to me that through the darkness I can already see the shining welcome of many a long lost face. Harry is there, and others; one above all, to my mind the sweetest and most perfect woman that ever gladdened this gray earth. But of her I have already written elsewhere, and at length, so why speak of her now? Why speak of her after this long silence, now that she is again so near to me?

The sinking sun is turning the golden roof of the great temple to a fiery flame, and my fingers tire.

So to all who have known me, or who can think one kindly thought of the old hunter, I stretch out my hand from the far off shore and bid a long farewell.

And now into the hands of Almighty God, who sent it, do I commit my spirit.

"I have spoken," as the Zulus say.

### CHAPTER XXIV.

BY ANOTHER HAND.

A year has elapsed since our most dear friend Allan Quatermain wrote the words "I have spoken" at the end of his record of our adventures. Nor should I have ventured to make any additions to that record had it not happened that by a most strange accident a chance has arisen of its being conveyed to England. The chance is but a faint one, it is true, but as it is not probable that another will arise in our lifetimes, Good and myself think that we may as well avail ourselves of it, such as it is. During the last six months several frontier commissions have been at work on the various boundaries of Zu-Vendis, with a view of discovering whether there exists any possible means of ingress or egress from the country, with the result that a channel of communication with the outer world hitherto overlooked has been discovered. This channel, apparently the only one (for I have discovered that it was by it that the native who ultimately reached Mr Mackenzie's mission station, and whose arrival in the country, together with the fact of his expulsion, for he did arrive about three years before ourselves, was for reasons of their own kept a dead secret by the priests to whom he was brought), is about to be effectually closed. But before this is done a messenger is to be dispatched bearing with him this manuscript, and also one or two letters from Good to his friends, and from myself to my brother George, whom it deeply grieves me to think I shall never see again, informing them, as our next heirs, that they are welcome to our effects in England, if the court of probate will allow them to take them, inasmuch as we have made up our minds never to return to Europe. Indeed it would be impossible for us to leave Zu-Vendis even if we wished to do so.

The messenger who is to go, and I wish him joy of his journey, is Alphonse. For a long while he has been wearied to death of Zu-Vendis and its inhabitants. Oh, oui, c'est beau," he says, with an expressive shrug; "mais je m'ennuie, ce n'est pa chic." Poor Alphonse! we shall be very sorry to part with him, but I sincerely trust, for his own sake and also for the sake of this history, which is, I think, worth giving to the world, that he may arrive in safety. If he does, and can carry the treasure we have provided him with in the shape of bars of solid gold, he will be, comparatively speaking, a rich man for life, and well able to marry his Annette, if she is still in the land of the living and willing to marry her Alphonse.

Anyhow, on the chance, I may as well add a word or two to dear old Quartermain's narrative.

He died at dawn on the day following that on which he wrote the last words on the last chapter. Nyleptha, Good and myself were present, and a most touching and yet in its way beautiful scene it was. An hour before the daybreak it became apparent to us that he was sinking, and our distress was very keen. Indeed, Good melted into tears at the idea—a fact that called forth the last gentle flicker of humor from our dying friend, for even at that hour he could be humorous. Good's emotion had, by loosening the muscles, naturally caused his eye glass to fall from its accustomed place, and Quatermain, who always observed everything, observed this also.

"At last," he gasped, with an attempt at a smile, "I have seen Good without his eyeglass."

After that he said no more till the day broke, when he asked to be lifted up to watch the rising of the sun for the last time.

"In a very few minutes," he said, after gazing earnestly at it, "I shall pass through those golden gates."

Ten minutes afterward he raised himself and looked us fixedly in the face.

"I am going a stranger journey than any we have taken together. Think of me sometimes," he murmured. "God bless you all. I shall wait for you together," and with a sigh he fell back dead.

And so passed away a character that I consider went as near perfection as any it has ever been my lot to encounter.

Tender, constant, humorous, and possessing many of the qualities that go to make a poet, he was yet almost unrivaled as a man of action and a citizen of the world. I never knew any one so competent to form an accurate judgment of men and their motives. "I have studied human nature all my life," he would say, "and I ought to know something about it," and he certainly did. He had but two faults—one was his excessive modesty, and the other a slight tendency which he had to be jealous of anybody on whom he concentrated his affections.

Good read the burial service over him in the presence of Nyleptha and myself, and then his remains were, in deference to the popular clamor, accorded a great public funeral, or rather cremation. I could not help thinking, however, as I marched in that long and splendid procession up to the temple, how he would have hated the whole thing could he have been there to see it, for he had a horror of ostentation.

And so, a few minutes before sunset, on the third night after his death, they laid him on the brazen flooring before the altar, and waited for the last ray of the setting sun to fall upon his face. Presently it came, and struck him like a golden arrow, crowning the pale brows with glory, and then the trumpets blew, and the flooring revolved, and all that remained of our beloved friend fell into the furnace below.

We shall never see his like again if we live a hundred years. He was the ablest man, the truest gentleman, the firmest friend, the finest sportsman, and, I believe, the best shot in all Africa.

And so ended the very remarkable and adventurous life of Hunter Quatermain.

* * * * * * *

Since then things have gone very well with us. Good has been, and still is busily employed in the construction of a navy on Lake Milosis and another of the large lakes, by means of which we hope to be able to increase trade and commerce, and also to overcome some very troublesome and warlike sections of the population who live upon their borders. Poor fellow! he is beginning to get over the sad death of that misguided but most attractive woman Sorais, but it is a sad blow to him, for he was really deeply attached to her. I hope, however, that he will in time make a suitable marriage, and get that unhappy business out of his head. Nyleptha has one or two young ladies in view, especially a daughter of Nasta's (who was a widower), a very fine imperial looking girl, but with too much of her father's intriguing, and yet haughty spirit to suit my taste.

As for myself, I should scarcely know where to begin if I set to work to describe my doings, so I had best leave them undescribed and content myself with saying that, on the whole, I am getting on very well in my curious position of king consort—better, indeed, than I had any right to expect. But, of course, it is not all plain sailing, and I find the responsibilities very heavy. Still I hope to be able to do some good in my time, and I intend to devote myself to two great ends, namely, to the consolidation of the various clans which together make up the Zu Vendi people under one strong central government, and to the sapping of the power of the priesthood. The first of these reforms will, if it can be carried out, put an end to the disastrous civil wars that have for centuries devastated this country; and the second, besides removing a source of political danger, will pave the road for the introduction of true religion in the place of this senseless Sun worship. I yet hope to see the shadow of the cross of Christ lying on the golden dome of the Flower temple, or, if I do not, that my successors may.

There is one more thing that I intend to devote myself to, and that is the total exclusion of all foreigners from Zu-Vendis. Not, indeed, that any more are ever likely to come here; but if they do, I warn them fairly that they will be shown the shortest way out of the country. I do not say this from any sense of inhospitality, but because I am convinced of the sacred duty that rests upon me of preserving to this, on the whole, upright and generous hearted people the blessings of comparative barbarism. Where would all my brave army be if some enterprising rascals were to attack us with field guns and Martini-Henrys? I cannot see that gunpowder, telegraphs, steam, daily newspapers, universal suffrage, etc., have made mankind one whit the happier than they used to be, and I am certain that they have brought many evils in their train. I have no fancy for handing over this beautiful country to be torn and fought for by speculators, tourists, politicians and teachers, whose voice is as the voice of Babel, just as those horrible creatures in the valley of the underground river tore and fought for the body of the swan; nor will I endow it with the greed, drunkenness, new diseases, gunpowder and general demoralization which chiefly mark the progress of civilization among unsophisticated peoples. If in due course it pleases Providence to throw Zu-Vendis open to the world, that is another matter, but of myself I will not take the responsibility, and I may add that Good entirely approves of my decision. Farewell.

December 15, 18—. HENRY CURTIS.

P. S.—I quite forgot to say that about nine months ago Nyleptha (who is very well, and, in my eyes at any rate, more beautiful than ever) presented me with a son and heir. He is a regular curly haired, blue eyed young Englishman in looks, and though he is destined, if he lives, to inherit the throne of Zu-Vendis, I hope I may be able to bring him up to become what an English gentleman should be, and generally is—which is to my mind even a prouder and a finer thing than being born heir apparent to the great house of the Stareway, and, indeed, the highest rank that a man can reach upon this earth. H. C.

### NOTE BY GEORGE CURTIS, ESQ.

The MS. of this history, addressed to me in the handwriting of my dear brother, Henry Curtis, whom we had given up for dead, and bearing the Aden postmark, reached me in safety on December 20, 18—, or a little more than two years after it left his hands in the far center of Africa, and I hasten to give the astonishing story it contains to the world. Speaking for myself, I have read it with very mixed feelings, for though it is a great relief to know that he and Good are alive and strangely prosperous, I cannot but feel that for me and for all their friends they might as well be dead, since we can never hope to see them more.

They have cut themselves off from old England and from their homes and their relations forever, and perhaps, under the circumstances, they were right and wise to do so.

How the MS. came to be posted I have been quite unable to discover, but I presume, from the fact of its being posted at all, that the little Frenchman, Alphonse, accomplished his hazardous journey in safety. I have, however, advertised for him and caused various inquiries to be made in Marseilles and elsewhere with a view of discovering his whereabouts, but so far without the slightest success. Possibly he is dead and the packet was posted by another hand, or possibly he is now happily wedded to his Annette but still fears the vengeance of the law and prefers to remain incognito. I cannot say. I have not yet abandoned my hopes of finding him, but I am bound to say that they grow fainter day by day, and one great obstacle to my search is that nowhere in the whole history does Mr Quatermain mention his surname. He is always spoken of as "Alphonse," and there are so many Alphonses! The letters which my brother Henry says he is sending with the packet of manuscript have never arrived, so I presume that they are lost or destroyed.

GEORGE CURTIS.

THE END.

—Observations made at sixty-seven meteorological stations in Spain, show that the annual rain-fall differs enormously in different localities, it being no less than 138 inches on the Serra da Estrella, and only eleven inches at Lerida, in Catalonia. The minimum rain-fall occurs at all stations in July and August, and the maximum fall occurs at some stations in May, and at others in October.

### USING THEM FOR EVERYTHING.

Peter Magerus, residing at 251 Johnson Avenue, Brooklyn, E. D., N. Y., says:

During the last eighteen years I have been using over fifty ALLCOCK'S PLASTERS a year in my family. I have found them a most perfect external remedy. They have repeatedly cured me of rheumatism, to which I am subject every winter. They have cured me of pains in the sides and back three times. My wife, children and mother-in-law tell me ALLCOCK'S PLASTERS are the best remedy ever made, so agreeable, so certain. I know they have cured my wife of pains in the back and of a severe cough. My mother-in-law has been cured of a most severe cold, which threatened to turn into pneumonia, by ALLCOCK'S PLASTERS. PETER MAGERUS.

It is no vanity for a man to pride himself upon what he has honestly got and prudently uses.

### WOMAN'S MODESTY.

Many women are prevented by feelings of delicacy from consulting a physician in those disorders arising from functional derangement of her peculiarly delicate organism, and the most serious results are often caused by this neglect. To such persons Dr. Pierce's Favorite Prescription is an especial boon, as it offers a sure and safe cure for all those distressing disorders to which women are peculiarly subject, while it saves a modest girl or woman from the embarrassment of a personal consultation with a physician. "Favorite Prescription" is the only medicine for woman's peculiar weaknesses and ailments, sold by druggists, under a positive guarantee from the manufacturers, that it will give satisfaction in every case, or money will be refunded. See guarantee on bottle wrapper.

Wisdom adorneth riches and casteth a shadow over poverty.

Try Germea for Breakfast.

## FACTS ABOUT LEPROSY.

### Chicago Physician Gives an Interesting Outline of the Disease.

"Leprosy," said the doctor, "is roughly divisible into two great types, 'tubercular or 'black,' and anæsthetic or 'white.' In the first spots of pale red or dark-brown color appear on the back, hands, feet, palms, soles, forehead and cheeks. The face first becomes livid, then swollen and discolored. The 'white' leprosy is characterized by water-blisters, at first, which break and leave a whitish scar. The scar is first the seat of stinging pain, afterward succeeded by complete loss of feeling. The disease lasts a long time and the patient dies in the 'white' form from simple exhaustion; in the 'black' death is usually caused by blood-poisoning. The disease is due to a bacilla, or minute, flat, needle-like germ. This must find its way into a cut surface to become contagious. The disease, hence, spreads slowly.

"Leprosy has always existed in the United States since the Louisiana purchase. It did not spread much after the war. The Creoles gave it to their negroes. Several cases recently reported from Louisiana occurred among persons of Irish birth or descent. The Chinese and the Scandinavians, and, perhaps, the Sandwich Islanders, are the chief sources of leprosy in the United States. The Chinese brought it to New York and California and through the practice of opium-smoking introduced by them caused several cases of infection among the whites who had sore mouths. In the Sandwich Islands the lepers are all isolated on one island. A self-sacrificing, heroic Jesuit, who went to this island, has become infected in consequence of his heroic philanthropy. The Scandinavian cases reported from Iowa and Minnesota have not infected any person as yet. The leper colony at Tracadie in the Dominion of Canada has not spread the disease, which has existed there for more than a century.

"There is no law in Illinois specifically requiring the report of this disease, although the ordinary contagious disease law has been construed into requiring its report in Philadelphia and St. Louis. The disease is easily kept in check by requiring the isolation of each case. The importation of these cases should be prevented, and the disease should be added to those requiring special report. Most reputable physicians would report such cases anyway, but the cure-all quacks won't. Chaulmoogra oil and strychnine give good results in treatment.

"All Scandinavians coming from certain districts in Norway and Sweden should be carefully inspected on landing in America, since, as Danielssen and Boeck, the great Norwegian authorities on leprosy, have said, 'the disease can be made harmless only by isolation.' The Chinese are, however, much more liable to spread the disease than the Scandinavians, who become excellent American citizens in a very short time, since their institutions and modes of thought are very like those of the United States. The ready assimilation of the Scandinavian is not surprising, considering the fact that there is an enormous admixture of Scandinavian blood in the Anglo-Saxons, who practically rule the United States. The law-abiding Scandinavian will readily submit to restraint, but the opium-smoking Mongolian won't, and from them will come the danger."—*Chicago News.*

### Putting Out Fires.

An English fireman writes to The London Fireman his belief that fires may be put out by a mixture of plaster of paris and alum. His plan is to throw the mixture confined in a combustible bag upon the fire. An incombustible pulley block, to haul up the bag, must necessarily be affixed to every building to render his plan practicable.—Frank Leslie's.

### A Powerful Arc Light.

What Englishmen say is the most powerful arc light in the world is in a lighthouse on the Isle of Wight. It is of 60,000 candle power, increased by concentrating lenses to 6,000,000 candle power.—New York Sun.

### IRREGULAR ACTION

Of the bowels, means constipation, constipation means misery. Overcome both by using HAMBURG FIGS, which have been specially prepared to obviate this derangement of the natural functions of the body. Hamburg Figs will be found pleasant to the taste of women and children, and an effective remedy for indigestion, piles and billiousness. 25 cents a box at druggists. Dose, one Fig.

HAMBURG FIGS.

It is often very difficult to tell what kind of a laxative to give a very young child who is suffering from constipation. The only medicine which is at the same time perfectly safe and pleasant to take is Hamburg Figs. Dose, one Fig; 25 cents a box.

Are you feeble in health? Try Dujardin's Life Essence. You will find your strength restored, and instead of depression of spirit, you will feel the energy of youth. It will act well in both old and young. Price, $1.50 a bottle. All druggists.

God hates your sneakin' creatures that believe
He'll settle things they run away and leave.

### SYMPTOMS OF CATARRH.

Dull, heavy headache, obstruction of the nasal passages, discharges falling from the head into the throat, sometimes profuse, watery, and acrid, at others, thick, tenacious, mucous, purulent, bloody and putrid; the eyes are weak, watery, and inflamed; there is ringing in the ears, deafness, hacking or coughing to clear the throat, expectoration of offensive matter, together with scabs from ulcers; the voice is changed and has a nasal twang; the breath is offensive; smell and taste are impaired; there is a sensation of dizziness, with mental depression, a hacking cough and general debility. If you have all, or any considerable number of these symptoms, you are suffering from Nasal Catarrh. The more common, dated your disease has become, the greater the number and diversity of symptoms. Thousands of cases annually, without manifesting half of the above symptoms, result in consumption, and end in the grave. No disease is so common, more deceptive and dangerous, or less understood, or more unsuccessfully treated, by physicians. Five hundred dollars reward is offered by the manufacturers of Dr. Sage's Catarrh Remedy, for a case of catarrh which they cannot cure. Remedy sold by druggists, at only 50 cents.

No sutler habit of evil is there in the world than that of self-pity.

### WHICH WAS IT? BACON OR SHAKESPEARE.

The authorship of the dramatic productions attributed to the last of the above named is agitating literary circles to the very centre, but effects the practical masses far less than the momentous question, how to regain or preserve health, that essential of bodily and mental activity, business success and the spirit of happiness." We can throw far more light on this latter subject than the most profound shakespearian can on the question first propounded. If the system is depleted, the nerves shaky; if indigestion or constipation bothers one at times, or constantly; if the skin is yellow and tongue furred as in biliousness; if there are premonitory twinges of oncoming rheumatism or neuralgia; if the kidneys are inactive—use Hostetter's Stomach Bitters, the finest recuperant of an age prolific in beneficial and successful remedies. Remember, if malaria threatens or afflicts, that it neutralizes the poison and fortifies the system.

A willful falsehood is a cripple, not able to stand by itself without another to support it. It is easy to tell a lie, but it is hard to tell only one lie.

White Elephant of Siam, Lion of England, Dragon of China, Cross of Switzerland, Banner of Persia, Crescent of Egypt, Double Eagle of Russia, Star of Chili, The Circle of Japan, Harp of Erin.

To get these buy a box of the genuine DR. C. MCLANE'S CELEBRATED LIVER PILLS, price 25 cents, and mail us the outside wrapper with your address, plainly written, and 4 cents in stamps. We will then mail you the above list with an elegant package of oleographic and chromatic cards. Fleming Bros., Pittsburgh, Pa.

The greatest works have been done by the units, and I would rather choose the solitary hero in truth than to go with the majority to do the evil.

### "CONSUMPTION CAN BE CURED."

Dr. J. S. Combs, Owensville, Ohio, says: "I have given SCOTT'S EMULSION of Cod Liver Oil with Hypophosphites to four patients with better results than seemed possible with any remedy. All were hereditary cases of lung disease, and advanced to that stage when Coughs, pain in the chest, frequent breathing, frequent pulse, fever and Emaciation. All these cases have increased in weight from 16 to 28 lbs., and are not now needing any medicine."

INFANTILE Skin & Scalp DISEASES cured by CUTICURA Remedies.

FOR CLEANSING, PURIFYING AND BEAUTIFYING the skin of children and infants and curing torturing, disfiguring, itching, scaly and pimply diseases of the skin, scalp and blood, with loss of hair, from infancy to old age, the CUTICURA REMEDIES are infallible.

CUTICURA, the great Skin Cure, and CUTICURA SOAP, an exquisite Skin Beautifier, externally, and CUTICURA RESOLVENT, the new Blood Purifier, internally, cure every form of skin and Blood Diseases, from pimples to scrofula.

Sold everywhere. Price CUTICURA, 50c.; SOAP, 25c.; RESOLVENT, $1. Prepared by the POTTER DRUG AND CHEMICAL CO., Boston, Mass.

## SEASONING TIMBER.

**The Proper Treatment of Wood Intended for Building Purposes.**

The following, by Mr. B. E. Fernow, chief of the Forestry Division of the Department of Agriculture, published in a recent bulletin, will interest those who contemplate building or need to use well-seasoned timber for any purpose.

With proper after-treatment of the wood the time of felling seems not to affect its durability. Early winter felling (December) should have the preference, because less fermentable sap is then in the trees, and the timber will season with less care, more slowly and more evenly, and before the temperature is warm enough for fermentation to set in. If the wood is cut "in the sap" it is more liable to fermentation and to the attacks of insects, and more care is necessary in seasoning; for the rapid seasoning, due to the warm dry atmosphere, produces an outer season coat which envelops an unseasoned interior liable to decay. When cut in the leaf it is advantageous to let the tree lie full length until the leaves are thoroughly withered (two or three weeks) before cutting to size. With conifers this is good practice at any season, and if it can be done, all winter-felled trees should be left lying so leaf out in the spring, by which most of the sap is worked out and evaporated.

Always remove the bark from felled timber to aid seasoning, but not from the standing tree.

Never allow the log to lie directly on the moist soil.

If winter-felled, shape the timber to size within two weeks after felling and leave it placed on blocks, not upon the soil, in the forest, or if shaped at home place in a dry, airy, not windy, position away from the sun and rain.

If dried too rapidly wood warps and splits, the cracks collect water and the timber is then easily attacked and destroyed by rot.

With large logs checking may be prevented by coating the ends with some fatty or oily substance mixed with brick dust, or covering with a piece of linen, cloth, or even paper, or by simply shaking them to lessen evaporation; cracks on the sides may be filled in with tow or cotton.

When piling timber, place laths or sticks of uniform size at uniform distances under each log or post or tie.

Sufficiently thorough seasoning for most purposes is obtained in twelve to eighteen months, while for special work, according to the size, from two to ten years is required.

The best method of obtaining proper seasoning without costly apparatus in shorter time is to immerse the prepared timber in water from one to three weeks to dissolve the fermentable matter the surface. This is best done by running water—if such is not at hand, a bath may be substituted, the water of which needs frequent change. Timber so treated, like raft timber, will season more quickly and is known to be more durable.

If practicable the application of boiling water or steam is an advantage in leaching out the sap.

Never apply paint or any other coating to green or unseasoned timber.

If the wood was not well dried or seasoned the coat will only hasten decay.

Good coatings consist of oily or resinous substance, which make a smooth coat, capable of being uniformly applied; they must cover every part, must not crack, and possess a certain amount of plasticity after drying.

Coal tar, with or without sand or plaster or pitch, especially if mixed with oil of turpentine and applied hot (thus penetrating more deeply), answers best. A mixture of three parts of coal tar and one part clean, unsalted grease, to prevent the tar from drying until it has had time to fill the minute pores, is recommended. One barrel of coal tar will cover 800 posts. Wood tar is not serviceable because it does not dry.

Oil paints are next in value. Boiled linseed oil or any other drying vegetable—not animal—oils, are used with lead or any other body (like pulverized charcoal) to give substance. Immersion in crude petroleum is also recommended.

Charring of those parts which come in contact with the ground can be considered only as an imperfect preservative, unless a considerable layer of charcoal is formed, and if it is not carefully done, the effect is often detrimental, as the process both weakens the timber and produces cracks, thus exposing the interior to ferments.

—Lawyer—"I had to compromise that case in which I sued Smith for $500 for you." Client—"Couldn't you get the full $500?" Lawyer—"No; I could only get $200." I agreed that we would take $200 and pay the costs." Client—"Well." Lawyer—"As I said before I agreed to take the $200." Client—"But where is my share?" Lawyer—"Well, I agreed for you to pay the costs. I couldn't settle any other way."—*Arcola (Ill.) Record.*

—"Dear wife," said a dying husband, "if you do marry again, wait at least until the grass is growing on my grave." The widow promised faithfully that his wish should be respected. About two weeks after the funeral the widow visited the grave, and pressing a gold coin in the sexton's hand, said: "Can't you have this grave sodded without delay."—*Texas Siftings.*

—Farmers say honey is their only product that is free from vermin. Let due credit be given the bees for this. They certainly take great pains to comb it.—*Binghamton Republican.*

## GATLING'S INVENTION.

**A New and, If Successful, Priceless Method of Casting Heavy Guns.**

Dr. R. J. Gatling, the inventor of the gun which bears his name, and which has been in use in nearly every country which uses the arms of modern civilization in its warfare, has invented a new method of making heavy ordnance, which, it is claimed by his friends, is calculated to revolutionize the gun-making industry of the world. One or two attempts have been made in this country to cast guns of solid steel, and bore them out afterward, but they have been practically steel ingots bored out, and none of them have yet been shown to be sufficiently perfect to meet the requirements which heavy ordnance should fulfill. Dr. Gatling's invention, which is already patented in this and several other countries, consists in making guns cast from the highest grade of steel, in such a manner as to shape around a central core which is formed by the casting instead of being left to the work of the borer, and this central core is utilized for the purpose of cooling the casting from the interior outward before the exterior cools, as in the ordinary gun casting. By the new process Dr. Gatling makes the metal cool gradually on the inside from the surface of the core, while the outside of the casting is kept at a high temperature. The metal is thus forged, so to speak, by its own action from the interior outwardly, and the creation of a hard, resisting arch on the exterior of the casting, at which point the full force of the high power exercised by the exploding ingredients within the gun exerts itself, is thus avoided. Of course the method by which Dr. Gatling secures the cooling of the gun from the core outwardly is, for the present, his own secret, but if it is as effective and practicable as he claims, and his friends believe, it seems likely to work a wonderful change in the manufacture of heavy guns.

The old way of making guns used by Krupp, Armstrong and other famous manufacturers of ordnance is based on the building-up plan. The gun is cast in many pieces, which are then put together in the proper shape. This is a costly and a long process, many months being required for the completion of every gun. The proposed new Gatling gun, cast of solid steel around a central core, and allowed to cool by the new process at the same gradual rate in all parts of the entire piece, can be finished, it is claimed, in about two months and at a much less cost of money and labor than that required for the Krupp or any other gun now made. The advantage of casting the cannon in one piece, instead of building it from several pieces, is apparently a great one, which can be understood by anybody having the slightest idea of the work of casting ordnance. Preparations are now being made to cast two six-inch guns by the new process and test them thoroughly, and Dr. Gatling is confident that their superiority will be established at once. When the guns are ready representatives of foreign Governments as well as our own will be invited to witness the tests, and it is hoped they will be so successful as to demonstrate the thorough superiority of the new Gatling system over any other in the world and will result in the transfer of the gun-making industry from Europe to America.

Dr. Gatling's invention also covers the use of certain other metals in combination with the steel, which, it is claimed, will impart more homogeneity and strength to the steel. The compound will have a power of resistance greater than that of any metal thus far known or used in the manufacture of guns. A company has already been formed with the object of establishing a manufactory for the new Gatling.—*N. Y. Times.*

## A WORD TO GIRLS.

**Humble Duties That Are Prime Factors in Making Home Happiness.**

Sweeping, gardening, dusting and bed-making are among the humble duties that make up the routine of home work. They are not calculated to stimulate the intellect or make brilliant minds, but they are prime factors in making home happiness, for they teach order, neatness and consideration for others, without which no woman can be a true lady. The girl who refrains from lending assistance which will promote the comfort of others, on the score of it being beneath her, as a lady, has a very poor idea of the meaning of the word—and a nature so innately vulgar that no amount of fashionable veneering can hide the warping of a telfish mind. If girls only knew much more attractive they could make themselves by assuming some of the cares of this work-a-day world this reluctance to be thought a worker would vanish.

Girls are full of kindly impulses, which a word or two at the right time will bring out. The besetting sin of the women of the nineteenth century is misdirected energy, too much solicitation for affairs outside of home, and a love of luxury which threatens to efface the sturdy honesty which grasps every duty and raises it to virtue through the force of its own integrity of purpose. Our girls have all noble qualities which youth can be expected to possess. When false ideas have given place to the practice of those little things that go so far toward making home the happy place which influences so many destinies the world will be all the better, girls, though your hands may not be so white, and—sweeping will be an every day occurrence.—*Detroit Tribune.*

## OF GENERAL INTEREST.

—A Philadelphia dancing master, who has just returned from an extended trip abroad, says that everywhere on the continent of Europe Americans are considered the best dancers in the world.

—The old-time, delicate soap-bubble watch crystals have gone out of date for ordinary watches, and the introduction of thick crystals is driving out the hunting-case in favor of open-faced watches.

—The pug dog as a pet had an interesting origin. He was first imported from China and Japan and came into fashion in the reign of William III. It is stated that the King believed his life to have been saved by a dog of this breed awakening him to his danger when a murderous attack was about to be made on the Prince.

—A fakir in the West is advertising a recipe which will tell you how to make your horse an artist. When you forward him a dollar, not necessarily for publication, but as an evidence of good faith, you receive by return mail a neatly printed card bearing the words: "Give your horse drawing exercises and he will get there. Ta Ta."

—A burglar who stole a meerschaum pipe in Chicago returned it to the owner with a polite note begging him to color it artistically and leave it where it would be handy to get at. "Professional duties," added the gentlemanly burglar, "prevent me from giving proper attention to the coloring of this pipe, and I think I can trust you to do the work well."

—A man near Fayetteville, Tenn., built a fire one cool morning lately, and in a little while saw a pair of big black feet drop down the chimney. A little search revealed a colored neighbor of bad reputation stuck fast in it, and upon being released said that, owing the householder ten cents, he had come to pay it, and finding doors and windows fast, chose this mode of entrance; but as his shoes and axe were left outside, his tale was not credited, and he was sent off to jail.

—A Chicago gentleman of wealth and eccentricity has four fine children, the eldest ten years old, and he has named them One, Two, Three and Four. His explanation of this curious nomenclature is that he had so often seen the great dissatisfaction of children with names bestowed upon them that he resolved to simply number his off-spring until they were twelve years old and then let them select their own names. The children are pleased with the idea, and are great students of names.

—Sealskins when worn by the seals themselves are very different in appearance from those which have been fabricated into ladies' cloaks. The fur is not visible, but it is concealed by a coat of stiff overhair, dull, gray-brown and grizzled. The overhair has to be removed by a long, laborious process, and this work, according to the thoroughness with which it is done, largely determines the value of the skin. Skins from two to four years old weigh from five and one-half to twelve pounds.

—Tobacco blindness, it is said, is becoming a common affliction. At present there are several persons under treatment for it at one London hospital. It first takes the form of color blindness, the sufferers, who have smoked themselves into this condition, being quite unable to distinguish the color of a piece of red cloth held up before them. Sometimes the victim loses his eyesight altogether. Tobacco, being narcotic, naturally benumbs the nerves. When the nerves are thus benumbed people do not see as distinctly, and this defectiveness of vision tends to increase and become permanent.

## SMALL PLEASURES.

**The Advisability of Enjoying the Delights of Life as They Come.**

The delights of life, like pleasant days through the year, are scattered all along the way, and unless we enjoy them as they come, the opportunity once past never returns. It is all very well to provide for a rainy day, but that man who should allow himself to be soaked by drenching rains that he might save his umbrella for some possible future storms would be considered by most folks very foolish. Why should we live more in the future than in the present? We live poor that we may die rich. We get all ready to be happy, and when we are quite ready, infirmity or disease or death steps in, and the chance to take comfort in this life is gone. If we could be content to enjoy the little pleasures that lie within our daily pathways, they would make a large sum total at the end of three-score and ten. We are apt to scorn pleasures that are cheap and near and within our grasp, and complain because we can not have such as are costly and remote and inaccessible. If we would magnify the little things that make life pleasant as we do those that make life unpleasant, the cup of our joys would continually overflow. We complain of cloud and storm, but are our rejoicings over sunshine and fair weather equal to our complaints? We grieve at the coldness of a friend, but do we value fully the cordiality of those who are true to us? We count the hours when sickness prostrates us, but how many days of health pass utterly unnoticed and without thanksgiving! We mourn passionately for the dead, while we neglect the living whom to-morrow, being dead, we may yet more passionately mourn.

We are exhorted "in every thing to give thanks." If we cultivate a thankful spirit, if we count the mercies, we shall always have cause for abundant rejoicing.—*Christian Advocate.*

## PERSONAL AND IMPERSONAL.

—Southern women are said to have taken the lead of their sex in money-making in New York. The head of the richest firm of dressmakers is a Southern woman, and women of Southern birth come to the front in other directions.

—Mrs. Maxwell Scott, a great granddaughter of Sir Walter Scott, is the present owner of Abbotsford. She wishes to rent the house for a term of years, but it is difficult to find a tenant, as the place is continually overrun with tourists.

—Cornelius Vanderbilt and Elliot F. Shepard, of New York, allow each of their six children a certain amount of pocket money each month, and they are all required to keep cash accounts and present them to their papas the first of each month.

Alfred C. Hobbs, of Hartford, Conn., is seventy-six years old. He is the man who succeeded in picking every lock placed before him at the Crystal Palace, London, in 1851, and won one thousand dollars offered by an English firm to any one who could pick the lock they manufactured.

—Dr. W. L. Candee, of Milwaukee, Wis., who is nearing the century mark in life, saw the first steamboat ascend the Hudson and rode upon the first railroad built in the United States—between Albany and Schenectady. He was intimately acquainted with Robert Fulton, the inventor of steamboats.

—The widows of four Presidents of the United States, Mesdames Polk, Tyler, Grant and Garfield, are receiving Government pensions of five thousand dollars a year. The widows of three Major-Generals, Mesdames Blair, Hancock and Logan, are receiving pensions of two thousand dollars a year. The widow of General Sheridan will come between the two, with a pension of thirty-five hundred dollars.

—A Chicago paper observes of Mrs. Cleveland: "Standing in the gaze of the world, where every word of hers is chronicled, every gesture reported and every article of dress itemized, she has made no mistake, incurred no censure, provoked no criticism. Not only that, but so wise is her life and so prudent her conduct, that eager, hostile eyes have been able to discover no word or act on which to hang the envious 'tittle-tattle' of brainless society."

—Sir Morell Mackenzie, the late German Emperor's medical adviser, is greatly interested in vocalization and in every thing that pertains to the human voice. He never takes a fee from an artist, but doctors the throats of the fraternity for nothing. If there chances to be any thing peculiar in the shape of a singer's throat or in the timbre of his voice, Dr. Mackenzie desires, as a personal favor, to make a personal examination thereof. He is acquainted with and has prescribed for all the great singers of Europe.

## "A LITTLE NONSENSE."

—Kentucky teacher (of infant geography class)—"Tommy Blood may tell us what a strait is." Tommy Blood—"It's jest the plain stuff 'thout nothin' in it."—*N. Y. Sun.*

—An economist exclaims that three cigars a day will supply a family with meat. The economist has evidently got his facts mixed. He means cabbage.—*Binghamton Republican.*

—"The world is mine!" exclaimed the tragedian in Monte Cristo, and the comedy man waiting for eight weeks' back salary, murmured faintly: "Cut me off a piece of New York, please."—*The Idea.*

—Amateur athlete—"I want a pair of nice, light, easy shoes, suitable for a jumping match." Dealer—"I vil show you dot very ding, made for shumping. See dot name on dot box? Id is called de 'Kangaroo.'"—*The Cartoon.*

—"'Twenty Years a Whaler,'" said the old Arkansas schoolmaster, reading, with a contemptuous pucker of his lips the title of a new book. "'Twenty years! I kin beat that record more'n fifteen year, b' gosh!"—*Chicago Tribune.*

—"What kind of food is alumni?" asked Mrs. Snaggs. "It isn't food at all," replied Snaggs. "O, yes, it must be, because six people at Marietta have died through being poisoned at an alumni dinner."—*Pittsburgh Chronicle-Telegraph.*

—Farmer—"Hi, there! Can't you see that sign—'No fishing on these grounds?'" Colored Fisherman—"Co'se I kin see de sign. I'e cullud, boss, but I ain't so ignerant as to fist on no groun's. I'm fishin' in de crick!"—*Texas Siftings.*

—Mrs. Hennessy—"Sure, Patsy, darlint, it's afraid Oi am that Oi'll overshlape in the marnin', an' be too late for early mass." Mr. Hennessy—"Doan't trouble, at all, Mary Ann. Av you foind yoursilf overshlapin', tech me, an' Oi'll wake you at wanst."—*Tome.*

—Precious Stranger (to Texan bartender)—"I'm the wolf! There's only one of me and this is my day to howl!" Bartender (calmly, but firmly)—"Well, I'm the father of triplets, and every day in the week is their day to howl. So you just howl away; I'm used to it." The wolf retreated.—*Texas Siftings.*

—Preacher (at waifs' mission)—"Yes, my dear children, you little know of the blessed influences which now surround you. My son is here with me to-day, and I will ask him for a leaf from his own experience. Stand up, my son, and speak so all the children can hear you. How were you led to the Sabbath-school?" Preacher's son (fiercely)—"By the car."—*Philadelphia Record.*

## WORK AND WORKERS.

**Useful Suggestions Concerning Recent Inventions and Devices.**

A clever little device, designed for the use of tailors, has been perfected. It is a flat iron which utilizes the principle of expansion of metals by heat, so that when the iron is hot enough for use a little bell rings, apprising the tailor of the fact.

Most combination tools are so clumsy that carpenters have generally abandoned them as wasting time instead of saving it. One tool, however, of recent invention, is handy and simple, and likely to become of great service. It is a piece of steel or other material cut so as to form a square, miter or trisquare.

A Swiss inventor has perfected a method of making artificial boards, and is advocating their use in building. They are made of a mixture of plaster of paris and reeds pressed into shape by hydraulic presses. The material has the advantage of incombustibility and lightness, and will resist the warping action of atmospheric changes.

An important innovation in railway practice is the device of a Baltimore electrician for welding steel rails by electricity, a method which will admit of the laying of a continuous track. After they are placed on the track the rails are to be welded by means of a transformed electric current. They may then be tempered so that the joint will be as hard as the rest of the rail.

It will not be long before the shoemaker can add to his stock of raw materials a waterproof leather. The process, which has been recently perfected, is not only of service on the uncut leather, but can be used in rendering worthless leather valuable by stuffing, stiffening and waterproofing it for insoles, counters, box toes, etc. Every part of a boot or shoe can be "waterproofed" either before or after it is finished.

According to the *Journal des Debats*, a society for the construction of artisans' dwellings at Rouen has been formed. It has already erected six buildings, accommodating altogether ninety-five families. The rents are low and the sanitary arrangements as nearly perfect as they can be made. A feature of the enterprise is the establishment of a local savings bank, where the trades people may put away in safety what proportion of their wages they do not spend. But even with this advantage it will be a long time before France can vie with England in provision of sanitary dwellings for working people.

Dry goods merchants appreciate the services of an employe who is a good window-dresser. Many firms keep a man who does nothing else, but the majority of dry goods and furnishing houses depend upon the taste and good sense of their clerks. Two things are necessary to the making of a good window-dresser—a sense of color in masses and in contrasts, and the ability to appreciate the value of repeated forms. Such colors, for instance, as yellow and black, repeated in gloves and stockings, say, are very striking and catch the eye. Red and black are also good, although, of course, the variety of color combinations is endless. A skillful window-dresser is a valuable person, and his wages are by no means small.

Cabinet-makers who keep on hand a stock of fine woods are frequently annoyed at the destructive operations of rats. Traps are ineffectual, rat poison is not much better besides being unhealthy to have around, and, no matter how carefully the holes be stopped and the base-board and quarter-round be underlaid with tin, the rats find some way of getting in and pursuing their work of destruction. A New York cabinet-maker waxed exceeding wroth the other day, however, on finding a particularly choice piece of old oak gnawed into the semblance of a bit of Italian filigree work, and he set about discovering some means of ridding himself of the pest. He soaked a number of newspapers, kneaded them into pulp, and dropped the pulp into oxolic acid. Before leaving the shop at night he put the pulp, while wet, into every nook and cranny through which a rat could possibly squeeze. The plan worked. After a few nights of sore feet and sorer noses the baffled and disgusted rodents decamped from the premises en masse.—*Chicago News.*

—The discussions with regard to the substitution of electricity for the gallows in the execution of criminals have brought to mind the experiments of old Dr. Franklin made more than a hundred years ago. He put various animals to death with electricity, but found that it was not always sure to kill. In one experiment, when he attempted to kill a turkey with electricity, the fowl escaped, but the old doctor came near killing himself. This has been the experience of many others who have attempted similar experiments since Franklin's day.

—"Well, I declare, Maria," said Mr. Bentley, his head concealed behind the newspaper. "Who do you suppose this man Brown, the boy preacher, is?" "I don' know," said Mrs. Bentley, excitedly. "Who is he?" "Why, he's Brown, the boy preacher." And the coolness that arose between husband and wife chilled the waitress to the bone.—*Harper's Bazar.*

—The dog-days are said to last only through August. Now as there are but thirty-one days in August, and likewise as it is undeniably true that every dog has his day, there can be but thirty-one dogs in the world. Somehow or other we had supposed there were more.—*Harper's Bazar.*

## DUNDER CATCHES ON.

**The Old Teutonic Philosopher Takes a Hand in Politics.**

"You are looking well, Mr. Dunder," said Sergeant Bendall, as he looked up from his desk yesterday and found the latter at his elbow.

"Sergeant, I vhas so well I vhas like a giraffe."

"Been swindled again, I suppose?"

"No, sir!"

"Well, what is it?"

"I vhas going to run for some aldermans in my ward."

"Into politics, eh?"

"I haf caught on, und next year you vhill see me in der Common Council. I shust find oudt how dot American politics vhas, und I don't be surprised if I vhas Gofernor some day."

"So you are pulling wires?"

"Dot vhas it. Vhen a voter comes in my place, I treat him mit a glass of lager und say: My frendt, I like to go by der Common Council as some aldermans. I like you to wote for me. If you do, I make you engineer in der city hall at two tousand dollar a year."

"Whew! But how can you do it?"

"I can't do her; but dot makes no deeference. Der object vhas to get his wote. Dot vhas der American plan. Dot feller vhas so teeckled he can't wait for election day. I promise dot shob to more ash one hoonered feliers, und eafery one vhill wote for me."

"That's pretty good. Any other strings?"

"More ash twenty. I goes oudt for a leetle walk. A citizen vhas leaning on his gate, und I shpeak to him:

"'Good eafning py you, mister. How vhas her dot you doan' have some pavements here? Too expensive, eh? Neafer you mind. I shall run for some aldermans dis year, und I vhas no sooner in dot council den I make der city pay for all paving.' Dot opens his eyes. He says he vhill fix in ten votes for me."

"But you can't do any such thing, you know."

"Of course I can't, but dot vhas no deeference. It vhas shoost like all der aldermans do. If dey doan' do so nopody vhas elected."

"Well, that's so. Any thing more."

"I vhalks around some more, und I comes py der place vhere a gang vhas at work for der city. I wipe avhay some tear und say:

"'How many hours do you work, poor man?'

"'Eight.'

"'Und how mooch pay?'

"'Fourteen shillings.'

"'Donder und blitzen, but you doan' tell me? Vhell, dot shall be fixed. I goes py dot Common Council next year, und I make sefen hours a day's work and der pay vhas three dollars.' Dot makes me one hoonered votes right away, sergeant."

"Yes, I suppose so. Is that all?"

"Vhell, some ward strikers vhas aroundt, you know. I doan' nefer shpeak mit him pefore, but now I takes him py der handt und says:

"My dear poy, I hope I see you well. Somepody says you vhas seek, and I feels werry anxious. We can't spare sooch citizens as you. Say, how you like to be weigh-master up by der eastern market?'

"'Dot vhas good.'

"'Vhell, you can haf her. I vhas going to be some aldermans, und der salary shall be raised $500 a year. Doan' you worry dot I shall not take care of all my friends.'

"And he'll vote for you, of course?"

"Of course. He shust preaks his neck for me."

"But suppose you are elected and are asked to make good your promises?"

"Dot vhas all fixed. I say to 'em dot a committee knocked me out, or dot der president ruled against me, or dot some aldermans haf to look oudt for his sons. I fools 'em like grease."

"Um! Mr. Dunder, you are improving."

"Sergeant, I thank you. Vhen I vhas aldermans I make you a captain, und your salary vhas five thousand dollars a year. Keep dot on your mind und vote for yours truly. Good day."—*Detroit Free Press.*

### A Troublesome Turtle.

Three years ago E. B. Holcomb, of Plantsville, Conn., found something was eating his melons and squashes, but he finally discovered that a big land turtle was the cause. He carried the turtle over by the old canal, and in a few days it was back again in the garden. Then he took it away again, but in a short time it returned. He then made up his mind that he would be rid of it, so he dropped it one day over in Mount Vernon district. He saw no more of the turtle for two years. His neighbor's garden was troubled the next year with what he supposed was a woodchuck, and he set a trap for it without catching any thing. Finally the old turtle was discovered to be the cause of the mischief. Recently Mr. Holcomb's garden proved attractive to the turtle, and he caught and brought it to the river just west of the freight depot. Next week the old turtle was again back in the garden, making a living on cucumbers and squashes. Mr. Holcomb thinks he will separate the head and body next time.—*Boston Herald.*

—Caller—"What has become of your new clerk?" Grocer—"Poor fellow! He wasn't cut out for this business. The second day after he began work an order was received from an uptown lady calling, among other things, for a can of the best baking powder. He went to the baking powder shelf and began studying the labels and circulars to find out which was the best, and when I came in a few hours later he was a raving maniac."—*Cartoon.*

## WOMEN INVENTORS.

**They Are Not a Success, Except in a Few Notable Instances.**

"I want you to tell me something about women inventors," said a reporter the other day to W. R. Baird, who knows all about patents.

"There are none," was the prompt response. "I don't mean that there are absolutely none, for of course that is not the case; but as far as I know no important invention, no improvement in mechanism which has affected industry and altered the conditions of production, has been devised by a woman. There is a queer story connected with one of the best paying things ever gotten up by a woman. It was a corset, and she made money out of it for awhile until imitations sprung up and she was compeled to bring an infringement suit, when the defendants broke her patent by putting her own husband on the stand and compeling him to testify that he had seen his wife wearing her invention four years before the patent was taken out. This the court constructed to be 'public use' within the meaning of the statute which prescribed that a patent upon an article in public use more than two years is invalid. The defendants won, the patent became common property and the bottom of that gold mine was reached. Of course, a good many patents are taken out by women for household contrivances of one sort and another, as their inventive genius naturally runs in that direction; but I do not know of any thing in that line that has amounted to much. Perhaps the pillow-sham holder is one of the best paying of these. There is one trouble about inventions which is calculated to vex and harrow the souls of women, and men, too. They usually, when they think they have an idea, look for similar machines, and, finding none, take it at once for granted that the way is clear. Then they bring their ideas to a specialist and he has to tell them, if he is honest, that the distinctive feature of the supposed invention has already been patented in another entirely different class of machine upon which hers, though used for a different purpose, would be an infringement.

"There is one class of invention," continued Mr. Baird, "which is largely done by women, though this does not appear in the patent office reports. Women make many of the exclusive designs for carpets, prints, oil-cloths and other fabrics, but the designs are almost always filed by the big factory firms who buy them, and the women get no credit for them. I have seen some talks lately in the papers about a woman taking out a patent for shaping barrels, which may turn out, something good, but also may not."

Mrs. Livermore, in one of her witty lectures, used to wonder why some smart woman did not invent a stove which would cook the meat without at the same time cooking the cook. Perhaps that is an impossibility, but it certainly seems as if there was room in the household for inventive genius of women, if they have any, to lighten their own and others' burdens.—*N. Y. Mail and Express.*

## WORDS OF WISDOM.

**A Collection of Wise Sayings by Prominent Thinkers and Writers.**

Idleness is the holiday of foolish women.—*Mrs. Balfour.*

Manners and morals are so nearly allied that they have often been confounded.—*Mary Wollstonecraft.*

Women, especially in domestic life, should learn the great wealth and comfort of frugality.—*Horace Mann.*

The reason why education is usually so poor among women of fashion is that it is not needed for the life which they elect to lead.—*Julia Ward Howe.*

All the molestations of marriage are abundantly recompensed with other comforts which God bestoweth on them who make a wise choice of a wife.—*Fuller.*

Let us do our duty in our shop or our kitchen, the market, the street, the office, the school, the house, just as faithfully as if we stood in the first rank of some great battle, and we knew that victory for mankind depended on our bravery, strength and skill.—*Theodore Parker.*

As a great part of the uneasiness of matrimony arises from mere trifles, it would be wise in every young married man to enter into an agreement with his wife that in all disputes of this kind the party who was most convinced they were right should always surrender the victory, by which means both would be more forward to give up the cause.—*Fielding.*

### An Accommodating Editor.

Facetious Visitor in newspaper office (to Editor)—May I use your brains a moment?

Editor—My brains?

Visitor (smilingly picking up scissors)—Yes, sir. Only a moment. I want to——

Editor (with great cordiality)—Certainly you may. Use them as long as you please. Always glad to furnish brains to a man that hasn't any.—*Chicago Tribune.*

—A jackdaw flew into a church at Monkton, England, during service, and took an active part in the responses, jabbering so merrily that pastor and people were convulsed with laughter. The pastor finally had to order the children to leave the church, they laughed so, and an effort was made to capture the bird, which had lighted upon the reading desk. It flew to the rafters, however, and stayed there until the service ended, chattering all the time.

# INYO INDEPENDENT.

**County Official Paper.**

C. Mulholland,
EDITOR & PRO IETOR.
PUBLISHED EVERY SATURDAY.

INDEPENDENCE, CAL

SATURDAY DECEMBER 15.....1888

Human eyes never looked upon anything so lovely as a human face illuminated by a pure and loving spirit. No beauty is so enduring as the beauty that shines from an unselfish, affectionate soul. This is the beauty that never withers; the flower of Paradise that never fades.

Senator Reagan, of Texas, has offered a bill in the Senate for the free coinage of silver. It provides that all holders of silver bullion of the value of $50 or more shall be entitled to have it coined into standard dollars of 412 1-2 grains troy to the dollar, upon the same terms and conditions as gold is now coined for private parties.

Mr. W. H. Mills is named as likely to have a place in the Cabinet of President Harrison. Mr. Mills has had long experience in duties that would better fit him for the position of Secretary of the Interior than any one who has held that position in many years. Indeed it may well be doubted if anyone ever went into the office so well qualified by experience as Mr. Mills would be.

Congressman Vandever has introduced a bill in Congress for the division of the State and the creation of a new State. The United States Constitution, Article VI, Section 3, provides as follows: "New States may be admitted by the Congress into this Union; but no new State shall be formed or erected within the jurisdiction of any other State; nor any State be formed by the junction of two or more States, or parts of States, without the consent of the Legislatures of the States concerned, as well as of the Congress." Surely Mr. Vandever must have forgotten this provision of the Constitution, or he would first have secured the consent of the Legislature to a division of the State before introducing his bill into Congress. It is reasonably certain that such consent would not be given. The only gain that could possibly follow the division of the State would be more offices for politicians. All but politicians think we have too many offices already.

The title to public land is passing from the Government to individuals with wonderful rapidity. For the year ending June 30th, 1888, title passed to 8,605,194 acres. This is an area greater than the total area of the State of Vermont. At this rate all the public land will soon pass to private ownership. The extent to which land grabbing has been carried is something wonderful. The CALL says an area of 83,158,990 acres—equal to the area of Illinois, Ohio and Indiana combined—has been rescued from its illegal occupants or claimants and restored to the public domain; and a further area of 65,020,538 acres is said by the Commissioner to be likely to be recovered if the case of the people is prosecuted with due energy. Of the area already recovered 28,253,347 acres were comprised in forfeited land grants to railroads, and 29,729,761 acres were recovered from individuals who held under the pre-emption, homestead, timber culture and desert acts, and had lost their rights by abandonment or illegality of some sort. The quantity of land which can be got out of the hands of unlawful possessors and thrown open to settlement is really startling. Not less than 21,660,846 acres are claimed by railroad companies which did not complete their lines within the time specified in the grants.

The folly and wickedness of attempts at lynching were proven in a fearful way in that riot at Birmingham, Alabama, last week. It is not at all certain that the man accused of the crime is guilty; but even if his guilt were beyond dispute he is in jail, and can be dealt with in the regular course of law. A few hot headed, foolish men led a crowd of unthinking followers to break open the jail and lynch the accused man. The Sheriff warned the crowd that he would defend his prisoner; thinking, perhaps, that the officer would not use arms, the crowd attempted to break the jail doors. The Sheriff and his assistants did what was their duty; they repelled force with force. The Sheriff alleges that he did not fire, nor order firing to be done, till several shots had been fired at him and his assistants by the mob. The saddest part of the awful tragedy is that several good citizens who were endeavoring to persuade the mob to go away from the jail were killed. Nothing can justify a lawless attempt to wreak vengeance upon one accused of crime who is already in custody of the officers of the law. If the guilt of the accused is beyond dispute the lawful punishment will surely follow; and if there is doubt of the guilt it is fiendish cruelty to inflict punishment without trial and proof. If all public officers will do their duty as well as this Alabama Sheriff there will be an end of attempts by mobs to break open jails and interfere with the regular course of law in the punishment of criminals.

## Proposals.

Proposals for building a bridge across Bishop Creek at the point known as "Mattick's Ford."

NOTICE IS HEREBY GIVEN THAT IN pursuance of an order of the Board of Supervisors of the County of Inyo, State of California, made the 16th day of November, 1888, the undersigned Clerk of said Board will receive sealed proposals for material and labor to be used in constructing a bridge across Bishop Creek at a point known as "Mattick's Ford" in accordance with the plans and specifications now on file in the office of the County Clerk, which are now subject to inspection until Tuesday, February 5, 1889, at 12 o'clock noon of said day; bids to be opened between the hours of 2 and 4 o'clock p. m. of said day.

SPECIFICATIONS.

Abutments to be built of stone cut square and laid close without mortar, base of said abutments to be not less than four [4] feet wide, fourteen [14] feet long, two [2] feet at the top, by fourteen [14] feet long at top and four [4] feet above low water mark; foundation to be let down at least twelve [12] inches below the bed of said stream. Stringers to be 12x12 inches, 30 feet long (hewn or sawed) five of said stringers to be used and to reach the entire span of 27 feet between the abutments resting on timbers 8x16, 14 feet long, which are to be firmly bedded on top of abutments. Truss frames on outside stringers to be hewn or sawed 8x10 inches, and to be constructed as per sketch marked "A" (in plans). The rods supporting truss to be not less than one [1] inch iron running from top of braces through outside stringer and through cross sills, 8x12, 14 feet long, underneath of stringers, securely threaded on bottom of the same, the foot of braces to be bolted through stringers with one [1] inch bolts. Planking to be 3x10 inches, 14 feet long, securely spiked on to the stringers. All material to be of good quality and to be built in a substantial and workmanlike manner. The person or persons to whom said contract may be awarded shall give a good and sufficient bond in double the contract price, to be approved by the Board of Supervisors, for the faithful performance of said contract. Proposals must be endorsed "Proposals for building bridge across Bishop Creek at the point known as 'Mattick's Ford.' The right is reserved to reject any and all bids.

P. H. MACK,
Clerk of the Board of Supervisors.

## Proposals.

Proposals for building a bridge across Bishop Creek at the point known as "Rowan's Ford."

NOTICE IS HEREBY GIVEN THAT IN pursuance of an order of the Board of Supervisors of the County of Inyo, State of California, made on the 16th day of November, 1888 the undersigned Clerk of said Board will receive sealed proposals for material and labor to be used in constructing a bridge across Bishop Creek at a point known as "Rowan's Ford," in accordance with the plans and specifications now on file in the office of the County Clerk, which are now subject to inspection until Tuesday, February 5, 1889, at 12 o'clock noon of said day; bids to be opened between the hours of 2 and 4 o'clock p. m. of said day.

SPECIFICATIONS.

Abutments to be built of stone cut square and laid close, without mortar, base of said abutments to be not less than four [4] feet wide, fourteen [14] feet long, two [2] feet at the top, by fourteen [14] feet long at top and four [4] feet above low water mark; foundation to be let down at least twelve [12] inches below the bed of said creek. Stringers to be 12x12 inches, 30 feet long, (hewn or sawed) five of said stringers to be used and to reach the entire span of twenty-seven [27] feet between the abutments, resting on timbers 8x16, 14 feet long which are to be firmly bedded on top of abutments. Truss frames on outside stringers to be hewn or sawed 8x10 inches, and to be constructed as per sketch marked "A" (in plans). The rods supporting truss to be not less than one [1] inch iron running from the top of braces through outside stringer and through cross sills 8x12 inches, 14 feet long, underneath of stringers, securely threaded on bottom of same, the foot of braces to be bolted through stringers with one [1] inch bolts. Planking to be 3x10 inches, 14 feet long and securely spiked to the stringers. All material must be of good quality and to be built in a substantial and workmanlike manner. The person or persons to whom said contract may be awarded shall give a good and sufficient bond in double the amount of such contract price, to be approved by the Board of Supervisors, for the faithful performance of such contract. Proposals must be endorsed "Proposals for building bridge across Bishop Creek at the point known as "Rowan's Ford." The right is reserved to reject any and all bids.

P. H. MACK,
Clerk of the Board of Supervisors.

### AN ORDINANCE FIXING AND ESTABLISHING FIRE LIMITS OF THE TOWN OF INDEPENDENCE, COUNTY OF INYO, STATE OF CALIFORNIA.

Be it ordained by the Fire Commissioners of the Town of Independence, in the County of Inyo, State of California, as follows:

SECTION 1. That the fire limits of the Town of Independence, County of Inyo, State of California, be, and the same are hereby fixed and established as follows, to-wit:

Commencing at the north east corner of block No. 1 of the original Town of Independence, as shown by the plat now on file in the Recorder's office of Inyo county, thence south to and including the southeast corner of block number forty-eight of E. Robinson's Addition to the Town of Independence; thence west to the southwest corner of block number forty-three of E. Robinson's Addition to said town; thence northerly to the southwest corner of lot number eleven in block number thirty-one of said original town; thence due north along the section line between sections number seventeen and eighteen, in township number thirteen, south of range number thirty-five east, M. D. M., to the north line of lot number two in block number four of said original town; thence easterly to the place of beginning. Said limits being fully shown by the plats of said original town and E. Robinson's Addition thereto, as the same are filed in the Recorder's office of Inyo county.

SECTION 2. This Ordinance to take effect from and after its passage and filing in the office of the Recorder of said Inyo county.

Which said Ordinance was on the Sixteenth day of November, 1888, adopted by the following vote: A. W. Eibeshutz, aye, A. R. Conklin, aye.

We hereby certify that the above and foregoing is a true and correct copy of said Ordinance as the same was adopted by said Fire Commissioners on the Sixteenth day of November, 1888, and that the same was on the same date filed in the Recorder's office of the County Recorder of Inyo county.

Given under our hands this Sixteenth day of November, 1888.

A. W. EIBESHUTZ,
President of said Board.
A. R. CONKLIN,
Secretary of said Board.

☞ All orders from any part of the country will be promptly attended to, at the most reasonable rates. At the old stand "Monitor" Block.

MISCELLANEOUS.

### ORDINANCE NO 27.

THE BOARD OF SUPERVISORS OF THE County of Inyo, State of California, do ordain as follows:

The following rules and regulations are hereby adopted for the government of the County Hospital of the County of Inyo, State of California, and for the preservation of health within the said county of Inyo.

SECTION 1. All persons on their admission into the Hospital shall deliver to the steward all moneys, articles of value, baggage, etc., except such necessary articles as may be required for immediate use; and the steward shall label them properly and keep them until such time as they may be required, giving the owner a memorandum of the same; and such persons must bathe and change clothes immediately on admission into such hospital, and thereafter on Saturday of each and every week.

SECTION 2. All patients who are able to be up must rise in time and be ready for breakfast; after which they must vacate the wards as far as possible during the day, that the beds furniture and floor of the wards may be cleaned. Every patient able to do so is required to come to the dining room for meals.

SECTION 3. Each and every inmate will be required at all times to perform any duty assigned to them, either as nurse, or assisting about the house, and a refusal to comply will cause an immediate discharge, such duties to be assigned by the steward, or by his orders.

SECTION 4. All employees are required to use the utmost kindness in dealing with the inmates, and under no circumstances will abuse of any kind be tolerated.

SECTION 5. No liquors of any kind shall be allowed to be used by any one, except by order of the physician in charge.

SECTION 6. Card playing, gambling, loud or profane talking, vulgarity or disorderly conduct of any kind is positively forbidden.

SECTION. 7. No inmate will be allowed to leave the premises without permission.

SECTION. 8. Begging from visitors is positively forbidden; also, smoking in the wards without permission; and every inmate is required to use every effort to promote cleanliness.

SECTION 9. Any inmate who shall introduce ardent spirits, cause any nuisance or disturb the house by quarreling or fighting, or behave immorally or disrespectfully, in any manner, or circulate any book, print or pamphlet of an indecent or immoral character, shall be immediately discharged.

SECTION 10. All patients who are able to be up are required to keep their beds and bedside tables in a neat and orderly condition.

SECTION 11. Visitors must not make presents to patients without permission from the steward. This rule has particular reference to fruits, pastry, confectionery and liquors.

SECTION 12. Patients are required to retire at 9 o'clock p. m., at which time all lights unless otherwise permitted, are to be extinguished. No unnecessary conversat on will be permitted in the ward. No candles or other extra lights will be allowed in the ward without the consent of the steward.

SECTION 13. All violations of the above rules by the inmates must be reported to the physician to be dealt with by him or to be reported by him to the Board of Supervisors, at his option.

SECTION 14. The steward shall be subject to the orders of the physician in charge, and any violation of such orders shall be reported by said physician to the Board of Supervisors.

SECTION 15. For the purpose of carrying the provisions of this ordinance into effect the person in charge of said Hospital shall be considered to be the Steward.

SECTION 16. Patients can only be discharged by order of the physician in charge, and the said physician must keep a record of all such discharges, together with the date thereof.

SECTION 17. The Clerk must cause fifty copies of this ordinance to be printed on stiff card board for posting in convenient places, to be designated by the physician in charge of said Hospital.

SECTION 18. This Ordinance shall take effect and be in force on and after twenty-five days from the date of its passage.

SECTION 19. This Ordinance shall be published, with the names of the Board of Supervisors voting for and against the same, in the INYO INDEPENDENT, a newspaper published in said Inyo county, at least two weeks, said publication to be made for said time and before the expiration of said twenty-five days.

J. D. HARGER,
Chairman of the Board of Supervisors of Inyo county, State of California.
Attest: P. H. MACK,
Clerk of the Board of Supervisors.

The above and foregoing Ordinance No. 27 was duly passed, enacted and ordained by the Board of Supervisors of Inyo county, State of California, at a regular meeting of said Board on the 16th day of November, 1888, by the following vote:

Ayes—J. D. Harger, J. R. Eldred and E. Robinson.

Noes—

J. D. HARGER,
Chairman of the Board of Supervisors.
Attest: P. H. MACK,
Clerk of the Board of Supervisors.

[Endorsed.]

ORDINANCE NO. 27.

Filed and recorded November 16th, 1888, in Ordinance Book "B" page 56 et seq.

P. H. MACK,
Clerk.

### NOTICE OF ELECTION.

IT IS HEREBY ORDERED BY THE FIRE Commissioners, of the Town of Independence, that an election of the qualified electors residing within the fire limits heretofore fixed by said Board, be held at the School House in said Town of Independence on the 22nd day of December, 1888, at which time there shall be submitted to said electors whether a tax shall be levied and raised for the purpose of establishing and maintaining a fire department for said town and protecting the same from loss by fire.

At such election there shall also be voted for one person as Assessor and one person as Collector. The same person may be elected to both offices.

At such election the ballots must contain the words "Tax, Yes," or "Tax, No," and the name of one person as Assessor and one as Collector.

The following persons are hereby appointed as officers to conduct said election: John C. Irwin, G. W. Brady and John A. Lack as Judges and J. D. Blair and C. W. Craig as Clerks.

Said election must be held in all respects as nearly as practicable in conformity with the general election law; provided that no new Register shall be required nor legal ballot paper, and provided further that the polls may be opened at eight o'clock A. M., and closed at five o'clock P. M.

The amount required for each specific purpose by the levying of said tax is five hundred and fifty dollars for fire hydrants; two hundred and fifty dollars for fire hose, one hundred dollars for hose carriage; twenty dollars for officers salaries and seventy-five dollars for hose house.

By order of the Board of Fire Commissioners and dated the 19th day of November, 1888.

A. W. EIBESHUTZ,
President of said Board.
A. R. CONKLIN,
Secretary of said Board.

# INYO INDEPENDENT.

INDEPENDENCE, CAL.

SATURDAY, DECEMBER 15.....1888

There is not much time left for doing assessment work on mines.

Mr. F. W. Fratt, of Sacramento, has been in town some days.

Just call at Rhine's and see the display of Fancy Goods for the Holidays. The show is as good as a circus and costs nothing.

Mr. H. L. Clark, Superintendent of the Sunday School at the M. E. Church, is preparing for an entertainment by the school at Christmas.

Orders for borax are coming quite frequently to N. Rhine, of Independence. Some of these orders are from New York. The quantities called for range from ten to fifty tons.

Rev. E. McEvers will preach to-morrow —Sunday—at Lone Pine at 11 o'clock a. m.; Independence 7 o'clock, evening. Sunday school at the M. E. Church at 11 o'clock a. m.

The Central Pacific offer tickets to the Missouri river for thirty-five dollars. Family sleeping cars are provided, furnished with curtains, mattresses, blankets and pillows, with a table in each section free. The traveler is not required to furnish anything, except the money to pay for a ticket.

Darwin continues quite dull. Mr. J. A. McKenzie has five men at work for wages in the Lucky Jim. At the Defiance there are but two men at work. None of the other mines are doing anything worth mention. Over at Slate Range Mr. C. Anthony has a few men at work. They are now taking out ore, having been doing "dead work" for some months past.

Last year California produced twenty million gallons of wine. It is confidently expected that in ten years the product will be increased to one hundred millions. California wines are steadily improving in quality as the quality of soils are more studied and vine culture and wine making are better understood. With improved quality of the wine of course the demand increases.

An experienced orchardist says no kind of fruit tree should be touched with pruning implements after the end of March till the middle of September. Trees should be allowed to sink into the winter sleep completely before any pruning is done. From October till the beginning of March is the proper time for pruning, then the sap is out of the branches and the tree is not weakened by proper pruning.

The warnings of approaching storms and cold weather issued by the Signal Service are of incalculable benefit. These warnings are sent out from twenty-four to forty-eight hours in advance of the storms or cold waves, giving time to make preparation against their destructive effects. Stockmen, farmers, fruit raisers; mariners, railroad and canal men; all these and many others are saved from loss and suffering by the information given by the Signal Sevice.

The Grand Jury made their report and adjourned yesterday forenoon. The committee on books say "We find all the books and records well kept and correct, especially those of P. H. Mack, which are a credit to the county." The case of J. E. Dunlap, charged with assault to commit murder, was considered and ordered dismissed. It was recommended that the case of R. E. Barnes be also dismissed. The condition of the county hospital was found satisfactory. The damage to county records from fire was commented upon, and it is recommended that means be provided for their protection.

Mr. S. W. Bigland, who was at Independence some weeks ago, wrote a lengthy article upon Owens Valley, that has since been published in the San Francisco *Bulletin*. The article is the same in substance as many articles that have been published in the INYO INDEPENDENT during the past four years. Mr. Bigland has traveled much in our own and other States and has given particular attention to soil, climate and all connected therewith. It offords a good deal of satisfaction to the editor of this paper to have such a man confirm all we have said in favor of this country.

In the case of S. M. Gruber against Samuel McMullen—Thomas & Hill of Big Pine being interested—the original suit was dismissed by request of attorney for plaintiff. A new suit was begun, in which the wife of McMullen is joined with her husband as defendant. Last Monday a demurrer to the complaint was argued and overruled. Separate answers were filed by the defendants and the case will go to trial. This case will be costly for somebody; fourteen head of horses are held by attachment and are at Mair's livery stable at Independence. The defendants and their family are also at Independence. Expenses and costs are running up rapidly.

Two or three months ago Mr. N. Rhine sent a jar full of Owens Lake water to a friend in San Francisco who was afflicted with catarrh. The sufferer from this very nasty and annoying disease had consulted various physicians and tried many remedies, with but very slight benefit. Mr. Rhine advised him to use the lake water by snuffing up into his nose. The gentleman did as directed and has since written to Mr. Rhine that the effect was "magical." He says he is completely cured. He supplied some of the water to friends who were also sufferers from catarrh, and in every case the benefit was as great as with himself. Now orders are coming to Mr. Rhine from San Francisco to send the lake water by keg fulls; it appears to be a specific for catarrh.

Where water has been turned on the land along the Eastside Canal the soil proves to be very deep and exceedingly rich. The water makes it slack, like lime; and the ground is so warm that grain scattered upon it sprouts, roots and makes a growth of five or six inches in a few days. Cattle are attracted along the canal by the young grass; several have mired down in the deep soil and died. During the past ten days Mr. McIver has pulled two animals out where they had mired down and died near his camp. The canal is made in stretches of one mile each. The next stretch will reach where there will be a drop of about thirty feet, and where it is intended to have a water power for running machinery. It is probable that a town will grow up there. This point is about six miles south of Independence station.

### Found.

A tobacco pipe was found a few days ago some miles from Independence. The owner can have the sweet smelling article by calling at the office of the INYO INDEPENDENT giving proof of ownership and paying for this notice.

### After Timber Thieves.

The Government is making strong effort to prevent stealing of timber from public lands. The Reno *Gazette* says:

United States District Attorney Hayden has entered suits against various corporations and individuals of Eureka, aggregating about $13,000,000, for cutting timber off of unsurveyed Government land.

The suit against the Eureka Con. Company is for $3,542,330; Richmond, $6,262,570, Eureka & Palisade railroad, $750,000. Suits for smaller sums are entered against individuals and wood dealing firms.

### A Profitable Business.

Those who take an agency for a reliable enterprising house, learn their business and stick to it, "get on" in the world. People who have any idea of engaging in any canvassing business will do well to write George Stinson & Co., Portland, Maine—the great art and general publishers. They offer the most exceptional advantages to those who are sufficiently enterprising to be willing to make a push in order to better their condition. It costs nothing to try. Women make successful canvassers, as well as men. Full particulars will be sent to those who address the firm; their full address is given above.

### Wild Parsnip Poison

A sad case of poisoning by wild parsnip occurred near Bishop Creek last Monday. A boy aged about six years, the son of James H. Jackson, found the root and eat of it; the taste was pleasant and he gave some to two playmates, the children of Mr. William Hutchings. Soon after eating the children were taken violently ill. Mr. Hutchings was at work with his horses; a messenger hastened where he was and told him what had happened. He drove the horses at their utmost speed to the house; got the children into the wagon and then rushed the team to Bishop Creek. Doctor Middleton took charge of the children and used such remedies as saved their lives. The Jackson boy had apparently eaten more of the deadly root than the other children and died.

### A Pioneer Dead.

An old pioneer died at Mr. John Baxter's place last Tuesday. Mr. Baxter had given the veteran a comfortable home and a good living during many years. The old fellow seemed to enjoy life till its close; he was of a kind and sociable disposition and sauntered about the farm spending many pleasant days among the mares and colts. The exact age of Charley is not known; but he was in his prime when he crossed the plains with J. W. McMurry thirty years ago. Though his native state was Missouri, yet he never tasted tobacco or whiskey; it cannot be fairly claimed, however, that his long life was due to abstinence from the use of these pernicious luxuries, as it is an every day occurrence for other horses to die young that abstained from their use as carefully as old Charley did.

### Grand Jury.

The Grand Jury met on Tuesday. On the roll being called Frank Fitzgerald failed to answer, and was fined by the Court fifty dollars. The following names were drawn from the box:

| | |
|---|---|
| Anthony, Chas | Jones, James |
| Kispert, John | Stevens, A C |
| McDonald, A C | Riggs, J W |
| Cohn, A | Lucas, John |
| Olds, David | Levy, Henry |
| Moffit, J R | Malone, Henry |
| Lemken, John | Enos, W S |
| Ford, R W | Barlow, John |
| Cashbaugh, A A | McKenzie, J A |
| Smith, Ambrose | |

The remaining jurors in attendance, as follows, were then discharged:

| | |
|---|---|
| McCrosky, W G Jr. | Bourland, J C |
| Kehoe, Thos | Shaw, James |
| Roeper, J C Jr. | Newlon, S J |
| Bellows, Horace | |

David Olds was appointed and sworn as Foreman. Judge Hannah charged the Grand Jurors as to their powers and duty and the Jury retired. The usual Committees were appointed and the Jury adjourned till next day. The Committees proceeded to investigate the several matters committed to their charge. On Wednesday the Jury considered cases of violence that occurred at Bishop Creek recently. Subpoenas were issued for a number of witnesses and were telegraphed to Bishop Creek immediately; ordering the witnesses to attend at the Grand Jury room on Thursday.

George Turner has hauled a lot of ore from his mine at Deep Spring to Alvord. The ore will be shipped to San Francisco. Mr. Turner is going to run a tunnel to tap the ledge in his mine at much greater depth than he has yet reached.

### BORN.

GORMAN—At Camp Independence, December 10th, 1888, to Mr. and Mrs. J. S. Gorman, a daughter.

### DESERT LAND FINAL PROOF.

D. E. No. 250.

UNITED STATES LAND OFFICE, INDEPENDENCE, CAL., December 13, 1888.

Notice is hereby given that Augustus C. Stevens, of Lone Pine, Inyo county, California, has filed notice of intention to make proof on his desert land claim No. 250, for the N E ¼ of S E ¼, E ½ of N E ¼ of Sec 2, N W ¼, W ½ of N E ¼, W ½ of S E ¼, S W ¼ of Sec 1, Tp 14 S, R 35 E, M D M, before the Register and Receiver of this office at Independence, on Tuesday, the 29th day of January, 1889.

He names the following witnesses to prove the complete irrigation and reclamation of said land: John Lucas, James R. Moffett, Allen Kenyon and Joseph V. Skinner, all of Lone Pine, Inyo County, California.

JOHN W. P. LAIRD, Register.

## MISCELLANEOUS.

### CERTIFICATE OF CO-PARTNERSHIP.

STATE OF CALIFORNIA, County of Inyo.

We, the undersigned, do hereby certify that we are partners transacting business in the town of Big Pine, in the County of Inyo, under the firm name and style of Thomas & Hill, that the full names of all the members of such partnership are Robert Walker Thomas and Thomas Wheaton Hill, and that the places of our respective residences are set opposite our respective names hereto subscribed.

ROBERT WALKER THOMAS, Big Pine.
THOMAS WHEATON HILL, Big Pine.

In witness whereof we have hereunto set our hands this 27th day of November, 1888.

STATE OF CALIFORNIA, County of Inyo.

On this 27th day of November in the year one thousand eight hundred and eighty eight before me, P. H. Mack, County Clerk and ex officio Clerk of the Superior Court in and for the said County of Inyo, personally appeared Robert Walker Thomas and Thomas Wheaton Hill, known to me to be the same persons described in whose names are subscribed to and who executed the within instrument, and they acknowledged to me that they executed the same.

IN WITNESS WHEREOF, I have hereunto set my hand and affixed the seal of said Court, the day and year in this Certificate first above written.

[SEAL] P. H. MACK.
County Clerk and ex-officio Clerk of the Superior Court.

By A. K. EGGLEY, Deputy.

[ENDORSED.]

Filed November 28, 1888.

P. H. MACK, County Clerk.

### DESERT LAND FINAL PROOF.

D. E. No. 246.

UNITED STATES LAND OFFICE, INDEPENDENCE, CAL., Nov. 14, 1888.

Notice is hereby given that James R. Moffett, of Lone Pine, Inyo county, Cal., has filed notice of intention to make proof on his desert land claim No. 246, for the S W ¼ of S W ¼ Sec 2, S E ¼ of S E ¼ Sec 3, N E ¼ of N E ¼ Sec 10, N W ¼ of N W ¼ Sec 11, Tp 15 S, R 35 E, M D M., before the Register and Receiver of the office at Independence, Cal., on Monday, the 24th day of December, 1888.

He names the following witnesses to prove the complete irrigation and reclamation of said land: Albert W. Simonson, John J. Stewart, William D. Eakin and Reuben C. Spear, all of Lone Pine, Inyo county, California.

JOHN W. P. LAIRD, Register.

Young or old, married or single, sick or well, should read. Sent sealed, by DR. WHITTIER, St. Louis, Mo. [illegible] AND SEND WITH ORDER.

## SCIENTIFIC PROGRESS.

**The Most Recent Developments Reached by Investigators and Inventors.**

Natural gas is used in China for fuel.

The United States produced $250,000,000 of metalic products in 1887 and $282,000,000 of non-metallic mineral products.

Coal is worked in Kilkenny within ten to twenty miles of three railways, but there is no branch railway to the mines.

Peroxide of hydrogen in one-half or 3 per cent. solutions is said to be good in cases of diphtheria, ozæma and cancerous ulceration.

Lime water is said to be an admirable remedy in diphtheria, a teaspoonful being slowly taken each hour. It can be taken readily by children.

It is said that strips of red or blue flannel dipped in liquid arsenic and laid around the edges of carpets, will prove sure death to Buffalo moths.

A gigantic fossil discovered in Kansas is of an animal over 16 feet in length, the joints measuring 3 feet 8 inches long and the neck 4 to 5 feet.

Flammaroin says that the temperature of the planet Mars is at least as high as that upon the earth, and that its polar snows melt more rapidly than ours do.

The Japanese Admiralty has decided to coat the bottoms of all its ships with a material much like the ordinary laquer which we know on furniture and cabinet work.

The fastest armed cruiser in the world is said to be the German Grief, with 2,000 tons displacement and 5,400 indicated horse-power. She makes twenty-three knots per hour.

A large timber raft which lately started from Mayence for Utrecht, was 725 feet long and 175 feet broad and required 120 hands. It contained 4,000 pieces and was valued at about $100,000.

A manufacturer of carpet said some time ago that the perfection of textile machinery had so kept pace with the demand for adulteration of fabrics that the mills nowadays could spin almost any thing but sand.

The new "steam turbine" runs at only 18,000 revolutions per minute. It would be at least as much trouble to gear such an engine down to ordinary high-speed machinery as to gear our ordinary steam engine up to running the same machines.—*Philadelphia Press.*

## VALUABLE DISCOVERY.

**Precious Articles Found in the Burial Place of a Scythian King.**

An interesting account of a sepulchral discovery made lately in the Kuban, not far from the Krimskaya railway station, is given in the *Allegemeine Zeitung.* A large vaulted building was found, between sixty and seventy feet long. It was divided into three chambers and a corridor. The entrance to the innermost chamber was closed with flags. Within it were broken iron fragments of a wheel and reins and bones of a horse. In a corner was a great amphora of clay, beside it a silver drinking vessel, and near them about one hundred and fifty glass beads, some of evidently Egyptian origin. Some had the form of a medallion set in silver. Lying parallel with the side wall of the first chamber was the skeleton of a young woman with her head to the east. The experts consider she was a Queen. She had a thick necklet of gold. Near her was a thin triangular gold plate, nearly eight inches broad, with holes at the corner, showing that it was attached to the dress. Near this again there were sixteen pigeons cut from gold leaf and about fifty other articles similarly cut from gold leaf. Two gold earrings of filigree work of fine quality lay near the head of the skeleton, upon the arms of which were massive snake bracelets with horse-heads. A large gold ring was on a finger of the right hand. In the third chamber was found the skeleton of a man, together with various articles of great interest, the most valuable being a very exquisite quiver of silver, inlaid with gold and beautifully worked with a hundred copper arrows. The experts are satisfied that this was the burial place of a Scythian King. The value of the articles, which have been conveyed to the Imperial Museum at St. Petersburg, is fifty thousand roubles.

## SMALL INVESTMENT AND QUICK RETURNS.

**That $100,000 Capital Prize.**

"That was the first time I ever bucked at lottery," said young Edward M. Cassey to a *Picayune* representative on Wednesday last. He was waiting at the Louisiana State Lottery office on St. Charles street for a check for $5,000, which was being drawn up as payment of part of the second capital prize of $100,000, in Tuesday's drawing.

"Where do you reside, Mr. Casey?" queried the reporter.

"No. 22 Oliver street, Algiers. I am a ship carpenter; work for the Red River Line; am a New Orleans boy; was born in the Third district and am just 22 years old," said the young man in a confident tone peculiar to one who feels an interest in what he is talking of.

"Quite a nice little sum for $1. When did you buy the ticket and what number is it?" asked the *Picayune* man.

"I bought a one-twentieth part of ticket number 73,946, on Monday last, and it is the first lottery ticket I ever bought."

"If I may ask, sir, to what use do you intend putting your newly acquired fortune?"

"I intend to invest it in real estate and continue working at my trade," said Mr. Casey.

At this juncture in the conversation one of the gentlemen came from behind the counter and remarked to Mr. Casey:

"Here is a check for $5,000 on the New Orleans National Bank, Mr. Casey. Please let me have your ticket."

The lucky little piece of paper, numbered 73,946, was handed the clerk, and young Casey received his $5,000 check. He took it to the bank, drew a small sum on it, deposited the balance and walked out into the street a very happy young man.—*New Orleans Picayune*, Oct. 13.

## THE ARIZONA KICKER.

**Items Illustrating the Pleasures of Editorial Life in the Glorious West.**

A NEW DEPARTURE.—Next week we shall begin the publication of an agricultural department in the *Kicker*, thus making a year's subscription ten times as valuable as at present, without increasing the cost to subscribers. We have made arrangements with a tender-foot who struck the town without a cent to take charge of the new department. He is a sailor by trade, and we now have him out in the country learning the difference between a coyote and a Hubbard squash. He may make a few blunders on the go-off, as he sticks to it that potatoes ought to grow on trees, and that wheat grows wrong end to, but he is a hummer and will get there by and by. Remember, this department does not increase the subscription price at all. We are simply trying to publish a paper worth one hundred dollars per year for two dollars.

COME AGAIN.—If there is a more courteous gentlemen in all the great West than Colonel Dubiff we should like his address. We referred to the Colonel the other day as an unhung thief. It was only our way, but he took exceptions and called at the office on Tuesday and knocked us down. The blow was delivered in the most genteel manner, and was not accompanied with any verbal utterances to shock our sensibilities. Neither did the Colonel gouge our eyes or chew our ears after we were down. He was cool, calm and composed, and we freely admit that we got up with an increase of fifty per cent. in respect for him. Our nose was skinned, and we knocked an auction bill into "pi" as we fell, but we have no grudge to satisfy. The Colonel could do no less, and we are thankful he did no more. We shall be pleased to see him again.

NOT DISAPPOINTED.—The Common Council has awarded the city printing to the *Weekly Tom Cat*, as was expected, and that dish-rag of a sheet is giving us the grand crow. We are not disappointed. We put in the lowest bid, and we have the largest circulation, but the aldermen owed us one. The *Kicker* has recorded and exposed them as forgers, thieves and gamblers, and they do not think of us with kindness. And, too, they were under lasting obligations to the raw-boned, knock-kneed, cross-eyed, bow-backed old hyena who runs the opposition paper. Had he not been a member of the last grand jury every mother's son of 'em would have gone to prison. We have no tears to shed, gentlemen. You are on top just now, but wait a few weeks. We are working up your pedigrees, and Billy Pinkerton is coming this way in October!

LET HIM GO.—J. Y. Z. Hopkins, familiarly known to our citizens as "The Young Crowbar of the Rockies," called at the office yesterday and stopped his paper, because, as he explained, "it had no literary merit." We are glad to be rid of him. He hasn't got brain enough to appreciate a good thing when it is held under his nose. No literary merit! Great Scots, but how some people are built! We have been looking over the last three numbers and we find that they average three murders, two hangings, five robberies, two elopements and two shipwrecks each, and the testimonials of those who have been cured of consumption, gout and rheumatism are not slow reading by any means. While we are glad to see Mr. Hopkins go, we shall keep an eye on his future movements. If he has escaped from some Eastern idiot asylum our people ought to know it.

THANKS.—Our thanks are due Mrs. General Shiff for a peck of beautiful onions, sent in a day or two ago. Also to Mrs. Judge Hendricks for six tooth some sandwiches and a dozen pickles. Also, to Major Hayes for two pounds of butter and a slice of ham. It is generally known that we board ourselves, and our friends vie with each other in loading our table with delicacies. We pity the man without friends.

P. S.—Subscribers will please excuse the looks of the *Kicker* this week. The two pounds of butter mentioned above got mixed with our ink by accident, causing the latter to run too freely. We have added some pulverized clay to the lot, and expect the ink to stiffen up before our next issue.—*Detroit Free Press.*

### A Big Pennsylvanian.

The death of Winnie Johnson, the negro giantess, recalls another monster of corporosity who died in Milford, Pike County, Pa., on September 27, 1841. His name was Louis Cornelius and he was a noted hotel-keeper in his day. The following facts about him may be seen on the flyleaf of one of the musty record books in the County Clerk's office:

Louis Cornelius died September 27, 1841.
Dimensions are as follows:
Height, 6 feet.

| | Ft. | In. |
|---|---|---|
| Circumference below the waist | 8 | 2 |
| Circumference at the waist | 6 | 2½ |
| Circumference arm below elbow | 2 | 2 |
| Circumference arm at elbow | 1 | 9 |
| Circumference wrist | 1 | 3 |
| Circumference thigh | 4 | 2 |
| Circumference calf of leg | 2 | 7 |
| Circumference ankle | 1 | 7 |

Weight, 645½ pounds without clothing.

We do hereby certify that we were present and assisted in weighing Louis Cornelius after his death, and that the statement above is true and correct. Horace L. West, John Schimmel, M. Dimmick, E. B. Eldred, O. H. Mott.

—*Philadelphia Record.*

### Enough to Live On.

Visitor—You have been unfortunate, my friend.

Convict—Well, I dunno; I robbed a bank of twenty thousand dollars, and only got three years for it. That's more money than you can make in three years.—*Time.*

—Do not be discouraged at the duties that seem so great before you. They may seem great a little way off, but somehow they always diminish or vanish altogether as we come near them. Some one has said duties and difficulties are like the night-mare, as soon as you stir, they vanish. Learn to look on the bright side and you will be surprised at the number of things that will turn up to help you.—*Christian Inquirer.*

## ABOUT INDIA INK.

**The Secret of Its Manufacture Explained by a New York Stationer.**

"India ink hasn't any more connection with India than a good deal of the 'dairy' butter on the market has with a dairy," said a manufacturing stationer. "Somebody who didn't know what he was doing named the useful article India ink, but as a matter of fact it ought to be called Chinese ink. To be sure, before steamships and sailing vessels began to ply between China and this country it used to be shipped through India, but the Indians had nothing to do with its manufacture. Thousands of years ago the Chinese were expert in the manufacture of many articles of which Europeans knew nothing. Ink was one of these articles, and was first made of lac, which is a resinous substance deposited by a small insect and largely used in the manufacture of shellac. Afterward a peculiar black stone was found which could be dissolved in water, and later on lac and fir wood were burned and the resulting smoke gathered on some hard substance, scraped off and rolled into balls. It is one of the traditions of the Chinese that one Tien Tchen invented the process of making India ink some thousands of years before the Christian era. However that may be, a Mongolian named Litchao and his son Liting Kouei went into the ink-making business and turned out about as good ink as has ever been made.

Their successors were not as successful, and for a time the business rather languished. The process now employed by the Chinamen in the manufacture of their India ink is not radically different from that in use in ancient days. The old principle that burning resinous material will throw off thick smoke in large quantities is employed, only the smoke thus obtained is a little more scientifically handled. In the middle of a big porcelain dish, about two feet in diameter and three or four inches deep, they place a stand of about six inches diameter and the same height as the dish. Several small lamps rest upon the stand, and by means of arms fastened to the sides of the dish, small conical dishes are held just over the lamps. The dish is filled with water almost up to the tops of the lamps' wicks, and the lamps are lighted. The smoke condenses on the conical dishes hung over the lamps and is collected in the form of a dense, black powder. This powder is placed in a vase, and a warmed mixture of nine parts of fish glue and one of animal glue strained into it through a piece of silk held over the mouth of the vase. The contents of the vase, then being thoroughly stirred, are rolled into balls, wrapped in cloth and immersed in hot water.

"Kneading, another immersion and beating with a hammer follow, the paste is scented and in the form of long sticks is placed in various shaped molds. Wrapped in paper the sticks are placed in a dish filled with rice-straw ashes and in a day or two are thoroughly dried. Rubbing with clothes and brushes serves to clean and polish them and they are then ready for the market. The soft paste can of course be molded in any shape, but as a rule is made into short, slender sticks which are generally ornamented with more or less Volapuk inscriptions or Chinese designs. The peculiar qualities of the ink render it indispensable to sketch artists and draughtsmen and nothing has been found to take its place."—*N. Y. Mail and Express.*

—A precious thing is more precious to us if it has been won by work or economy.—*Ruskin.*

—Experience is not necessary in love making. It rather detracts from the interest.—*Texas Siftings.*

—It isn't always the man that makes the most graceful proposal that gets the girl.—*Merchant Traveler.*

—Very many things in this world can be made smoother if men will do their level best.—*N. O. Picayune.*

—He who comes up to his own idea on greatness must always have had a very low standard of it in his mind.—*Hazlitt.*

—Some people who attempt to regulate the morals of the people can not look at an approaching policeman without a shudder.—*Lincoln Journal.*

—Talk often spoils work. In thinking what to say men forget what to do, and in attending to what they are saying they neglect what they are doing.

—Never be grandiloquent when you want to drive home a searching truth. Don't whip with a switch that has leaves on, if you want it to tingle.—*Beecher.*

—To be happy the passions must be cheerful and gay, not gloomy and melancholy. A propensity to hope and joy is real riches; one to fear and sorrow, real poverty.

—If we would preserve our mental efficiency amid the changing pressure of circumstances we must by occasional recreation withdraw the mind from too continuous application.

—The business of life summons us away from useless grief, and calls us to the exercise of those virtues of which we are lamenting our deprivation. The greatest benefit which one friend can bestow upon another is to guard, and excite, and elevate his virtues.—*Dr. S. Johnson.*

### THE LATEST AND GREATEST DISCOVERY,

Dr. J. De Prati's HAMBURG FIGS—a crystallized fruit cathartic. A discovery of the greatest interest to the medical profession. A boon to every household. A most delicious laxative or purgative, prepared from fruits and vegetables. So perfectly harmless that they may be administered with entire safety to an infant. So efficacious to an adult that a single dose will prove their value, and so elegant a preparation that they need only be presented to the public to become a necessity in every household throughout the land. For liver complaints, habitual constipation, indigestion, dyspepsia and piles they are a specific. To travelers by sea and land they will be found invaluable. They are positively unfailing in their action, and this is the only medicine ever offered to the public that is so acceptable to the taste, and so pleasant that children will eat the Figs as eagerly as candy. Dose one Fig. For sale by every druggist throughout the world at 25 cents a box.

Countryman (to friend who is watching the stock ticker)—Don't git too near that air machine, Jake. Jake—Why not? Countryman—'Cause I hear people often gets bit by 'em.

Dujardin's Life Essense is rich in nerve-producing elements. It promotes secretion in glandular structures, and supplies nervous waste. Hundreds have been restored to health by its use, and it can only be appreciated by a trial. Price, $1.50 a bottle. All druggists.

—In some who have run up to men without education we may observe many great qualities darkened and eclipsed; their minds are crusted over, like diamonds in the rock.—*Felton.*

—To character and success, two things, contradictory as they may seem, must go together—humble dependence and manly independence; humble dependence on God, and manly reliance on self.—*Wordsworth.*

—"By their fruits ye shall know them." Christianity needs no other test. Skeptics may make light of the Bible and its doctrines, but they prefer employ Christians as trusted to servants.—*United Presbyterian.*

—The vacation school and evening school are to play an important part in the educational activity of the future, and they demand the attention of all friends of the schools and of the country.—*Journal of Education.*

—Never yet did there exist a full faith in the Divine Word which did not expand the intellect, while it purified the heart, which did not multiply the aims and objects of the understanding, while it fixed and simplified those of the desires and passions.—*Coleridge.*

—There are a great many people who seem to think that religion means not doing wrong. As if a knitting-machine that never knit any stockings would be considered good because it never misknit! What is a man good for who simply does not do some things?—*Beecher.*

—Many young men misuse schools wherein specialties are taught, by hastening through them into money-making, they will dwarf themselves and impart to our civilization a money-loving spirit which will be hurtful in the extreme. Moreover they will acquire and propagate utterly false and unworthy notions of education.—*Christian Advocate.*

—More than one young man has practically demonstrated the fact that a collegiate training is the very best possible preparation for success in mechanics and manufactures. And surely the farmer who knows about the soil and its capabilities is more likely to do well than the man who is ignorant of such things, and can only dig and sow as his fathers did before him. Other things being equal, the more knowledge a man has, the greater and more rapid will be his progress.—*Our Young People.*

### DON'T YOU KNOW

That you cannot afford to neglect that catarrh? Don't you know that it may lead to consumption, to insanity, to *death?* Don't you know that it can be easily cured? Don't you know that while the thousand and one nostrums you have tried have utterly failed that Dr. Sage's Catarrh Remedy is a certain cure? It has stood the test of years, and there are hundreds of thousands of grateful men and women in all parts of the country who can testify to its efficacy. All druggist.

### WHAT THEY ARE GOOD FOR.

BRANDRETH'S PILLS are the best medicine known.

*First*—They are purely vegetable, in fact a medicated food.

*Second*—The same dose always produces the same effect,—other purgatives require increased doses and finally cease acting.

*Third*—They purify the blood.

*Fourth*—They invigorate the digestion and clear se the stomach and bowels.

*Fifth*—They stimulate the liver and carry off vitiated bile and other depraved secretions.

The first two or three doses tell the story. The skin becomes clear; the eye bright; the mind active; digestion is restored; costiveness cured; the animal vigor is recruited and all decay arrested.

COUGHS AND HOARSENESS.—The irritation which induces coughing, immediately relieved by use of "*Brown's Bronchial Troches.*" Sold only in boxes.

Nurse—Can't I put baby in the crib, ma'am? Mother—No, doggie is in the crib. Wait till doggie has had his nap.

### CAN A MAN SWALLOW A CANNON-BALL?

Well, "that depends." He can if his throat is large enough and the cannon-ball not too large. The question really seems worthy of some consideration in view of the size of some of the pills that are prescribed for suffering humanity. Why not throw them "to the dogs," and take Dr. Pierce's Pleasant Purgative Pellets? Small, sugar-coated, purly vegetable, perfectly harmless, in glass, and always fresh.

The sidewalks in Salt Lake City are twenty feet wide so that a Mormon elder can go walking with his wife at his side.

Friend (who has been listening to a man kicking about his coal bill)—I wonder how you can stand all the abuse you get! Coal Dealer—Well, I don't mind it. In this business you get used to being hauled over the coals.

"I am weary of living," moaned poor Mrs. Black,
"For I'm fairly worn out with the ache in my back;
My nerves are a chain
Of weakness and pain,
And my poor head is aching as if it would crack."
"Now, don't be discouraged," cried good Mrs. White,
"It is never so dark but there's promise of light;
I can tell you, in brief,
What will give you relief—
Pierce's Favorite Prescription will soon set you right."

It is the only remedy for woman's peculiar weaknesses and ailments, sold by druggists, under a positive guarantee from the manufacturers, that it will give satisfaction in every case or money will be refunded. See guarantee on bottle wrapper. Large bottles (100 doses) $1. Six for $5.

The yellow dog contemplates with satisfaction the advance in the price of tin cans. It's an ill wind that blows nobody good.

### WHICH WAS IT? BACON OR SHAKESPEARE.

The authorship of the dramatic productions attributed to the last of the above named is agitating literary circles to the very centre, but affects the practical masses far less than the momentous question, how to regain or preserve health, that essential of bodily and mental activity, business success and the "pursuit of happiness." We can throw far more light on this latter subject than the most profound Shakespearian can on the question first propounded. If the system is depleted, the nerves shaky; if indigestion or constipation bothers one at times, or constantly; if the skin is yellow and tongue furred as in biliousness; if there are premonitory twinges of oncoming rheumatism or neuralgia; if the kidneys are inactive—use Hostetter's Stomach Bitters, the finest recuperant of an age prolific in beneficial and successful remedies. Remember, if malaria threatens or afflicts, that it neutralizes the poison and fortifies the system.

Old Miser—Will you dine with me to-night? Young Goodliver—No, thank you. I am hungry.

White Elephant of Siam, Lion of England, Dragon of China, Cross of Switzerland, Banner of Persia, Crescent of Egypt, Double Eagle of Russia, Star of Chili, The Circle of Japan, Harp of Erin.

To get these buy a box of the genuine Dr. C. McLANE'S CELEBRATED LIVER PILLS, price 25 cents, and mail us the outside wrapper with your address, plainly written, and 4 cents in stamps. We will then mail you the above list with an elegant package of oleographic and chromatic cards. Fleming Bros., Pittsburgh, Pa.

A new brand of baking powder is called "Old Hutch." It makes flour rise so quickly.

To those who have false teeth let us say that nothing will keep them so sweet and clean as fragrant SOZODONT, the queen of dentifrices. Large bottles 25 cents.

The street vender's business is not a trade; it is a calling.

Try Germea for Breakfast.

WELL DRILLS FOR EVERY PURPOSE. Sold on Trial! Investment small, profit large. Send 20c for mailing large illustrated Catalogue with full particulars. Manufactured by GOULDS & AUSTIN, 167 & 169 Lake St., CHICAGO, ILL.

# IN A QUIET WAY

We have been turning out more goods during September and October than any three houses in the same line of business on this Coast. We advertise but little, but we keep a class of goods that suits the people. Our success is not due to our own merit, but to the intelligence and sagacity of the people on this Coast. They comprehend at once that a firm who has no losses by bad debts to make up, and who buy goods in unbroken lots or carloads for quick cash, can offer advantages that are not in competition with any credit system. Besides this we carry under one roof almost everything needed to make life move pleasantly. Our sales during October averaged nearly two carloads per day and it taxes our great facilities to handle this immense trade promptly; but we have a trained force of the best help to be found anywhere, who have worked faithfully much beyond business hours to keep up our reputation for dispatch in filling orders. If this notice meets the eye of any one who is not already a patron, it is to be hoped they will favor us with at least a small order for trial. The Home Circle, giving market values at wholesale and retail of thousands of articles, will be sent to applicants for comparison of prices. But please remember that we mean to deal fairly with everyone—whether far or near, and the longer you trade with us the better will both parties under it, the advantages to be gained thereby. **Smith's Cash Store, 30 18 Front St. San Francisco, Cal.**

# ARM & HAMMER BRAND

*To Housekeepers and Farmers.*—It is important that the Soda or Saleratus you use should be White and Pure same as all similar substances used for food. To insure obtaining only the "Arm & Hammer" brand Soda or saleratus, buy it in "round or half pound" cartons which bear our name and trade-mark, as inferior goods are sometimes substituted for the "Arm & Hammer" brand when bought in bulk. Parties using Baking Powder should remember that its sole raising property consists of bicarbonate of soda. One teaspoonful of the "Arm & Hammer" brand of Soda or Saleratus mixed with sour milk equals four teaspoonfuls of the best Baking Powder, saving twenty times its cost, besides being much healthier, because it does not contain any injurious substances, such as alum, terra alba, etc., of which many Baking Powders are made. Dairymen and Farmers should use only the "Arm & Hammer" brand for cleaning and keeping Milk Pans Sweet and Clean.

CAUTION. See that every pound package of "Arm and Hammer Brand" contains full 16 ounces net, and the ½ pound packages full 12 ounces net. Soda or Saleratus same as specified on each package.

OUR TRADE MARK. CHURCH & CO'S SODA. ON EVERY PACKAGE.

Packed in Card Board Boxes. Always keeps Soft.

**SODA OR SALERATUS**

THE ONLY DYES

Brilliant Durable Economical

Are Diamond Dyes. They excel all others in Strength, Purity and Fastness. None others are just as good. Beware of imitations—they are made of cheap and inferior materials and give poor, weak, crocky colors.

36 colors; 10 cents each.

Send postal for Dye Book, Sample Card, directions for coloring Photos., making the finest Ink or Bluing (10 cts. a quart), etc. Sold by Druggists or by WELLS, RICHARDSON & CO., Burlington, Vt.

For Gilding or Bronzing Fancy Articles, USE DIAMOND PAINTS. Gold, Silver, Bronze, Copper. Only 10 Cents.

Paine's CELERY COMPOUND

| CURES | PROOFS |
|---|---|
| Neuralgia | "Paine's Celery Compound cured my nervous sick headaches." Mrs. L. A. BRENTNER, San Jacinto, Cal. |
| Nervous Prostration | "After using six bottles of Paine's Celery Compound, I am cured of rheumatism." SAMUEL HUTCHINSON, South Cornish, N. H. |
| Rheumatism | |
| Kidney Diseases | "It has done me more good for kidney disease than any other medicine." GEO. ABBOTT, Sioux City, Iowa. |

## MY LOST BABY.

What can have become of my darling?
Why, only a brief while ago,
She lay in the cradle beside me;
But now she's gone. Where, do you know?

"In what way distinguish my babe?"
Her hair has a pale golden hue;
In each pink cheek there is a dimple;
Her bright eyes are, as sapphires, blue.

A deal of the time, her plump fingers,
Or, if not her fingers, her toes
Are found in her mouth—like a rosebud
Just oped—'neath the daintiest nose.

She laughs and she cries and she frolics
As other babies do, I opine;
Her cooing, however, is peculiar
To this precious baby of mine.

I fear I did not understand you;
Please slowly repeat what you said.
"My—baby—lost—to—me—forever?"
What mean you? That—that she is dead?

"'Tis years since your child was a baby;
She now to a woman has grown"
You say, and I know you speak truly.
Ah, me! how those same years have flown.

More often as babe than as woman
I think of my child and, in Heaven,
I pray that, an innocent baby,
She back to my arms may be given.

—*Florence Tremont, in Brooklyn Eagle.*

## THAT PRINCE ALBERT.

### An Old Darky's Amusing Conduct During an Emergency

Mr. Waldo Archer, the portrait painter, lived, about three years ago, in one of those pretty studio buildings on Thirty-seventh street, in New York City. If you have ever been through the street you must remember the buildings—Philadelphia pressed brick, each story set back further than the one below, and with a sloping roof of ground glass rising back to the next story.

Mr. Archer was not as well known then as he is now. He had not as yet painted that portrait of Leonard P. Jenkins, vice-president of the Q., P. & W. railroad, which made such a stir at the spring exhibition at the academy in 1886. But he had already attained reasonable success, and had a pretty wife who was a painter, too—not of portraits, but of china—that dainty sort you have seen at the great china stores, wild roses with the morning dew on them and blackberry vines in their autumn colors. You felt almost certain you could see them stir a little in some passing breeze, as you looked at them.

Mrs. Archer had herself done the housework in the little flat for some time—she did not find it much of a burden. And now, their only servant was an old colored man who had brought them a letter from some dear friends of theirs in the South. He had come to New York to look up a child he had lost after the war, but had only found that the child was dead. The Archers did not know what to do with the old man, at first. He used to come in in the afternoon to see if they had found him a place.

Mr. Archer would be painting away at his easel on the blue coat perhaps of a General, or the ball-dress of a lady of fashion, and his wife would be sitting in her low, rattan chair reading aloud to him from Robert Browning or Dr. Holmes, or some other of their favorite writers, when there would come a knock at the door, and in would walk Rev. Alexander Maxwell St. Clair, bowing low and swinging back at arm's length his high, whitebeaver hat.

He was a tall, gaunt old man, solemn in appearance until he began to speak, when his face lighted up finely.

Mrs. Archer always laid her book down at once, and asked him to be seated, but he would only bow and smile, and remain standing, and say, bowing his head frequently while he spoke:

"Well, sir, any news for me to-day, sir?"

He always said "Sir," but he evidently asked the question of both.

There never was any news. Mr. Archer "loaned" him a little money now and then, "till he could find a place," and finally they took him themselves—in self-defense, Mrs. Archer said—and he soon became an established member of the family.

He could cook, and wash and iron, and sweep, and scrub—not only could, but did. He "tended" the door with much state and solemnity, made all the purchases at the grocer's and butcher's, and, in fact, rendered life quite another thing for Mrs. Archer.

She said that formerly, when she read to her husband from Whittier or Lowell, she was always seeing visions of boiling potatoes and baking bread floating between the lines. Now she turned all such visions over to Alexander.

One day a handsome carriage, with a faint red monogram on the panel, stopped before Mr. Archer's building, and in a few moments a gentleman was ushered in by Alexander—Mr. Winthrop.

Mr. Archer knew the name. He had seen it in the papers often. And he knew where Mr. Winthrop lived, in a great, double, brown-stone house with glittering plate-glass windows, on Fifth avenue—a corner house with a square oriel window projecting diagonally from the corner on the second floor.

Mr. Winthrop had seen some of Mr. Archer's portraits at the Academy Exhibition, and recently had been especially pleased with one he saw at a friend's house on Fifty-seventh street. He wanted to have Mr. Archer to paint his portrait, and had come to arrange for the sitting.

They agreed on Wednesday of the following week for the time, and at two o'clock on that day Mr. Winthrop's carriage brought him again. He had Alexander go down to the carriage and bring up a package containing a Prince Albert coat he was to wear during the sittings. So he put it on, and after much discussion and many experiments as to his position, he was finally seated and Mr. Archer was at work.

Now the coat was a handsome one. Alexander had seen handsome clothes in his day, at the South, and he noticed this one as soon as it appeared on the scene. The material was a rich diagonal, and it was lined and faced with expensive silk, and fitted like a glove. When Mr. Winthrop went away that day he left the coat.

"I will leave it," he said. "I should be sure to forget to bring it every time."

Alexander wrapped the coat up and put it away on a closet-shelf. After that Mr. Winthrop came nearly every Wednesday, for a good many weeks, and then the portrait was finished at last, and was sent away. It made a fine picture. Mr. Winthrop was a tall, well-built man, with a strong, vigorous face a little flushed, and a bushy head of hair just beginning to turn gray, and Mr. Archer had caught his best expression perfectly. Every one who saw it was delighted.

Mr. Winthrop and Mr. Archer had become very good friends, and Mrs. Archer had fallen into the way of sitting in the studio while the work was going on, with her painting or sewing. But Mr. Winthrop was a busy man, and after the picture was done, it was a long time—nearly a year—before he came again.

One day the carriage brought him once more. The Archers were both at home. Mr. Archer was at work just then on a portrait of a pretty child with blue eyes and sunny hair, dressed in black velvet. They had a very pleasant half-hour together, and then Mr. Winthrop rose to go.

"Oh, by the way," he said, as he stood by the door, "it just occurs to me that I have a coat here. I forgot it when I went away. That was a favorite coat of mine. If you can lay your hand on it now, without trouble, I'll take it."

"Oh, surely," said Mr. Archer.

"I'll let Alexander get it," said Mrs. Archer.

"Coat?" said Alexander, when he was summoned in. "Coat?"—I wish I could give you his voice, as well as his words—the strong melancholy in its tones, and a faint, illusive negro accent—too faint and too illusive to be represented at all in type.

"Don't you remember the Prince Albert coat I had here, Alexander?" asked Mr. Winthrop.

"Seems 's if I did, now," said Alexander, bowing his head, a little on one side, at short intervals, and looking steadily at his own boots. "Seems 's if I recalls that coat, an' yet"—

"Oh yes, Alexander," said Mr. Archer "of course you remember that coat. Go and look for it. It must be here, somewhere."

Alexander shambled about the studio, looking not only in the closets, but in all sorts of impossible places, under chairs and behind boxes and pictures. Then he went shuffling through the other rooms, noisily opening drawers, inspecting shelves, looking into trunks.

Mr. Winthrop resumed his seat, meanwhile, and the talk ran on again. But Mrs. Archer exchanged looks with her husband.

Alexander returned after a short time.

"I can't seem to fin' no coat about," he said, bowing and bowing, and looking at the floor, and the pictures, and everywhere but at Mr. Archer. "Somefin' mus' have happened to that coat."

"I will look for it myself, Alexander," said Mrs. Archer, in a tone of displeasure, and so she departed and looked through the drawers and trunks and closets, but all with no better results.

"Well, Mr. Winthrop," she said, as she came back, "there certainly is something mysterious about the disappearance of that coat. I can not find it. But we will have a thorough search for it, and will send it to you."

So Mr. Winthrop went rolling away in his carriage.

"Alexander," said Mrs. Archer, when he was gone, "don't you remember that coat Mr. Winthrop left here?"

"Coat?" said Alexander, bending his head on one side and beginning to bow, "why, yes, I do rememb' that coat perf'ly."

"And did you really look for it just now as hard as you knew how?"

"Well," said Alexander, as if weighing his words very carefully, "well, now, not just as hard as I has some things, well, no."

"And did you really expect to find it where you looked?"

"Well, now," said the old man, "jus' where I look, why, no I can't say I did expec' to see it jus' there."

"Alexander," said Mrs. Archer, in a severe tone, "I believe you never told me a falsehood. Do you know where that coat is?"

"Well, now," he said, "I suppose I do know where that coat is, well, yes."

"Why, I am shocked, Alexander," said Mrs. Archer. "Where is it? Who has it. Have you sold it?"

"No."

"Given it away?"

"No."

"O Alexander have you been wearing that beautiful coat?"

"Well, now, Mis' Archer," said Alexander, looking her in the face now, and holding up his two black hands with their white palms toward her, "if you will pause a moment, I wish to say a few words to save my character from sacrilege. I have not wore that coat."

"Who did?"

"Well, Mis' Archer, Mr. Archer have that very coat on hi'self, this very minute!"

Alexander's feelings here overcame him, and he turned and fled to the kitchen. Mr. Archer tore off his coat, and looked at the tailor's name.

"I never had him make me a coat," he said. "Why, this does look like that coat, to be sure. But it looks like my coat, too, only a great deal better."

"O Waldo!" was all Mrs. Archer could say, as she sank into her low wicker chair.

"Don't you remember," he said, half laughing and half in consternation, "that I've said several times that I must be growing stout, my coat was getting so tight?"

Mrs. Archer nodded and laughed again. From the kitchen came a faint snicker. It was the first time they had ever known Alexander to give way to levity.

"I shall sit right down and write to Mr. Winthrop," said Mr. Archer, finally. "I can't send him the coat now, but I'll paint him a picture to console him for his loss."

And he did.—*Youth's Companion.*

## SYMPATHETIC PEOPLE.

### A Curious Habit of Mind Which Arises from Various Causes.

Nothing is harder to hit than the happy medium. Some people have such an intense and sleepless sense of their own rights that they are always in hot water, always eager in redressing some real or fancied wrong. Others, again, are morbidly sympathetic and weakly generous. They have an intuitive perception of the feelings of other people, and an instinctive desire to gratify those feelings. They are continually making victims of themselves. They can not say No. If their own rights and the rights of another come in conflict, they yield their own rights at once. No matter who treads on their toes, and no matter how hard the heel, they are always ready to say with Mr. Toots: "It's of no consequence." This curious habit of mind arises, sometimes, from the will having been crushed by unskillful severity in childhood; sometimes from a defective organization; sometimes from an extreme abhorrence of selfishness; sometimes from incorrect conceptions of religious duty.

These soft and sympathetic souls probably do more harm in the world than any other class of virtuous people. The most pugnacious stick-to-rights, though he certainly does give the public a great deal of trouble, is, upon the whole, a useful person. He makes other people very careful to observe the rights of their fellows. In fact, our soft friends themselves could not get on at all but for the aid of those who will not be imposed upon. Yet it is Stick-to-Rights who is called a hard man, an unfeeling brute, an incarnation of selfishness; while his soft neighbor is supposed to be the most "amiable" of men.

"If you make a sheep of yourself," said old Dr. Franklin, "the wolves will devour you." No man has a right to give such encouragement to wolves. Wolves are the common enemy. To overcome such wolves a mam must "show his teeth," and, if need be, *use* his teeth. Then the wolves will not be apt to molest him, and the opinion will spread among beasts of prey that it is better to let alone a class of creatures who can be lambs to one another, but bull-dogs to those who attack them.

Old Hickory's rule is a safe one to follow: Ask nothing but what is right; submit to nothing that is wrong.—*N. Y. Ledger.*

## PAINTING FLOORS.

### A Fashion Which Deserves to Become Popular Everywhere.

Now that the fashion is becoming more prevalent of using carpets which do not completely cover the area of the floor, and thus escape distortion by being so cut as to coincide with every angle, recess or curve of the walls, floor painting should certainly be more generally adopted. Painted borders are all well enough, but the whole area of the floor may advantageously be laid out in color. This painting necessarily involves priming, which of itself, adapted to floors, is hygienic, as having the effect of closing the pores in which dust lodges, the dust, with its darkening effect, never failing to find lodgment—unless, indeed, the board be of costly hardwood, which is the exception, not the rule. It may be said that a floor painted all over will not be seen; but, without replying that a painted border where the whole area is not colored is a deception, we may remark that the entire treatment of a floor or cover affords a security against unsightliness should any portion of the central carpet be accidently raised, and in the event of its removal for the purpose of cleaning, the painted floor suffices, more especially if enriched with a few rugs or tinted or patterned mats. In the hot summer months a floor artistically painted will be found preferable to carpet, as aiding in the movement of air, not harboring dust, and proving, on the whole, cooler. Paint may be so compounded and laid on the floors as to suffer little injury even when exposed in a long course of time. Should the colors become dull, a slight varnishing will suffice to renew much of their pristine freshness. There are many rooms in a house which would be all the better for not being fully carpeted. Such especially are the bed-rooms.—*Boston Budget.*

—If you would not have affliction visit you twice, listen at once to what it teaches.—*A. L. Knox.*

## THE JONES FAMILY.

### How Good Old Mrs. Jones Entertained Her Patient Lord.

"Maria," said Mr. Jones the other evening, "I believe I'm losing my eyesight. I can't begin to see as well as I once did."

"It's too bad, Jeptha," said Mrs. Jones sympathetically. "Now *I* can see quite as well as I ever did. I can read the finest print by gaslight without any trouble."

"Second sight, eh?" asked Jones in a sarcastic voice.

"Nothing of the kind, Mr. Jones; if I needed glasses I should wear them," answered Mrs. Jones.

"Well, I wish you would lend me some of your good eyesight. Here's the evening paper. I haven't read a word of it. Just skim it over and give me the news."

Mrs. Jones fidgeted a little. Then she took the paper and, holding it off at arm's length, began to glance it over.

"Why don't you set it up in the next block?" asked Jones.

"I always hold a paper at a distance," said Mrs. Jones.

"Well, why don't you read something?"

"I will. Why—what is this? Miss Sally Smith, daughter of our esteemed townsman—oh, goodness gracious, Mr. Jones, ain't that awful! Poor Sally! And to think we haven't heard of it—murdered in her home and in the presence of her family. Jeptha, I feel faint."

"Sally Smith murdered!" exclaimed Jones, "that red-headed Smith girl that could snatch the roof off a woodshed! Not much! I don't believe a word of it!"

"Yes, she is! Poor Sally—in the presents—presents of her family—numerous and costly—why—why——"

"Let me see that paper," snarled Jones, as he made a dive at it and upset the cat.

"Oh, I made a mistake—um—um. She was married to Mr. Saltus, her father's clerk, and it's the presents of the family. Shall I read something else?"

"Do," said Jones; "I like your style. It's exciting. Next!"

"I'll try politics next. T-h-e R-e-j-e-c-t-e-d T-u-r-k-e-y!"

"There," snarled Jones again, "you needn't spring any Thanksgiving story on me—give me the facts."

"It ain't turkey—it's treaty I—"

"Maria," interrupted Mr. Jones, "I like to hear you elocute, but a little of it goes a long way. You let your imagination run away with the facts. Go down to-morrow and get measured for a pair of specs—until then I'll guess what's in the papers."

And Mr. Jones stamped viciously on a black bead that had tumbled off his wife's dress, under the impression that he was killing a cricket on the hearth.—*Detroit Free Press.*

## PARLOR ETIQUETTE.

### How You Can Make Yourself Agreeable to Your Acquaintances.

Do not manifest impatience or interrupt another when speaking. If you think the monologue has continued long enough, lean comfortably back in your chair, assume an expression of intense interest, close your eyes and snore, not harshly or impatiently, so as to give offense, but with the long-drawn, musical cadence of a contented man, who is glad to sleep and has nothing for which to remain awake.

Do not introduce professional topics in general conversation. It is much better to talk about yourself all the time. Then people will have no difficulty in understanding you. A sweet white haired old lady, who is devoted to foreign missions, will hardly rise to the level of your enthusiasm when you tell her how they scored six times before they got the word, and then they swaggled off with Scraggy Jim at the pole and Wild Sal running under the wire, and Sleepy Jane, that you backed to win three straight heats, broke four times on the first quarter and got shut clean out at the distance pole. You will interest her more deeply if you tell her how all the girls are dead set after you, but you are too kind-heartedly sharp for 'em. This kind of talk always interests old married people.

Do not continually interject "you know" and "you see" into your conversation. Say rather, "Savvy, John?" "Ketch onto that, cull?" or "D'ye tumble, Shorty?" Then the people will know that you have been to college away from home. Never listen to a remark the first time it is made. This will give you an opportunity of saying "Beg paw'dn" at intervals. Then everybody will know that you have been abroad—in your mind.

Talk in very loud tones, of course. Speak up so that the company will hear you. In the parlor or at the table always talk with the man farthest away from you. Then people will say: "Who is that eloquent young auctioneer?"

The oppressive little lapses in conversation can be most beautifully filled in by whistling. If you can drum an accompaniment on the window-pane with your finger the effect will be charming. People will be greatly pleased with you—when you go away. But, of course, they will be too polite to say so.—*Burdette, in Brooklyn Eagle.*

### A Truthful Lawyer.

A.—You say your brother is a lawyer and that he never told a lie.

B.—I said that his mouth never uttered a lie.

A.—Humph—Perhaps your brother is dumb?

B.—No, but his mouth never uttered a lie because he talks through his nose. He attends principally to winding up estates.—*Texas Siftings.*

## AN ENGLISH HOTEL.

### How London Caravansaries Are Run on the American Plan.

If you have never stopped at an English hotel conducted on the American plan, you should do so at the first opportunity, because you will enjoy it immensely. They have American pensions (pronounced pon-say-ongs) in Paris, Berlin and Vienna, which lure many of my countrymen and women to destruction, and of which I hope to be able to tell you something later, but with all their faults I think they have some claims upon our consideration as tourists which lay over the English hotel conducted on the American plan.

You are driven up to this hotel in a carriage, and you expect to alight at the ladies' entrance, as you would under similar circumstances at the Palmer or Grand Pacific. But you don't do any thing of the kind.

The driver descends, and, approaching a large iron gate, pulls a bell-knob, which pull is responded to by the hammer of a gong such as pilots signal to the engineer with on American steamboats. The driver then resumes his seat.

In the course of the morning, or afternoon, or night, as the case may be, the gate is opened, and the warty-faced man with a stub nose approaches the carriage. He is in no hurry whatever.

"Do you wish to hingage apartments?"

"We do."

"'Ave you brought your baggage?"

"We 'ave not."

"Ware is it?"

"At the Euston station."

"As hit been hexamined?"

"We presume so."

"'Ave ye the checks?"

"We 'ave."

The warty face man grunts, passes through the gateway, locks the gate after him, and returns in the course of an hour. This time he swings the gate wide open and invites the driver to come in. We are now in the open court yard. We alight. We enter an office that looks like a railroad baggage room. The "lift" isn't running, but it will be in a few minutes. We wait half an hour. We climb the stairs. We are taken to a handsome suite of rooms. We are tired and cross.

Enter another white aproned man. Would like our names. Gets them. Bows and retires. Enter another white-aproned man with an nose like a lobster claw. Hands us bill of fare. We order breakfast.

"When can we have it?"

"Himmejiately."

"All right."

"What, sir?"

"I say, all right."

"Yes, sir, 'twill be all right, sir."

It comes in the course of the day. We hint to the waiter that we understood that this hotel was conducted on the American plan.

"So it is," he replies, and he says it so firmly and conclusively that it would be useless to contradict him.

We rest, take a nap, read the papers and kill time as best we can until the afternoon is well advanced. We ring for waiter. Waiter comes. This time his nose has the color of a blue-bottle fly.

"How about dinner?"

"Tabledote or served?"

"Tabledote, of course."

"Tabledote over, sir."

"Why were we not called?"

"Got no orders, sir."

"Well, then, let us have it served."

We learn later that guests are not invited to table d'hote unless they leave orders to that effect and it is served only for one hour. Our dinner must be cooked completely and the day is almost spent before it arrives.

"Papa," suggested Ned, "let us go out and find an American hotel that is conducted on the English plan."

This seemed absurd at first, but it is just exactly what I proceeded to do after dinner. I don't find an American hotel exactly, but I find one that isn't conducted upon any particular plan, and we will have our belongings moved over there in the morning.—*London Letter in Chicago Times.*

### Too Good for This World.

Applicant—I would like a position, sir, in your store.

Merchant—Have you any references, young man?

Applicant—No, sir, but I think I would suit you. I have been carefully raised, and my habits are unexceptionable. I have no vices. I don't know one card from another. I don't know what tea, coffee, tobacco or liquor tastes like. Never go out at night. Never saw the inside of a billiard-saloon or ten-pin alley.

Merchant (dubiously)—I'll take you, young man, but I am afraid I shall not be able to keep you long. You will have a situation as a shining angel before many years—you're too good for such a world as this.—*Chicago Tribune*

### What She Wanted.

"Pa, do you know that this is my eighteenth birthday?"

"Yes, my dear."

"Pa, I want you to do me a great favor on my birthday," and the beautiful girl buried her glowing face on the paternal bosom.

"And what is the favor my little girl wants?"

"Pa, you have influence with city council, haven't you?"

"Well, yes, my dear."

"Then have them move that gaslamp away from right in front of our gate."

Thus it was that the fond father discovered that a daughter isn't a little girl always. She had a beau.—*Texas Siftings.*

## INFLUENCE OF FORESTS.

### Rivers Running Through Treeless Regions Said to be Destitute of Trees.

Although scientists are not in perfect accord as to the influence that forests exert upon climatic conditions, nevertheless there is sufficient agreement among them for us to know that they do exert powerful and beneficent influences in many directions. The forest acts like a great sieve, and retains the fine particles of the soil, which the influence of the air and sun, the frost and rain, and the action of the numberless roots have decomposed. In all forest countries the changes of temperature are not so severely felt as in a treeless country, or on the open plains, and it is a popular saying that the forest streams are cool in summer and warm in winter. The forests not only regulate the flow of water, but they purify it. Where the water of a stream has been polluted, as by sheep-washing, for instance, after having passed for a few miles through a shady and dense forest, the water appears as clear as it was previously.

Again, it is thoroughly well established that the presence of large tracts of timber has a well-defined influence upon the rainfall of the districts in which they are situated. Certainly parts of France which have been denuded of their forests are subjected to disastrous floods and overflows, which occur almost annually and cause great destruction and distress, although such visitations were entirely unknown in the previous century while the forests were as yet intact. In our own country, as well, the same effects have been observed, and the destruction of forests has proceeded so rapidly in Prussia of late years that the Government has passed a law protecting timber. It was found that the climate in many districts was changing, and the rivers and lakes were becoming shallow in consequence of the wholesale cutting away of wood. This feature of sylvan influence is often adverted upon, but there is another manner in which the presence of trees exerts an influence that is not so generally known.

Close observers have ascertained that rivers running through treeless tracts of country are nearly, if not quite, destitute of fish, and that fish will desert a stream from which the timber has been removed, although they previously swarmed therein. In the propagation of fish it is not enough to place the fry in the water, they must be provided with food, and the best means to do this is to preserve the border trees, and insure a steady supply of water and food by preserving the forests whence the supply of food is derived. If new forests are cultivated on the barren ranges, many a stream, now nearly empty during dry seasons, will be refilled with fish and food for the many. To see the conservation and cultivation of forests, beginning to receive even a modicum of the attention it deserves is a matter of rejoicing.—*Timberman.*

## BEFORE THE CAMERA.

### A Photographer Chats About the Difficulties of His Business.

The most difficult part of our business is the posing. People are fussy in almost every case, and we have to draw largely on our patience to satisfy their whims. Of course babies are the most difficult to place before the camera properly, and we yet have never met an instance where the parents thought justice done to the little future President or President's wife. After the babies comes the stage people. You would think an actress an easy subject for a sitting, but she is in reality the most difficult to manage. For instance, the moment she takes her position as a model she falls into one of her theatrical attitudes, and the effect in the finished picture is stiff and stagey in the extreme. To avoid this result, we often spend several hours before a natural pose is effected which will be graceful in depiction. Actresses, with the exception of the ballet and the lighter drama, desire natural and simple pictures, and take much trouble to obtain that effect. The society girl, on the other hand, is anxious to "look like an actress," and for that reason we keep a lot of stage flummery, as we call it, on hand. When the "regulars" come in they disappear in the dressing-room, and change there handsome costumes for the fluffy, light materials we have on hand, and then, when the dashing belles emerge in the unfinished waists and fleecy draperies, and cheap ornaments, which we also keep on hand, the other side of the picture is presented. I can tell one of these from the after effect when produced cleverly with the assistance of sun, camera and paper. Now that the statuary mode has gone out of fashion, and the decollette style is fast being abolished by the Parisian dictates, we have more of the street costume pictures, and less trouble in posing. We nearly always invite celebrities who come along to sit for us, in a complimentary way, of course, and many accept. Fanny Davenport was formerly the most gracious in obliging us in that line, and she is a superb subject. Lately, however, her time is so limited that she seldom poses for a photograph. Gilmore is the most difficult celebrity to induce to have his picture taken, and I believe the only time he ever would submit to have one made was in this city. About the ease of sitting men correctly? They are the least difficult to pose, as they usually drop in in their business suits, take the first position they fall into, and there's an end of it. Yes, it is easier to pose them; but, of course, women make the most beautiful pictures, and that is dear to an artist's heart and ambition.—*St. Louis Globe-Democrat.*

## ARTIFICIAL FLOWERS.

### An Important Industry Originated by Pious Italian Nuns.

Artificial flowers were first invented by pious nuns. In the Italian convents the altars and shrines of saints were, up to the end of the eighteenth century, decorated with artificial flowers, laboriously put together of paper parchment, and other stiff materials. Since then the "Italian flowers," which are made in Venetian factories of the imperfect cocoons of silkworks, have become famous for their daintiness, which makes them particularly suitable for toilet decorations. Besides these silk flowers, other artificial flowers are made in Venice, whence nearly all Italy is supplied, and whence whole wagon-loads are exported to other countries. I have been over one of the Venetian flower factories, for no sooner has the visitor to Venice taken his early cup of chocolate at Florian's near the Marcus place, when the cicerone appears, offering to show him the "famous" factory of the "famous Italian flowers." This factory is situated in one of the gray old houses of the Frezzaria, and several hundred girls are occupied in it. In the warehouse the most wonderful reproductions of natural flowers are exhibited in glass cases, and it seems in many cases as if not only the richest and most brilliant colors, but the very scent of the flowers, had been stolen from nature, for some of the artificial flowers are steeped in the perfume distilled from the flower which it represent. Any one wishing to take home some souvenir of Venice can have his choice of beautiful and often fantastic objects at the factory.

In the upper stories of the house the girls sit at their work, constructing, with clever hands, the most beautiful works of art, for all the most expensive are nearly exclusively made by hand, and their value depends solely on the manual dexterity and taste of the poorly-clad and most delicate-looking girls, sitting at long tables, and inhaling the unhealthy dust of the dyed materials. No machinery could replace the dexterity and taste. Last century a Swiss invented a machine for cutting out the leaves and petals, but it can only be used for the smallest kinds, such as are wanted for hyacinths, lilies of the valley and other small flowers. In large petals the irregularities of manual work are preferred to the stiff and correct forms produced by machinery. The material of which the petals are made is woven in special factories; the scissors and other tools used by the girls, as well as the presses in which the veins are traced on the leaves, are of a shape specially adapted to the work. Each part of a flower is made by specialists. In one room, for instance, only stalks of flowers and leaves are made; in another fruits and berries of all kinds are cast, if they are of wax, or blown, if of glass. The cleverest workers, are employed in making blossoms of the single petals, and bouquets, wreaths and garlands of the single blossoms. It is very interesting to watch this process and see how, first, the center of a flower is constructed, then the petals put round, next the green leaves, and so forth, till a flower or branch is complete.—*Gartenlaube.*

## UNCLE SAM'S HORSES.

### How the Cavalry and Artillery Services are Provided with Remounts.

The army regulations provide for the purchase of horses in a certain routine fashion. As a matter of fact only geldings are accepted. They must be sound and in good condition; that is, with no traces of constitutional defects; the height must be from fifteen to sixteen hands; they must not be less than five nor more than nine years old. The specifications conclude with the ambiguous statement that the horses must also be in all respects fitted for the cavalry service. The latter, being solely a matter of individual opinion, is the source of many quarrels and disputes between contractors and inspectors.

More care is exercised in the selection of a cavalry horse intended for the artillery service. He must possess a bright, intelligent eye, a good head, shapely shoulders and breast, and a hard hoof, free from splints and unsightly marks. His weight must be between nine hundred and one thousand one hundred pounds. The color of the horse has much to do with his being purchased. The colors which are preferred are roan, black, bay and chestnut. Next to these come iron-gray and sorrel. Horses of "off" colors, such as calicoes, buckskins, etc., are taken only when it is necessary to do so to complete a contract. White horses are rarely accepted for the ranks, although they are sometimes bought and used in mounting buglers or a band. The modus operandi of purchasing horses is, as a rule, as follows:

At stated periods, say the end of each quarter, each company commander of a cavalry trip makes out a requisition on the assistant quartermaster of his department for the number of horses which he may need. When the requisitions are all in the assistant quartermaster advertises for bids for the horses wanted, the animals to be delivered at a certain place for inspection on a certain day. Each bid sent in must be in triplicate and accompanied by a guarantee, indorsed by two responsible parties, that in case the bid is accepted th contract will be fulfilled to the let At the time and place agreed up contractor must not only have ber of animals actually requ Government, but also a s ber to select from in ca and he should fall sh terms of the contract *Gazette.*

## VALUE OF MESMERISM.

### THE THEREPEUSIS OF HYPNOTISM AS A MEDICAL STUDY.

**An Anæsthetic as Perfect as Ether. Story of the Seven Headed Cow—Rebellious Responsives—Can Crime Be Committed by the Aid of Mesmerism?**

It is conceivable that mesmerism might injure an invalid. If he have heart disease, for instance, an exciting or violent episode, a rapture of joy or a convulsion of great grief or fear, it might prove injurious or even fatal, just as it might in his normal condition.

This possibility is abundantly offset by the value of mesmerism as a therapeutic agent. The responsive can be made so intoxicated on water, which he has been told is whisky, as to exhibit all symptoms of extreme inebriety; can be made disgustingly sea sick by being told that he is at sea in a storm, and can be at once physically affected by an imaginary medicine. His temperature can be changed, his eye dilated and his pulse quickened. Mesmerism is as perfect an anæsthetic as ether, and as harmless as water. Any mesmerized person can at once, by a single stroke of the hand, be rendered totally insensible to pain, and can have a tooth drawn, a cataract removed, a cancer cut out, or an arm cut off without feeling the slightest pain. This has been so often demonstrated that amputations frequently take place under its influence in the Paris hospitals, and it is successfully employed in obstetrics. Though only a fraction of patients will be found eligible as candidates for this annihilator of pain, its utility is so obvious it cannot be long before medical societies will take up the therepeusis of mesmerism as a serious study, and army surgeons will be required to have as practical a knowledge of it as of any part of the pharmacopœia.

It is quite erroneous to suppose that the conduct of the responsive is directed in detail by the operator. He only suggests the general line of thought, and each responsive pursues it according to his own knowledge, experience or prejudices. I say to my responsives, for instance, that I have a wonderful educated cow with seven heads. They all want to see it. I call their attention to the imaginary stable door near by; they look toward it, and when I snap my fingers they all see a seven headed cow enter. Now, by questioning them it becomes obvious that they all see a different cow. Unless I have designated her color one sees a white cow, another a red cow, and so on.

Then I tell them that she can dance, can waltz and keep time with music. I hand one a cane, telling him it is a flute, and that he is an eminent performer, and he goes through the motions of playing to the dancing cow. They all hear different tunes, but the exhibition is satisfactory. I now add that the cow can sing—ran sing a different part with each mouth—can sing seven ballads at once. At this point there is some incredulity expressed. They see the cow stand up on her hind legs and hear the seven ballads—and this, I may as well add, is the narrative of an actual experiment.

Five of the six mesmerized persons believed that she sang. "She is singing 'Tit Willow,'" said one. "And 'A Warrior Bold,'" said another.

"I hear singing," said the incredulous one, turning to me. "'Annie Laurie,' isn't it? How do you work her—the machinery, I mean?"

The others laughed at him. "Why, the cow sings," said a young lady. "Can't you hear her sing? Can't you see her sing?"

"She looks as if she sang," conceded Incredulous. "I see her mouths move all around. She sounds as if she sang; but she doesn't sing. Cows don't sing."

"Very well, what is it, then?" asked one of the others.

"A tube and a hole in the floor," said Incredulous, "or perhaps ventriloquism."

"Awl" exclaimed the first, derisively, "ventriloquism does not work like that. I've made a study of ventriloquism."

"Well, I've made a study of cow!" persisted the scoffer obstinately.

Sometimes I turn the responsives into children, and have them play school with infinite fun; sometimes transport them over ocean to Africa or Japan on the enchanted carpet, where for a brief space they enjoy all the delights of travel; sometimes we participate in battles, in political campaigns, in exciting tirade, and sometimes Socrates, Moses or Confucius is introduced and interviewed, the intelligent responsive furnishing both questions and answers in a curious dual action of the mind that is highly entertaining.

Not only the reason sometimes rebels as above, but the conscience also. As a rule responsives can be completely dominated and made to do anything of which they are physically capable. They could generally be induced to take poison, or jump off the house, or throw themselves under a locomotive, or attack one another with deadly weapons. But there are some exceptions. I was unable to overcome the fear of one of my responsives, whom I sent to assault an imaginary Indian in the park. He refused to go, and said it was "difficult to kill an Indian."

A young lady, one of the brightest sensitives I have ever seen, steadfastly refuses to play cards. I tell her she is Buffalo Bill, and easily induce her to assume his character, but when cards are suggested, "No, I never play cards. It is wrong!" she says, and I cannot move her. I could make her jump out through the window or put her hands in the fire, but play cards she will not. I was puzzled by it till, inquiring, I ascertained that her religious parents had brought her up very strictly and taught her it was "wicked to play cards."

And this brings us to the question much mooted of late, whether crime can be committed by the aid of mesmerism. If so, it is brought into relation, not only with medicine, but with jurisprudence; not only with the pharmacopœia, but the penitentiary. It is obvious that if cases of this kind occur the one to whom punishment must be dealt out is the mesmerist.

I could probably induce any one of my responsives to take his life in my presence or to assault anybody within reach, but the mind wanders curiously in this strange condition, and generally takes little cognizance of surrounding objects. I have used the word "probably" in this sentence because the conduct of mesmerized persons cannot be positively predicted. The mental impression may not in a given case be sufficiently vivid and fascinating to induce action, or the influence may be counteracted by the moral sense asserting itself and overcoming the confused hypnotic tension. A. Croffut in North American

...of Wales continues to gain ...to his chagrin.

## Proposals.

Proposals for building a bridge across Bishop Creek at the point known as "Matlick's Ford."

NOTICE IS HEREBY GIVEN THAT IN pursuance of an order of the Board of Supervisors of the County of Inyo, State of California, made the 16th day of November, 1888, the undersigned Clerk of said Board will receive sealed proposals for material and labor to be used in constructing a bridge across Bishop Creek at a point known as "Matlick's Ford" in accordance with the plans and specifications now on file in the office of the County Clerk, which are now subject to inspection until Tuesday, February 5, 1889, at 12 o'clock noon of said day; bids to be opened between the hours of 2 and 4 o'clock p. m. of said day.

SPECIFICATIONS.

Abutments to be built of stone cut square and laid close without mortar, base of said abutments to be not less than four [4] fee wide, fourteen [14] feet long, two [2] feet at the top, by fourteen [14] feet long at top and four [4] feet above low water mark; foundation to be let down at least twelve [12] inches below the bed of said stream. Stringers to be 12x12 inches, 30 feet long (hewn or sawed) five of said stringers to be used and to reach the entire span of 27 feet between the abutments resting on timbers 8x16, 14 feet long, which are to be firmly bedded on top of abutments. Truss frames on outside stringers to be hewn or sawed 8x10 inches, and to be constructed as per sketch marked "A" (in plans). The rods supporting truss to be not less than one [1] inch iron running from top of braces through outside stringer and through cross sills, 8x12, 14 feet long, underneath of stringers securely threaded on bottom of the same, the foot of braces to be bolted through stringers with one [1] inch bolts. Planking to be 3x10 inches, 14 feet long, securely spiked on to the stringers. All material to be of good quality and to be built in a substantial and workmanlike manner. The person or persons to whom said contract may be awarded shall give a good and sufficient bond in double the contract price, to be approved by the Board of Supervisors, for the faithful performance of said contract. Proposals must be endorsed "Proposals for building bridge across Bishop Creek at the point known as 'Matlick's Ford.' The right is reserved to reject any and all bids. P. H. MACK,
Clerk of the Board of Supervisors.

## Proposals.

Proposals for building a bridge across Bishop Creek at the point known as "Rowan's Ford."

NOTICE IS HEREBY GIVEN THAT IN pursuance of an order of the Board of Supervisors of the County of Inyo, State of California, made on the 16th day of November, 1888 the undersigned Clerk of said Board will receive sealed proposals for material and labor to be used in constructing a bridge across Bishop Creek at a point known as "Rowan's Ford," in accordance with the plans and specifications now on file in the office of the County Clerk, which are now subject to inspection until Tuesday, February 5, 1889, at 12 o'clock noon of said day; bids to be opened between the hours of 2 and 4 o'clock p. m. of said day.

SPECIFICATIONS.

Abutments to be built of stone cut square and laid close, without mortar, base of said abutments to be not less than four [4] feet wide, fourteen [14] feet long, two [2] feet at the top, by fourteen [14] feet long at top and four [4] feet above low water mark; foundation to be let down at least twelve [12] inches below the bed of said creek. Stringers to be 12x12 inches, 30 feet long, (hewn or sawed) five of said stringers to be used and to reach the entire span of twenty-seven [27] feet between the abutments, resting on timbers 8x16, 14 feet long which are to be firmly bedded on top of abutments. Truss frames on outside stringers to be hewn or sawed 8x10 inches and to be constructed as per sketch marked "A" (in plans) The rods supporting truss to be not less than one [1] inch iron running from the top of braces through outside stringer and through cross sills 8x12 inches, 14 feet long, underneath of stringers, securely threaded on bottom of same the foot of braces to be bolted through stringers with one [1] inch bolts. Planking to be 3x10 inches, 14 feet long and securely spiked to the stringers. All material must be of good quality and to be built in a substantial and workmanlike manner. The person or persons to whom said contract may be awarded shall give a good and sufficient bond in double the amount of such contract price, to be approved by the Board of Supervisors, for the faithful performance of such contract. Proposals must be endorsed "Proposals for building bridge across Bishop Creek at the point known as "Rowan's Ford." The right is reserved to reject any and all bids. P. H. MACK,
Clerk of the Board of Supervisors.

MISCELLANEOUS.

### ORDINANCE NO 27.

THE BOARD OF SUPERVISORS OF THE County of Inyo, State of California, do ordain as follows:

The following rules and regulations are hereby adopted for the government of the County Hospital of the County of Inyo, State of California, and for the preservation of health with in the said county of Inyo.

SECTION 1. All persons on their admission into the Hospital shall deliver to the steward all moneys, articles of value, baggage, etc., except such necessary articles as may be required for immediate use; and the steward shall label them properly and keep them until such time as they may be required, giving the owner a memorandum of the same, and such persons must bathe and change clothes immediately on admission into such hospital, and thereafter on Saturday of each and every week.

SECTION 2. All patients who are able to be up must rise in time and be ready for breakfast; after which they must vacate the wards as far as possible during the day, that the beds furniture and floor of he wards may be cleaned. Every patient able to do so is required to come to the dining room for meals.

SECTION 3. Each and every inmate will be required at all times to perform any duty assigned to them, either as nurse, or assisting about the house, and a refusal to comply will cause an immediate discharge, such duties to be assigned by the steward, or by his orders.

SECTION 4. All employees are required to use the utmost kindness in dealing with the inmates, and under no circumstances will abuse of any kind be tolerated.

SECTION 5. No liquors of any kind shall be allowed to be used by any one, except by order of the physician in charge.

SECTION 6. Card playing, gambling, loud or profane talking, vulgarity or disorderly conduct of any kind is positively forbidden.

SECTION 7. No inmate will be allowed to leave the premises without permission.

SECTION 8. Begging from visitors is positively forbidden; also, smoking in the wards without permission; and every inmate is required to use every effort to promote cleanliness.

SECTION 9. Any inmate who shall introduce ardent spirits, cause any nuisance or disturb the house by quarrelling or fighting, or behave immorally or disrespectfully, in any manner, or circulate any book, pram or pamphlet of an indecent or immoral character, shall be immediately discharged.

SECTION 10. All patients who are able to be up are required to keep their beds and bedside tables in a neat and orderly condition.

SECTION 11. Visitors must not make presents to patients without permission from the steward. This rule has particular reference to fruits, pastry confectionery and liquors.

SECTION 12. Patients are required to retire at 9 o'clock p. m., at which time all lights unless otherwise permitted, are to be extinguished. No unnecessary conversat on will be permitted in the ward. No candles or other extra lights will be allowed in the ward without the consent of the steward.

SECTION 13. All violations of the above rules by the inmates must be reported to the physician to be dealt with by him or to be reported by him to the Board of Supervisors, at his option.

SECTION 14. The steward shall be subject to the orders of the physician in charge, and any violation of such orders shall be reported by said physician to the Board of Supervisors.

SECTION 15. For the purpose of carrying the provisions of this ordinance into effect the person in charge of said Hospital shall be considered to be the Steward.

SECTION 16. Patients can only be discharged by order of the physician in charge, and the said physician must keep a record of all such discharges, together with the date thereof.

SECTION 17. The Clerk must cause fifty copies of this ordinance to be printed on stiff card board for posting in convenient places, to be designated by the physician in charge of said Hospital.

SECTION 18. This Ordinance shall take effect and be in force on and after twenty five days from the date of its passage.

SECTION 19. This Ordinance shall be published, with the names of the Board of Supervisors voting for and against the same, in the INYO INDEPENDENT, a newspaper published in said Inyo county, at least two weeks; said publication to be made for said time and before the expiration of said twenty-five days.

J. D. HARGER,
Chairman of the Board of Supervisors of Inyo county, State of California.
Attest: P. H. MACK,
Clerk of the Board of Supervisors.

The above and foregoing Ordinance No. 27 was duly passed enacted and ordained by the Board of Supervisors of Inyo county, State of California, at a regular meeting of said Board on the 16th day of November, 1888, by the following vote:

AYES—J. D. Harger, J. R. Eldred and E. Robinson.
NOES—
ABSENT—

J. D. HARGER,
Chairman of the Board of Supervisors.
Attest: P. H. MACK,
Clerk of the Board of Supervisors.

Working Csses ATTENTION!

We are now prepared to furnish all classes with employment at home, the whole of the time, or for their spare moments. Business new, light and profitable. Persons of either sex easily earn from 50 cents to $5 00 per evening and a proportional sum by devoting all their time to the business. Boys and girls earn nearly as much as men. That all who see this may send their address, and test the business, we make this offer. To such as are not well satisfied we will send one dollar to pay for the trouble of writing. Full particulars and outfit free. Address GEORGE STINSON & Co., Portland, Maine.

SATURDAY, DECEMBER 22.....1888

Mr. J. Wilson came up from Darwin last Thursday and stayed in town a few days.

The members of the Masonic Lodge, at Independence, talk of giving a ball next month.

As usual, Wood has provided an abundant stock of all kinds of holiday goods Drop in and take a look.

Sullivan and Kilrain are matched to fight for $10,000 a side. Sullivan may be Kilrain, but Al, Cohol knocks him out every time.

Take the children to Rhine's store tonight and let them see the show; Bert has just spread himself and made a show worth looking at.

At Bert's menagerie are a great many more animals than Noah had in his famous collection. It don't cost anything to go in and see them.

Mr. E. O. Holbert is here on a visit with his brother, Fred Holbert. He came from New York, and will visit other parts of the State before returning.

At the Independence Hotel everybody will be treated to dinner on Christmas day. Levy will spread a glorious feast. See what he says in another column.

Samuel Chalmers writes that he is stoping out ore in his copper mine at Deep Spring. The vein gets larger as he advances upon it. It may prove to be a big mine,

Last Sunday there was a battle between whites and negroes in Mississippi. The report says twelve white men and one hundred and fifty negroes were killed in the battle.

Every train for days past has brought shipments of all kinds of goods for Rhine's store. Bert thinks the old gentleman has got struck with the boom idea since he went to the City.

Rev. E. McEvers will preach to-morrow —Sunday—at Lone Pine at 11 o'clock a. m.; Independence 7 o'clock, evening. Sunday school at the M. E. Church at 11 o'clock a. m.

Mr. J. C. Elly is much better the past few days, and if he continues to improve will be able to get out again soon. At one time his chance for recovery seemed very slight.

The new vestibule train makes the trip from New York to San Francisco in four days and six hours. The trip the other way takes two hours longer. A trip across the continent is now made in less time than the pioneers took in hitching up their teams to start on the journey.

Mrs. Orlando Evans died at Reno on Thursday of last week. She was married to W. T. C. Elliott in 1868. Ten years afterward she was divorced from Elliott; she was afterward married to Mr. Evans, who still survives her. She leaves two daughters by Elliott, but no children by her last husband. She was aged 48 years.

The United States Marshal has seized all the cut wood and coal on government land in the neighborhood of Eureka, Nevada. There is great inconvenience to the people in consequence. This action is in connection with the suits brought against parties for cutting timber belonging to the government.

The marriage of Mr. R. C. Spear and Miss Emma Duval united a very worthy couple. Mr. Spear has the virtues that do most to honor manhood, and Miss Duval has given ample proof of that unselfish devotion to those she loves, and that tenderness of heart that are the dearest charms of woman. May they be blest and happy in their union.

An apple orchard of good trees fairly well cared for will produce crops worth $400 per acre. This is equal to ten per cent on $4,000. Owens Valley has tens of thousands of as good orchard land as in the State, and the apples grown here have few equals and no superiors. There is an opportunity here in this direction out of which fortunes will be made.

The newspaper directory of N. W. Ayer & Son, of Philadelphia, for the year 1888, is out. It is a large, nicely bound volume and literally packed with valuable information. It is not only a newspaper directory, but it is a gazetteer of condensed information relating to the statistics and topography of the country and its general resources —agricultural, mining, manufacturing, commercial, etc. It contains about 1,100 pages. The price is $5.00 and it is well worth the money.

The case of Gruber against McMullen came up in the Justice's Court at Independence on Tuesday. Parties agreed that the case should be tried before a jury of four. Wednesday morning a jury was secured and the case was tried. The jury disagreed and were discharged; they stood two against two. A change of venue to Bishop Creek was demanded by the defendant and granted. The band of horses involved in the case are likely to be eaten up by expenses before the case ends. Thomas and Hill of Big Pine are interested in the case.

The late Michael Flynn got judgment in the Justice's Court at Bishop Creek, against J. M. Horton for a debt alleged to be due. Flynn died thirteen days after the judgment was given. Horton afterward appealed to the Superior Court. The attorney for the Administrator of the estate of Flynn moved that the appeal be dismissed, on the ground that it had not been taken within thirty days after judgment was rendered. Last Monday the motion was argued in Court, and was denied on the ground that when Flynn died there was no one upon whom notice of appeal could be served till an administrator was appointed. The case will go to trial.

The official recount of votes in San Francisco, show that Buckley has got control of the Legislature of the State and of the Board of Supervisors of San Francisco by the most outrageous fraud. In the original count the tools of Buckley counted enough votes to secure the result he aimed at, regardless of how the ballots had been cast by the actual voters. If this kind of work is permitted to go on, it is certain that we will in time come to the condition so long prevalent in some of the South American States, where every election was followed by a civil war, and the victors took possession of the Government.

### What Irrigation Does.

Three or four years ago Fresno was an insignificant village, with but slight prospect of ever being anything else. Now it is a city of 12,000 inhabitants. New buildings now being constructed will cost when finished at least $750,000. This wonderful change and enormous increase of property is due entirely to irrigation. The surrounding country was a desert, apparently fit for nothing but a sheep pasture. Irrigation has made it a region of fertility equal to any other in the State. What irrigation has done for the country about Fresno, it will do for Owens Valley. The five hundred square miles of good land in this valley that may be irrigated at a very moderate outlay, will be improved and increased in value equal to the land about Fresno. There the most valuable product of the land is raisins; here we can grow better grapes and we have a climate far superior to Fresno for making raisins.

### Wants to See the Sun.

A few days ago the Postmaster at Independence got a letter as follows:

TRAVER, TULARE CO., CAL.

POSTMASTER,
Independence:

What kind of a country do you have there, especially in regard to fog; or do you have any fog, and have you been having any for the last week or two? We have scarcely seen the sun in the San Joaquin Valley for two or three weeks, and I would like to find a location where there is more sunlight. Yours, &c.,

H. D. W.

The Postmaster informed this anxious inquirer that fog is never seen in Owens Valley. When rain sets in the clouds discharge their contents and disappear and warm bright sunshine follows. If this inquirer wants to enjoy sunshine this is the place for him, and if he wants to get into a beautiful and fertile country, let him come to Owens Valley and see for himself what a country it is.

### A Valuable Industry.

At the soda works, at Keeler, two thousand tons of crude soda are now ready for purifying. Of this twenty per cent, or four hundred tons, will be bi-carbonate of soda, worth seventy dollars per ton. The other constituents are worth thirty dollars per ton. The whole will therefore be worth seventy-six thousand dollars. The purifying is done by a process discovered and patented by Mr. B. F. Gray, Superintendent of the works. This process is much more effective and cheaper than the old way of working. The force of men employed has recently been reduced; twenty-one men are now at work, but many more will be employed next Spring. A great deal of work had to be done making tanks for purifying the soda; this is now nearly finished and purifying will begin in a few days. Thirty tons a day will be purified. The source of supply is Owens Lake, and is inexhaustible. The business will certainly grow to large proportions and be of immense value.

### Seeds and Scions.

Many kinds of seeds of plants suited to California can be had on application to the State University at Berkley. A new grass, highly recommended for dry soils, is called Japanese Wheat Grass. It has been tried at Berkley and does well. Another grass well recommended for dry soil is called Hairy-flowered Paspalum. Texas Blue Grass, Tall Oat Grass, Schraders Brome Grass, Hungarian Brome Grass, Esparsette, Small Clover, Black Medic, all these are highly recommended as forage and hay plants for dry soils. Tagasaste is suited to dry hill sides, it grows very large and makes valuable pasturage. Seeds of these plants can be got in packages of 2 ounces each, price 2 cents. Acorns of English oaks, 8 ounce sacks, 8 cents each. Cork oaks, small trees, 5 to each lot, 25 cents per lot by express. Olives, Nevadillo blanco, three plants to each lot, 25 cents per lot by express. Scions for grafting, apricots, apples and pears, 10 cents for each dozen ordered. For further information address

E. J. WICKSON,
Berkeley, Cal.

### An Important Decision.

Governor Stevenson, of Nevada, owns or controls a majority of the stock of the Kentuck mine at Virginia City. He is the sole owner of a mill that crushes the ore from the mine. The Board of Directors of the Company that owns the mine is elected by the influence of Mr. Stevenson. That Board made a contract with him for crushing the ore at his mill. The mill pays a large profit to the owner; but the mine does not pay profit to the stockholders. Suit was brought by the stockholders against Mr. Stevenson, and it is alleged that the contract he made with himself for crushing the ore is illegal. The case was tried before Judge Wallace, at San Francisco, where the office of the Kentuck Mining Company is located. The Judge has decided in favor of the plaintiffs. The case will surely be appealed to the Supreme Court; if that Court shall sustain the decision of Judge Wallace suits for vast sums will surely follow, as all the minas of the Comstock have been managed the same way, and most of the enormous profits of the mines have gone to the mill owners.

Christmas! Christmas!

Come to the Independence Hotel for a Turkey Dinner and good Warm and Cold Drinks. Come and try our Eggnog, Beef Tea, Hot Lemonade, etc.

H. LEVY, Prop.

Charlie Ferrie has what gives every indication of being a good mine at Darwin. Shipments of the ore sent to San Francisco have given $170 per ton silver and 70 per cent lead. Ferrie is taking out ore right along.

In Los Angeles and other neighboring counties the total destruction of vineyards is threatened by a disease called blackrot. The nature of the disease has not yet been discovered and no remedy has been found for it. Scientists are now studying the disease with a view to finding a cure or preventative for it.

The City Fathers of San Bernardino have passed a high license ordinance. Saloon license is fixed at $50 per month. Cheap John auctions $100 per month. Foot peddlers of goods $2.50 per day. Every dance house or cellar $10 per day. Applications for license must be accompanied by a bond with two or more good sureties for the sum of $2,000.

### MARRIED.

SPEAR—DUVAL—At the residence of W. L. Hunter, at George's Creek, December 16th, 1888, by Rev. E. McEvers, Mr. R. C. Spear to Miss Emma Duval.

### CERTIFICATE OF CO-PARTNERSHIP.

STATE OF CALIFORNIA, }
County of Inyo. }

We, the undersigned, do hereby certify that we are partners transacting business in the town of Big Pine, in the County of Inyo, under the firm name and style of Thomas & Hill, that the full names of all the members of such partnership are Robert Walker Thomas and Thomas Wheaton Hill, and that the places of our respective residences are set opposite our respective names hereto subscribed.

ROBERT WALKER THOMAS, Big Pine.
THOMAS WHEATON HILL, Big Pine.

In witness whereof we have hereunto set our hands this 27th day of November, 1888.

STATE OF CALIFORNIA, }
County of Inyo. }

On this 27th day of November in the year one thousand eight hundred and eighty eight before me, P. H. Mack, County Clerk and ex-officio Clerk of the Superior Court in and for the said County of Inyo, personally appeared Robert Walker Thomas and Thomas Wheaton Hill, known to me to be the same persons described in whose names are subscribed to and who executed the within instrument, and they acknowledged to me that they executed the same.

IN WITNESS WHEREOF, I have hereunto set my hand and affixed the seal of said Court, the day and year in this Certificate first above written.

[SEAL] P. H. MACK.
County Clerk and ex officio Clerk of the Superior Court.

By A. K. EGGLEY, Deputy.

[ENDORSED.]
Filed November 28, 1888.

P. H. MACK,
County Clerk.

### DESERT LAND FINAL PROOF.

D. E. No. 246.

UNITED STATES LAND OFFICE, }
INDEPENDENCE, CAL. }
Nov. 14, 1888. }

Notice is hereby given that James P. Mollet, of Lone Pine, Inyo county, Cal., has filed notice of intention to make proof on his desert land claim No. 246, for the S W ¼ of S W ¼ Sec. 2, S E ¼ of S E ¼ sec 3, N E ¼ of N E ¼ sec 10, N W ¼ of N W ¼ Sec. 11, Tp 15 S. R 35 E. M D M., before the Register and Receiver of the office at Independence, Cal., on Monday, the 24th day of December, 1888.

He names the following witnesses to prove the complete irrigation and reclamation of said land: Albert W. Simonson, John J. Stewart, William D. Eakin and Reuben C. Spear, all of Lone Pine, Inyo county, California.

JOHN W. P. LAIRD, Register.

## MARRIAGE GUID

260 PAGES. Illustrated. In Cloth and Gilt Binding, [illegible] money or stamps. Same, paper cover, 25c. This Book contains ALL the curious, doubtful or inquisitive want to know. Full of very interesting and valuable information. HEALTH and BEAUTY and HAPPINESS are promoted by its advice—who may Marry, who not, why. Medical Aid, when necessary, brought home to your [illegible] 50 Wonderful PEN PICTURES, [illegible] to all. Young or old, married or single, sick or well, should read. Sent by [illegible] WHITTIER, St. Louis, Mo. [illegible] AND SEND WITH ORDER.

### A Wearing Responsibility.

Bishop (to Pat, returning from work)—You look tired, Pat.

Pat—Oi am, sorr. It's a harrud day I've had, sorr, as foreman o' the gang—tin straight hours.

Bishop—Ah, Pat, we all have to work hard in this world. I often put in eighteen hours a day.

Pat—Yis, your rivirence, but your wurruck is alsy loike, and clane, and ye's hasent any responsibility.—New York Sun.

### Too Much Extravagance.

A papier mache figure of a dude was on exhibition at a recent state fair. It was a valuable instructor to the farmer, who considered it quite as much of a curiosity as the mammoth squash, and some grangers mistook it for a new brand of scarecrow; but, after all, it was a great waste of papier mache, and state fairs should not encourage such extravagance.—Norristown Herald.

### A Genius for Advertising.

A doctor in an Ohio town, who lives on a street leading to the cemetery, has a reversible sign. Usually the sign presents his name and office hours; but when a funeral passes, he turns it over, and then the following legend is displayed: "Not my patient; I cure all who follow my directions."—New York Tribune.

### Heartrending.

Miss Eva Ready (who has been spending the summer on a farm)—We had a terrible earthquake out in the country.

Miss City Tied—Indeed?

"My, yes; I heard Mr. Hay Seed, where I was boarding, tell his wife that all the corn was shocked.—Drake's Magazine.

### Accommodations for Both.

Occupant (of Boston herdic, to driver)—I say, driver, I paid you double fare to drive slowly!

Driver—Yis, sorr; but the other gint paid me double fare to drive fasht. Oill drive fasht half way, an' slow the other half. Get er lang there.—The Epoch.

### A Little Commission.

She (on board the yacht Fleetwing)—What are they doing, Lieut. Goldbraid?

He—They are weighing the anchor.

She—Oh, are they? Would you mind asking how much it weighs? I am so interested in everything of a nautical nature.—The Epoch.

### A Chicago Freak.

Chicago Man (on Chestnut street)—That gentleman I just bowed to is one of the most remarkable men in Chicago.

Philadelphian—Eh? In what way?

"He was born there."—Philadelphia Record.

### Too Much Better Than Not Enough.

Stout Old Lady (to druggist's boy)—Boy, d'ye keep a preparation for reducin' the weight?

Boy—Yes'm.

Stout Old Lady—Well, I don't eggsactly how much I ought to git.

Boy (diagnosingly)—Better take all we've got, ma'am.—Harper's Bazar.

### Stuck for a Word.

A Springfield teacher had given her class in geography some oral instruction about the middle states, mentioning among other things that the inhabitants were "enterprising, wide awake and go ahead people." The next day she was questioning the class on the subject, when a small boy replied to a question about the inhabitants that "they were enterprising, wide awake and"—here he was stuck for a word, but got it finally—"move on people."—Springfield Union.

### Inherited Dental Deficiency.

Dr. Cryer says, in The Philadelphia Medical Times, that he has among his patients members of the same family, representing five generations, each lacking the left lower lateral incisor tooth. An interesting feature of this remarkable instance of heredity is that one of the members of the same family has a supernumerary lower incisor.—Science.

### A Novel Writer's Thoroughness.

Mr. E. P. Roe was a believer in Ben Johnson's saying: "Easy writing makes hard reading." He carried his corrections even into the composing department of his publisher, often taking the proof reader's place and making changes just before the type was sent to the press room.—Cosmopolitan.

### A Fortunate Fish Inspector.

H. E. Childs, the lucky man who received on Thursday last $15,000 as his share of the ticket No. 46,755, which drew the first capital prize in the Louisiana State Lottery, drawn this month, is inspector of fish and foreman for DeButts and Daggetts, at their wharf, East Boston. He is 41 years old, medium height, light complexion, long blonde moustache, good natured and healthy.

He is married, owns a house in which he lives at Everett, and enjoys the fatherhood of one child. He is a Massachusetts boy, although he worked in New Orleans about 14 years ago, where he first became interested in lottery tickets. He brought five or six tickets while in New Orleans, and did not buy any more until this year. Altogether he has spent about $30 in their investments. He bought his last ticket the 1st of this month.

"It was lying in the desk and I never thought anything of it until I saw an announcement in the paper that my number was a success. I did not think any such luck could happen to me, but here I am hard at work and the possessor of $15,000. Of course it won't make any difference in my position. I get a good salary here and am satisfied. When the boys heard what happened they all went crazy and dragged me all over the dock so I set them all up and we had a good time."

The money came in the form of a check and is deposited in the First Ward Bank at East Boston, about the largest deposit ever made in the bank at one time. Mr. Childs has done nothing since his little fortune arrived but to whittle up all the loose wood on the wharf and smile to himself in quiet satisfaction.—*Boston (Mass.) Record*, Oct. 27.

## MISERY IN MOSCOW.

### The Merciless Barriers Which Separate the Poor from the Rich.

St. Petersburg is European, and half the things which pain one there are felt to be in some sort of association with the evils and vices of the West. But Moscow has its own miseries, and they are so intensely Russian, so characteristic of that vaster Moscow of which the old capital is merely the tiny center, that in becoming sensible of them one shudders, not for a community merely, but for a whole people. The contrasts which life offers in St. Petersburg are contrasts mainly between things which it is scarcely just to compare, between a well being which is foreign and a want that is native; but in Moscow wealth is elder brother to poverty, yet stands divided from it by a chasm as impassable as it is merciless. There is a distinct alliance of roughness and semi-culture between the rich merchant who does business daily in the White Town, and the wretched street vender whom he passes on his way a dozen times; yet the two are farther apart than the poorest and the richest classes in Western Europe. Moreover, poverty is so unspeakably miserable in Moscow that it seems to be the characteristic rather of a distinct species of the animal man than of any particular layer of the population. The streets daily yield figures which can only on general principles of anthropology be called human. The eye disentangles a face from these moving masses of rags but slowly and painfully; unless the inspection is at long range, the nose itself is too apt to protest.

The Russian summer calls innumerable peasant beggars and country paupers to Moscow. In the day time they explore the city from gate to gate, halting from time to time to beg alms or munch the fragments of black bread which form the chief spoils of their diurnal quest. Many women of this class are young and robust, fresh from the labors of the field; but some are old, infirm, haggard. All trudge about with the aid of a staff, and all wear a rude canvas bag tied around the neck. At night, long after the last vesper has died away, when the White Town is deserted and the suburban residences are gay with lights, with music, and with the laughter of the happy men and women, this vast army of the penniless and the miserable seeks its nocturnal repose Heaven alone knows where—on the forsaken field of the day's markets in the open air, on the steps of churches and cathedrals, or in the quadrangles and courts of palaces and public buildings. To be unutterably wretched and yet to be nightly sojourner in the "outer courts of heaven;" to be poor, and yet to fall asleep with only the thickness of a wall separating one from some of the most useless and costly accumulations of treasure in Europe, the conversion of which into money would furnish the means for banishing acute poverty from Russia altogether—such experiences as these are the lot of thousands to whom Moscow is less a place of pilgrimage than a centre of hot, weary, dusty life, a focus of burning despair.—*Atlantic Monthly.*

## FASHIONS IN MOURNING.

### The Caustic of Ridicule Cleverly Applied to Ludicrous Customs.

There are certain aspects of "Christian burial" which have grown so discordant with our more intelligent forms of social life that they have become even ludicrous, and can, therefore, be most wholesomely treated with the caustic of ridicule. Among cultivated people their natural environment no longer exists. They are more or less distinctly recognized as survivals. The dignity and impressiveness they may have once possessed has passed away. The most conspicuous of these is covered and described by the comprehensive name of "mourning." I have heard a brilliant society belle sorrowing bitterly over the fact that, just as her most impressive costumes were prepared for a season's campaign, the demise of a distant relative made it necessary for her to "go into mourning"—a fact which had but the one compensating circumstance, that "black was becoming to her;" indeed this final and determining factor in the case often enlarges the pale of relationship, within the limits of which funeral fashion makes the assumption of "mourning" imperative. In all the large cities stores may be found where the mortuary expert can determine to a shade the style of dress that constitutes "full mourning," and where the length of a vail is solemnly regarded as expressive of what Mr. Mould termed "filial affection." There is "mourning jewelry," "mourning stationery," "mourning etiquette;" and I know of one gentleman who carried his loyalty to these "modes and shows of grief" to the extent of having the blue ribbons that adorned his nightgown solemnly replaced with black! But the ghastly humor reaches its climax in the contemplation of "half mourning," or "second mourning." This symbolizes sorrow vanishing through the ministration of the milliner and the mantua-maker. It is an interesting but certainly not an edifying sight to see a blooming young widow pass through those various stages of grief which etiquette demands, from the midnight gloom of costly crape, through the subdued twilight of "second mourning," back to the full daylight of gorgeous color.—*Rev. John Snyder, in Forum.*

### How to Cork Political Prophets.

Blinks—There comes Jinks. Let's get away from him. He thinks he's a political prophet, and does nothing but bore everybody he meets.

Klinks—Let him come; I'll shut him up like a jackknife.

"Eh? You won't threaten to strike him, will you?"

"No; I'll offer to bet with him."—Philadelphia Record.

### For Once.

Maiden Lady—I think I will visit a chiropodist while I am in the city.

Friend—Have you corns?

M. L.—No.

F.—Bunions?

M. L.—No.

F.—Why, then, visit a chiropodist?

M. L.—I want to have it to say that I had a man at my feet once in my life.—Boston Courier.

## ENGLISH OFFICERS.

### One of the Weak Points in Great Britain's Military System.

The regular British army itself has never its full complement of officers, and the militia and volunteers are notoriously deficient in this respect, both as regards quantity and quality. Other nations suffer in the same way, but not of their own deliberate choice. When an army numbering several millions of men has to be dealt with, such as that of Germany or Russia or France, it becomes extremely difficult and expensive to keep up a proper number of officers in readiness for war, especially where the middle classes from which the supply must be drawn are comparatively weak in numbers and already caught to a great extent in the meshes of the military net. During the Crimean war we had to make a rule that Lieutenants should not be promoted to Captaincies till they had been two years in the service, and in 1870-71 the expenditure of German officers was so great that at the end of the war even lance-sergeants, (vice-feldwebel), in many cases, took the command of companies. In December, 1870, a Bavarian infantry division was so reduced by severe losses that it only possessed at the front a single captain of the line. There are people so enamored of the German system that they would follow it in its weaknesses since they can not in its strength, and ministers have been only too ready to snatch at any support in cutting down either officers or men. In this case it is to be remarked that the Germans only yield to a dire necessity of which they always complain, but they at least take care to keep up in peace the full number allowed them and to manufacture as many as they can for reserves by the one-year volunteer system. Officers thus produced have served a year in the ranks with, in addition to the ordinary soldier's training, constant tactical exercises, during which they have to learn the duties of officers. We, with more than Chinese absurdity, invite officers of the reserve to pass an examination in tactics, solely out of books; but have refused permission for them even to study the books under garrison instructors. No; they must go to "crammers," who, sensibly enough, spend their time in examining the examiners and discovering the odds for or against certain questions being put. I do not blame those extremely able gentlemen whose industry and common sense are brought in to supply a much-felt want, but I certainly question whether these examinations are of any practical value, and I find that officers of the militia and volunteers are moved by a certain healthy merriment when they discuss the subject. Trained or untrained, there are never enough officers even in the regular army to meet the waste of peace, much less of war.—*Fortnightly Review.*

## TEACHING OF MUSIC.

### What It Costs to Produce a Really Good Piano Player.

"How many music-teachers are there in Chicago?" a reporter asked one of the best-known instructors in the city.

"That," the lady replied, "would be rather a hard question to answer. There are at least two hundred who may be properly described as first-class teachers, and I am sure that nobody can tell the number of people who are engaged in teaching. You see music is an art which many persons consider themselves prepared to teach, who, perhaps, have not the necessary training, and it is a difficult problem to say just how many are engaged in the work."

"What are the teachers usually paid?"

"That again depends on the teacher," said she. "Some teachers get $3 an hour; others get $1 for the same time and practically the same results. The price which a teacher gets is really a matter of fashion rather than any thing else. No teacher can handle more than ten pupils in a day, and many will not attempt to take care of more than eight. Of course in what I have told you I have been speaking of the average music-teacher who does the greater part of the instructing in Chicago. Teachers of note always get at least $4.50 an hour; at the Conservatory they charge $15 for a course of twenty lessons, but as these lessons are only fifteen minutes for each pupil you can easily see that there is practically no difference. To play the piano well will require about five years' work, taking say two lessons a week. These lessons will cost $2 a week for the first three years, and for the last two years the lessons ought to cost $6 a week—that is allowing for two lessons a week only, you understand. This work and this expense ought to produce a good piano player, a product which is cheap at $936, which I figure upon."

And does it really take five years' work to produce a good piano player?"

"That is really the very shortest time. Ten years would be better. A classical player can not be produced in less than ten years. The piano is an instrument which takes a great deal of study. Next to the harp it is the most difficult instrument to play well there is."

"And how about singing?"

"Singing generally costs more. Good teachers want from $2 to $4.50 an hour. There are not so many singing teachers as there are people who are teaching music; the work is more difficult and requires much higher training."

Read me for my cause, and be patient that ye may read.—*Shakespeare.*

**THE GREATEST STUDY OF MANKIND IS MAN.**

And who e'er his wonderous frame doth scan, ponder and devise to cure an ill, whether by device, fruit or pill, an equal benefactor is he; and we haste, the inventor of a cathartic of delicious taste, to do him honor. Who remembers not how the distressed mother, her child's entreaties tries to smother, that she insist not the horrid dose be taken, the remembrance e'en now does nausea awaken, and fond father, to be witness of his child's torture, would rather pay high price, if money could purchase Cathartic nice. We have it now! And great De Prati's name, appears upon the scroll of Esculapian fame, for after long study what would suit, has hit upon *delicious fruits* to cure our ills. Away at once with draughts and pills; for whether it be indigestion, liver complaint, or constipation, or any disease to which flesh is heir, he here with pride does boldly declare, and on the assertion will wager big, that it can be cured by a HAMBURG FIG. Price 25 cents a box. At druggists.

*Dujardin's Life Essense* has restored vigor to hundreds of old-young men, who have exhausted their vital forces by dissipation, and other bad practices. It has given back youthfulness and strength whenever used. Price, $1.50 a bottle. All druggists.

## SCIENCE AND INDUSTRY.

—The heaviest metals in their order are tungsten, 17; uranium, 18.33; hammered gold, 19.36; platinum, 22; iridium, 23.

—There are but three factories in the United States in which crutches are exclusively manufactured, one each in Boston, Philadelphia and New York.

—Aluminum resembles silver in appearance, is stronger than steel, will not tarnish and is superior to silver for all purposes for which that metal is used.

—Bones disintegrate quickly in sea water. They are consequently seldom obtained during ocean dredgings, although teeth, which resist the action of the water indefinitely, are often brought up.

—Vegetarianism does not protect from cancer. In a hospital at Jeypore, India, during the last eight years, forty-one operations for cancer have been performed on the persons of meat-eaters, and sixty-one on strict and life-long vegetarians.

—A new glass, recently invented in Sweden, is said to be capable, when made into a lens for a microscope, of "enabling us to distinguish the 204,700,000th part of an inch." It is also said that there is great promise of this glass producing wonderfully powerful telescope lenses and a new departure in astronomy.

—According to a Chicago wagon-maker, white oak requires eighty years to mature; shell-bark hickory, from thirty to fifty years; tulip-tree, sixty or more years; and red or Norway pine, at least sixty years. Artificially grown, fifty-five thousand feet of these kinds of lumber may be obtained from each acre.

—There are in the German Empire between fifty and sixty manufactories of playing-cards, which in the last fiscal year turned out about 5,000,000 packs, of which about 1,000,000 were exported. About four-fifths of the production consisted of packs containing not more than thirty-six cards, and of the larger packs the greater part were exported.

—An English physician of note expresses in the *Lancet* the belief that consumption is due to a constant irritation of the air passages, and that cold air breathed at night is one of the greatest irritants. Those who live most of the time in the open air are the least likely to suffer from phthisis, because their lungs are so accustomed to cold air as not to be irritated by it at night.

## PUNGENT PARAGRAPHS.

—If a man sued for breach of promise were to set up the defense of temporary insanity he would certainly prove his case by reference to old love letters.—*Puck.*

—Live within your income, says the practical adviser; but if he would tell how one may live without it, he would have the merit and the glory of instructing a larger constituency.—*Boston Budget.*

—Judge (to prospective grand juryman—"What is your occupation?" P. G. J.—"Collector for the gas company." Judge—"You are excused. It would be impossible for you to bring in a true bill."—*Terre Haute Express.*

—A tin peddler down in Georgia the other day ate all the supper prepared for two families, drank several gallons of milk, then asked for a newspaper, and left the spectators hungry, but happy to be rid of him.

—A little pamphlet called "Humor in ye Sixteenth Century" shows that ye joker of that period borrowed a great deal of his wit from ye humorist of ye nineteenth century without giving a particle of credit.

You may set it down as a truth, which admits of few exceptions, that those who ask your opinion really want your praise.

### THE COMING COMET.

It is fancied by a grateful patron that the next comet will appear in the form of a huge bottle, having "Golden Medical Discovery" inscribed upon it in bold characters. Whether this conceit and *high* compliment will be verified, remains to be *seen*, but Dr. Pierce will continue to send forth that wonderful vegetable compound, and potent eradicator of disease. It has no equal in medicinal and health-giving properties for imparting vigor and tone to the liver and kidneys, in purifying the blood, and through it cleansing and renewing the whole system. For scrofulous humors, and consumption, or lung scrofula, in its early stages, it is a positive specific. Druggists.

"This world is round and like a ball
Goes swinging in the air,
Which may account, perhaps, for all
The folks not being square.

Mrs. Ridgway, of Smith's Cash Store, 418 Front St., S. F., Cal., will buy Christmas Gifts suitable for your children, your wife, your husband, your brother, your friend, your sister, or some other man's sister or brother you are interested in. Give particulars; do not delay.

Old Miser—Will you dine with me to-night? Young Goodliver—No, thank you. I am hungry.

The good reputation of "*Brown's Bronchial Troches*" for the relief of Coughs, Colds, and Throat Diseases, has given them a favorable notoriety.

How to Cure Skin & Scalp DISEASES with the CUTICURA REMEDIES.

THE MOST DISTRESSING FORMS OF SKIN and scalp diseases, with loss of hair, from infancy to old age, are speedily, economically and permanently cured by the CUTICURA REMEDIES, when all other remedies and methods fail.

CUTICURA, the great Skin Cure, and CUTICURA SOAP, an exquisite Skin Beautifier, prepared from it, externally, and CUTICURA RESOLVENT, the new Blood Purifier, internally, cure every form of skin and blood disease, from pimples to scrofula.

Sold everywhere. Price, CUTICURA, 50 cents; SOAP, 25 cents; RESOLVENT, $1. Prepared by the POTTER DRUG AND CHEMICAL CO., Boston, Mass.

Send for "How to Cure Skin Diseases."

Pimples, blackheads, chapped and oily skin prevented by CUTICURA SOAP.

Relief in one minute, for all pains and weaknesses, in CUTICURA ANTI-PAIN PLASTER, the only pain-killing plaster. 25c.

HAND-BOOK —OF— CALIFORNIA, 208 Pages, Profusely Illustrated. ISSUED BY Pacific Bank SAN FRANCISCO, CAL.

It is a Work pronounced by competent critics to be the best yet published on California. Printed in first-class style on calendered paper, and is embellished by over two hundred illustrations, selected and prepared with greatest care, especially for this publication.

Price, Postpaid, - - 50 Cents.

S. F. N. U. (First Series) No. 335.

Adelina Patti says that she means to make a liberal provision in her will for the education of poor girls with good voices. The good girls with poor voices may get married.

### WHICH WAS IT? BACON OR SHAKESPEARE.

The authorship of the dramatic productions attributed to the last of the above named is agitating literary circles to the very centre, but affects the practical masses far less than the momentous question, how to regain or preserve health, that essential to bodily and mental activity, business success and the pursuit of happiness." We can throw far more light on this latter subject than the most profound Shakspearian can on the question first propounded. If the system is depleted, the nerves shaky; if indigestion or constipation bothers one at times, or constantly; if the skin is yellow and tongue furred as in biliousness; if there are premonitory twinges of oncoming rheumatism or neuralgia; if the kidneys are inactive—use Hostetter's Stomach Bitters, the finest exponent of an age prolific in beneficial and successful remedies. Remember, if malaria threatens or afflicts, that it neutralizes the poison and fortifies the system.

Thy friend has a friend, and thy friend's friend has a friend; be discreet.

White Elephant of Siam, Lion of England, Dragon of China, Cross of Switzerland, Banner of Persia, Crescent of Egypt, Double Eagle of Russia, Star of Chili, The Circle of Japan, Harp of Erin.

To get these buy a box of the genuine Dr. C. McLANE'S CELEBRATED LIVER PILLS, price 25 cents, and mail us the outside wrapper with your address, plainly written, and 4 cents in stamps. We will then mail you the above list with an elegant package of oleographic and chromatic cards. Fleming Bros., Pittsburgh, Pa.

John B. Stagg was married in Newville, Penn., last week to Miss Margaret Clelland. Queerly enough, Margaret now calls Stagg her "dear."

### A GENERAL TIE-UP

Of all the means of public conveyance in a large city, even for a few hours, during a strike of the employes, means a general paralyzing of trade and industry for the time being, and is attended with an enormous aggregate loss to the community. How much more serious to the individual is the general tie-up of his system, known as constipation, and due to the strike of the most important organs for more prudent treatment and better care. If too long neglected, a torpid or sluggish liver will produce serious forms of kidney and liver diseases, malarial trouble and chronic dyspepsia. Dr. Pierce's Pleasant Purgative Pellets are a preventive and cure of these disorders. They are prompt, sure and effective, pleasant to take, and positively harmless.

The place honors not the man; 'tis the man who gives honor to the place.

### THE SPECIAL OFFER

Of THE YOUTH'S COMPANION, of Boston, Mass., which we published last week, should be noticed by our readers, as the opportunity comes but once a year. Any new subscriber to THE COMPANION who will send $1.75 at once, can have the paper free to January 1, 1889, and for a full year from that date. This offer includes four holiday numbers, for Thanksgiving, Christmas, New Year's and Easter all the illustrated Weekly Supplements, and the Annual Premium List, with 500 illustrations. Really a $2.50 paper for only $1.75 a year.

"What is the meaning of the word 'hero'?" asked a teacher in a primary school. "A man who hears well!" said a pupil, promptly.

### WOMAN'S WORK.

There is no end to the tasks which daily confront the good housewife. To be a successful housekeeper, the first requisite is good health. How can a woman contend against the trials and worries of housekeeping if she be suffering from those distressing irregularities, ailments and weaknesses peculiar to her sex? Dr. Pierce's Favorite Prescription is a specific for these disorders. The only remedy, sold by druggists, under a positive guarantee from the manufacturers. Satisfaction guaranteed in every case, or money refunded. See printed guarantee on bottle wrapper.

Patient—Change of climate! Why, Doctor, we've had all kinds of changes—rain, sunshine, heat, cold, calm and storms—right here within a week.

## KINDLING FOR FIRES.

### A CHICAGO MAN USES A CELLULOID TOILET SET.

**Pine Wood, Properly Prepared, Is the Best Material for Starting a Fire in the Stove—Utilizing an Old Flour Barrel—A Task.**

A west side man was called upon not long ago to make a fire. After searching about diligently for kindling and finding none, he took his wife's toilet set, and, it being of celluloid, the flames soon glowed vigorously. It is scarcely needful to say that this was during the temporary absence of his better half; but she found it out, and her lecture was not restricted to the extravagance of such a proceeding.

It is rather strange that this great city, with its manufactories of well nigh every material, has not a single kindling factory, or, if there be one, directory men fail to discover it. Understood, there are several places where the original article is prepared. One firm has a saw, or saws, propelled by a large engine, which turns out daily many cords of the commodity, cutting it into short pieces and tying it into bundles of convenient size, while nigh every factory using much wood sells the odds and ends for the purpose named. But there is no factory which turns out artificial material, such as prepared cake sawdust or resin—or kerosene dipped wood. This may be due to the cause assigned by a well known wood box manufacturer of this city who sells two or three thousand wagon loads of board ends annually. He said: "There can be no improvement made upon wood, pine wood, I mean, that being best of all. Given plenty of this and there is not the slightest difficulty in starting a fire in a moment, more quickly and satisfactorily than in any other way." Chicago people are shrewd and are not inclined to undertake the impossible. Wood being the best possible material, they stop at that. This, though, is provided in plenty, and the only good excuse for a failure to keep a supply at home is a lack of money.

The amount used is enormous. If one reflects for a moment that hundreds of thousands of fires are started daily, he will be ready to accept the statement that many thousand tons are consumed annually in Chicago alone. At several box, sash and door and furniture manufactories the reporter was told that ten or twelve years ago they found difficulty in getting rid of their kindling stuff, but that now all they have finds an immediate market. The increase in the demand is due to increase of population, of course. Of late, in particular, orders keep up with if they do not run ahead of the supply. Pine is the preferred wood, but all kinds are readily sold, if well seasoned and cut short, for this latter quality is as high a virtue in kindling wood as in a political speech or sermon.

The reporter would by no means be understood as saying that wood is the only material used in starting the fire upon the domestic hearth, or in the new patent stove or range. He would be derelict in his duty if he failed to refer to that article so popular with the average hired girl, the very danger in the use of which appears to add to its value in her eyes. It is needless to say that kerosene is meant. But the employment of kerosene is scarcely more hazardous than the chopping up of an old board or barrel into the requisite size for kindling. "Putting up the stove" has been the subject for a thousand newspaper jests, it being commonly agreed that to adjust the joints of pipe demands more patience than Job exercised during all his manifold trials; yet one who has had experience will doubt whether that be attended with so great danger or with such trial of patience as the attempt to chop kindling with an old ax or hatchet with serrated edge and with tendency to fly off the handle.

As to the danger, that inclines to the side of the chopper and splitter. One may once in a while fall from a chair when the pipe obstinately declines to joint or to enter the chimney hole; but one cannot well escape the perils which environ him who undertakes the task of converting a gnarled and knotted board, or a meek looking but weather beaten and shaky flour barrel into the A B C of fuel. If the ax do not come off and fall upon his head or back, some bit that seems to require the exercise of greatest force to break will yield with surprising weakness and fly full into his face. Or if he do escape these perils a long and ugly splinter is sure to pierce his hand and cause him to bless the whole business. The need for work of this kind diminishes year by year, thanks to a civilization which counts a duty the preparation of kindling wood for the people.

The heaven for the kindler of fires is in proximity to a southern swamp whose black loam bears upon its surface and within its depths the famous pine knot, or light 'ood, as it is called by the natives. Of all known woods this burns quickest, brightest, longest and best. Fairly saturated with resin, it is as quick to take fire as tinder. The people there use it not only as a substitute for candle or other illumination, but also invariably for the purpose of starting their fires, whether in the house of the wealthy planter or the cabin of the poor negro. The supply is apparently inexhaustible, and but for great expense of transportation no doubt its pre-eminent excellence as kindling would have caused its introduction and general use in Chicago and through the west. In its absence, its congener, the pine of the north, less firm and less resinous, is a favorite. But shavings, old papers and debris of all kinds come in as substitutes when negligence has led to exhaustion of the legitimate supply.

Given the best of material, however, there are many people who would find its use to the starting of a good fire a task of no easy accomplishment. Woman has come in for full share of ridicule here, it having been charged that she cannot start a fire any better than she can whistle or sharpen a pencil. That this is a slander upon the gentler sex is proved in the millions of cases of wives who preside over their own kitchens and the numbers of them who indulgently suffer their lazy worse halves to lie abed in winter mornings until fires are built and houses are well warmed. Still, it is none the less an art that must be acquired. Success will not follow the mere throwing together of a lot of kindling and the placing upon that of a quantity of wood or coal. The bits must be placed compactly, yet not so close together as to choke the draught. It is important, too, that a little time shall be allowed for the fixing of the flame before the fuel proper is added.—Chicago Herald.

**At the Costumer's.**

Customer—I wish a fancy dress. I wish if possible to appear as a bank cashier.

Costumer—I've the very thing among my ecclesiastical dresses. You must wear a stole.—Pittsburg Bulletin.

## GRAY-WHISKERED JOKES.

**Lew Dockstader Tries to Tell Which of All Chestnuts Fell First.**

The minstrel joke which is associated with my earliest recollections of the profession is the weathervane conundrum. I may say at once that all the old minstrel jokes took the shape of conundrums, the end man firing the questions to the interlocutor, who, after repeating it with a good deal of elaboration, would then announce his inability to answer. The squib to which I allude was brought on in the following fashion:

Bones—Can you tole me de reason dat dey never **put** a hen on top of a wedder-vane?

Interlocutor—No, Bones, I can not. What is the reason?

Bones—Because it's too much trouble to go up after de eggs.

But it is easier to point out an entire class of jokes among which the chestnut of chestnuts is probably to be found than it is to put your finger on the individual chestnut. And I am inclined to think that that class of jokes is the one which compares the human being in some way or other with the animal creation. Men have been wolves and foxes, monkeys and puppies almost since the world began. There is the puppy joke, for example, which has held the minstrel stage ever since I can remember, and which every year is renewed in some way or other, but is always the same joke. One of the old versions ran something in this fashion:

"Eph, I heard somefin' about Pompey yesterday. He went down to see his gal night afore las' and his gal has got a pooty little dog and she was huggin' and kissin' the dog and Pompey got jealous. Sez he to de gal: 'Jane, why don't you kiss me like you do de little dog?'"

"What answer did she make?"

"Why, she tole him dat she didn't kiss ebery puppy dat come along."

This form of witticism brought on the uncomplimentary reference by implication, such as, for example, the joke in Robertson's play of "Ours." This was either taken from the minstrel stage or the minstrel stage took it from the play, I don't know which. It arises during a game of bowls. A pretty girl is doing the bowling. A young man is complaining of his head aching, and the girl says some thing about the ball she is rolling. The young man misunderstands her, and asks if she refers to his head. She says no; she was speaking of that other wooden thing. There is no doubt that Sothern's famous witticism about the dog and his tail certainly came from the burnt-cork profession. It was usually told somewhat after this style:

Bones—What makes a little dog wag its tail?"

Tambo—Because he is glad to see his master?

Bones—No. It's because de dog is stronger dan de tail. If de tail was de strongest it would wag de dog, wouldn't it?

I am not sure but what the most venerable chestnut in existence is the looking-glass chestnut. The old form was about as follows:

"Sambo, you've told me considerable lies an' I see it's no use tryin' to get de truth out ob you for I see de villain in your face."

"Does you? Well, I never knew my face was a looking-glass before."

Now that retort courteous certainly dates back to the time of Shakespeare any way. Every one will remember how in "As You Like It," where "Orlando" and "Jacques" have their war of words in the forest "Jacques" finally declares with a significant nod that he was looking for a fool. "Orlando" replies promptly that if "Jacques" will look in the brook he will find him. The old grumbler says that he will see his own face therein and of course "Orlando" catches him.—*Lew Dockstader, in Philadelphia Press.*

**A Happy Discovery.**

"Boy," said a Woodward avenue grocer to a lad who was helping himself to grapes. "I don't recall that your father is a customer here."

"Don't you?"

"Never saw him that I know of."

"Then he must be a funny man. He's been dodging this store all summer, and I had figured that he was into you for about twenty-five dollars and couldn't raise the shekels. I'll go home and break the good news.—*Detroit Free Press.*

**From Examination Papers.**

Quotations from examination papers in a public school in New England:

Question—Define the word buttress.

Answer—A buttress is a female butter maker.

Q.—How many motions has the earth?

A.—The earth has two motions, involution and evolution.

Q.—Compare the adjetive ill.

A.—Positive ill, comparative, send for the doctor, superlative, dead.—*Boston Budget.*

**A Discreet Retreat.**

"What's the matter, Johnny," asked one of the neighbor's boys as his companion came out of the alley gate "Ain't finished your dinner a'ready, have ye?"

"Nop."

"Didn't ye get any?"

"Yep; but I did'nt stay to finish it."

"What made ye leave so soon?"

"Well, I said something at the table, and every body but Pa laughed."—*Merchant Traveler.*

—The talent of success is doing nothing more than you can do well without a thought of fame.

## A FEW HEALTH HINTS.

**Wearing Night Clothes—Dressing the Neck. Outer Wraps—Foot Coverings.**

It cannot be generally known that we practically breathe through the skin—in other words, that the skin has a function something like that of the lungs. It cannot, of course, be active unless kept clean. But in other ways than by neglect of cleanliness can its usefulness be impaired. Tight clothing cripples it and keeps the poisons which should be thrown out at the surface locked up in the system, and also shuts out pure air which should reach the skin. In purchasing underclothing, therefore, it should be so large that, even after frequent washing and shrinking, it will still be loose and permit of a volume of air between it and the body. It naturally follows that the outer garments should also be comparatively large, and at least enough so to permit every movement to be made with as much ease when they are on as when they are off.

There is a habit which all, without exception, should practice, and yet it is safe to say that not one man in ten of our people do follow it. Reference is made to the removal of the undervest on retiring, and the substitution of one kept for night wear alone. The underclothing, during the day, becomes filled with emanations from the body, and must be well aired regularly every night, otherwise it becomes to a considerable extent poisonous, and the noxious matters are again absorbed by the skin. This self poisoning is sure to go on unless the rule given is observed.

Safety from "colds" depends in no slight degree upon how the neck is dressed. Nothing should be worn about it which interferes with its freedom of movement nor should it be encumbered with handkerchiefs, which so many wear as much for appearance as for comfort. Let each one now choose a certain kind of collar, and wear no other style until spring comes. Even a very slight variation in this important article of dress will favor a sore throat. The habit of wearing the fashionable bandages—silk neckerchiefs—is an exceedingly bad one to get into, and, as a rule, those who have it are frequent sufferers from throat troubles. Practically the collar and neck tie will be sufficient protection for the throat. When the cold is intense, turning up the coat collar will be a sufficient additional protection, unless one is riding far in a strong wind.

When leaving the cold air and entering warm rooms, remove the outer wraps at once. Ladies fail to observe this rule oftener than do men. When people have been long enough in warm rooms to become heated, they should not leave them and at once enter their carriage or a street car. Under those conditions they are chilled even by a short ride. Before attempting to ride they should walk a few blocks, until the body is accustomed to the change and circulation is active. After one has been exposed to intense cold and is even slightly chilled, a cup of hot tea or coffee is advisable to "warm up." Alcohol, so often taken for the purpose, is more active, but seldom better than the simple, harmless beverages mentioned. During prolonged exposure to cold, as on a long drive, hot drinks should not be indulged in, for they render the body yet more sensitive to cold.

A word about foot coverings. Woolen stockings, of course, should be worn by all. Wear now heavy shoes and delay to put on overshoes as long as possible; when once they are on, keep them in service until next spring. Car drivers, conductors and other men out all day in the cold will be by far more comfortable if they discard leather boots and shoes and wear cloth shoes inside their overshoes. Then their feet will be better ventilated, perspire less and hence keep much warmer.—Boston Herald.

**Took Her at Her Word.**

A quaer episode in Connaught life was the case of the king at the relation of Dennis Bodkin versus Patrick French. The plaintiff and defendant were neighbors. The latter was of the "ould shtock," full of airs, and possessed of an intolerable temper. He and wife had conceived a deep dislike for Mr. Bodkin, who entertained an equal aversion to the Frenches. Bodkin had happened to offend the squire and lady. That evening they entertained a large company at dinner, when Mrs. French launched out in abuse of her enemy, concluding her wish "that somebody would cut off the fellow's ears, and that might quiet him." The subject was changed after a while, and all went on well till supper, at which time, when everybody was happy, the old butler, one Ned Regan, who, according to custom, had drunk enough, came in. Joy was in his eye, and, whispering something to his mistress which she did not comprehend, he put a large snuff box into her hand.

Fancying it was some whim of her old servant, she opened the box and shook out its contents, when lo! a pair of bloody ears dropped out on the table. The horror of the company was awakened, upon which old Ned exclaimed: "Sure, my lady, you wished that Dennis Bodkin's ears were cut off, so I told old Geoghegan, the gamekeeper, and he took a few handy boys with him, and brought back his ears, and there they are, and I hope you are pleased, my lady." The gamekeeper and the "boys" left the county. French and his wife were held in heavy bail at the Galway assizes, but the guests proved no such order was given, that it was a mistake on the part of the servant. They were acquitted. The "boys" and their leader never reappeared in the county until after the death of Bodkin, who lost his ears many years before his death.—Argonaut.

**The Magnificence of Civilization.**

Talking about the early days in California, there was an old fellow down in the country who was the first senator to go to the legislature from his district. His district was a rural one, and there were no houses—only cabins there—rough wooden cabins, with nails for hat racks and a rope for a wardrobe and a cracked looking glass for a dressing table. He went to Sacramento, and when he got back the entire district came in to call upon him, and he gave them a wonderful account of the magnificence of civilization in the capital of the state.

"Yas, boys; I had a china basin an' a cake o' soap scented by gosh; smelt like the flowers, an' there wor a little place in the wall with a row of big hooks in it, an' I said to the waiter, 'What's that for?' 'To hang your clothes in,' says he, an'—well, I didn't have any clothes to hang in it; but it wor splendid; but, boys, that wor nothin'. What do you think I had? A real bureau, a real, carved bureau, with a looking glass bigger'n this window in it. It wor gorgeous, gorgeous."—"Undertones" in San Francisco Chronicle.

Death foreseen never came.—Italian Proverb

## CITY OF THE DEAD.

**The Noted Russian Artist's Description—An Extraordinary Scene.**

Here is a graphic description by the great Russian artist, of the results of the Mohammedan rebellion against the Chinese government in the reign of Tchingutchak: "As you approach the town, it is hard to believe it is empty; you cannot help hoping to meet some human being, if it be only a robber. But not a soul is to be seen anywhere. The houses are for the most part uninjured, and likewise the paintings on the walls and the wooden lattice work of the windows. Potsherds and fragments of articles of every conceivable kind were lying all about—vessels of iron and clay of all sizes; a quantity of copper coins strung on a string; dresses, caps, plaits of hair, shoes of all sizes—the clumsy shoes of Dunghans and Calmucks side by side with the miniature slippers of Chinese women. I put a pair of extraordinarily small slippers in my pocket, as a memento.

"But, above all, skulls are to be seen lying about everywhere. The town is like a vast tomb, and the whole impression it produces is terrible. I wandered about a whole day in B's company, and then for several days alone, without being able to accustom myself to this stillness as of the grave, and to the sight of all these streets, chapels, theatres and squares standing forever empty. The gate of the fortress, which the besiegers had blown in, is still tolerably strong. Near the gate is to be seen the entrance into the subterranean gallery by which the besiegers, after a long and tedious siege, made their way into the fortress. Then came a merciless butchery, in which no one was spared. Skulls and bones lie literally in heaps against the walls here and all around the fortress; at many points, by several of the gates, the skulls were piled up to a great height. In the fields around the town, too, lie skulls; as far as the eye can reach, skulls, and skulls, and again skulls. The wolves and jackals have already done their work; the ravens are still engaged in picking the bones clean for the sun and rain to bleach.

"One of the farms in particular, which lies nearest the town, abounds in bones. A body of Calmucks, 15,000 strong, came this way to help the besieged, but a force of only a few hundred Dunghans fell upon them, drove them back and killed them to the very last man. What wonderful energy on the part of the insurgent Mohammedans! What cowardice on the part of the Chinamen! I had enough to occupy me. From the governor's palace to the simple little houses of the common people all the dwellings were habitable, all were painted, all decorated with paintings, sculptures, bas reliefs, flowers, dragons, etc. Theaters of an original construction, Buddhist temples in which some colossal idols were still intact (though the Mohammedans evidently showed great zeal in overthrowing these and breaking them in pieces), seemed almost to be waiting for the people to throng in to their prayers and their amusements. For three whole weeks I lived with one Cossack and one Tartar in a wretched cabin outside the walls of the fortress, and every day from morning till evening I roamed about, looking at everything, drawing and painting. Occasionally a wild goat would stray into the courtyard where I was painting, stand transfixed with astonishment, and then rush off at full speed across the brown and desolate steppe."—Current Literature.

**The Glory of Moscow.**

The glory of Moscow is the Kremlin, which is really the citadel, and within its stout walls are scores of churches and palaces. Here are the Cathedral of the Assumption of the Blessed Virgin, the Cathedral of the Archangel Michael, and dozens of other churches, the arsenal surrounded by 850 cannon taken from the French during the disastrous retreat of 1812. The magnificence of the churches and palaces in the Kremlin surpasses belief. The Church of the Annunciation has its floor inlaid with agate, cornelian, jasper, chalcedony and other precious stones, thousands and thousands of dollars worth of gems being thus laid down for a floor. In the Cathedral of St. Izaak, Alexander will see the tombs of all the czars down to the time of Peter the Great, who chose to be buried in St. Petersburg, an example which has been followed by all his successors. There are some dozens of tombs of emperors and empresses, for each czar chose to have a shrine to himself, and over the remains of each was erected a temple or cenotaph of considerable size, gleaming with gems of gold.

As a mediæval traveler said of the tomb of Thomas a' Becket that gold was the meanest thing seen on it, the same with propriety and truth might be said of the tombs of the czars, for some boast of a wealth of over $1,000,000 in precious stones which adorn each part of the shrine above the tomb.

In the Kremlin are preserved the imperial crowns and regalia of Russia; over twenty crowns are here, comprising not only those belonging to Russia proper, but those of countries conquered by the Russian armies, from the crown of Siberia to the crown of Finland, that of Poland, the Crimea, Astrakhan, the Caucasus and others being among the number, together with orbs, scepters, swords and royal chains and other jewels too numerous to count, and besides all these diamonds, rubies, garnets, sapphires, turquois, emeralds and pearls by the bushel are found in the imperial treasuries, too numerous to be set or even to be counted, so that a distinguished foreigner who many years ago, by special favor, obtained access to that part of the Kremlin in which are stored these important treasures, said that they lie in piles, in golden bowls and in silver cups, in such abundance as to defy enumeration or valuation.—Cor. Globe-Democrat.

**Combined Trunk and Wheelbarrow.**

A quietly dressed man presented a check at the baggage room in Danbury, Conn., the other day and received in exchange a neatly painted box, about the size of an ordinary trunk. A dozen expressmen at once desired his patronage. He smiled kindly, unlocked the box and took out a small wheel and two long and two short sticks. The long sticks he fitted into staples at the upper and lower opposite corners of the box. The short sticks then became cross pieces connecting the long ones and the wheel found a place between the lower ends of the long pieces. Thus, quicker than it takes to tell it, the man had transformed his box into a wheel barrow, and trundled it away. He returned in a few hours, repacked the wheel and sticks, and quit town on a westbound train. He was said to be an agent for a religious publication house, and resorted to the wheelbarrow device to save cartage money.—New York Sun.

It is estimated that one-half of all the drugs imported into the United States are consumed in the manufacture of patent medicines

## CARE OF THE EYES.

### WHAT SHOULD BE DONE DURING THE TIME OF CHILDHOOD.

**Parents and Teachers Must Exercise an Oversight—Carelessness of Nurses—Cause of Squinting—A Critical Period—A Couple of Good Rules.**

Many persons yearly make the very sad mistake of neglecting their eyes until they begin to see the mist before them, until the object they are looking at must be brought very close to the eye to be discerned, or until the print in the book they are reading becomes all blurred, and then, when in many cases it is too late to repair the injury that has been caused, they begin to seek advice. Every year there are hundreds of cases that come under the oculists' care that could have been cured if a few rudimentary principles had been known to or observed by the patient. These things everybody should know, but, perhaps, of all persons whose especial duty it is to know them, the mother has the greatest need of it. She, at least of all persons, should know that the human eye of the child whose infancy and the first few years of its tender childhood are especially entrusted to her care, for very often it is in infancy, when the child is yet but a few months old, and has not left the nurse's lap, that its little eyes are injured for life.

It is natural that, when we have arrived at middle age and begin descending the hill of life, our sight should commence to fail, but how are we to preserve it as long as it is possible? First, by having our competent mothers and nurses take care of them for us while we are yet infants. In a day or two after birth it will perhaps be noticed that the lids are swollen, and perhaps that some irruptive disease has set in. In such a case the mother or nurse will do well not to try to be doctor as well as occupying the trying position of either mother or nurse. A skillful practitioner should at once be called in to see the child, that is, if the symptoms become at all serious, because it is at this very time that the sight of the child may be seriously affected and perhaps permanently impaired. Above all things don't in such cases try mother's milk; neither be overanxious that the child may be hungry, and thereby overfeed it. Remember, first of all, that a low diet must be given in such cases; this is imperative. The child should at once be taken from a place where there is a strong light and kept in a room where the sun or artificial light has been subdued. A conscientious physician will in most cases be able to effect a rapid cure and save the child from untold agony, which it might have to endure when it grew older if neglected now.

CARELESSNESS OF NURSES.

Nurses frequently allow the child to lie in their (the nurses') laps, and in such a position that in order to gaze about it, the infant must roll its eyes until sometimes it is staring at objects over its forehead or with its head tipped back it is looking at objects upside down. The careful nurse and the thoughtful mother will never allow the child to recline in this position, or if they do, will place it so that there will be no incentive for it to look over its head. Sight is impaired in many children in this way.

When the child is teething is a critical time for its eyes, and later, when it is beginning to learn to read, be careful then that it does not acquire habits which, when it matures, cannot be easily eradicated. Observe how it holds its book, don't let it hold it up to its face and squint at it. Be careful also that it uses both eyes at the same time, because many children acquire the habit of using one eye and leaving the other unused, causing it in time to grow exceedingly weak. Primers and first readers should invariably be in large type, and the child should be made to sit up straight. Constantly leaning over a desk or a piano has a bad effect upon the eyes of children, which is fully equaled by a misfortune which befalls little girls, and that is their tresses falling down over their faces. It is supposed that squinting is caused in the brain, but it is well known that children inherit it. Many of these surrounding influences are indirectly the cause of squinting, and they should be most zealously guarded against. Always see to it that children have plenty of fresh air in the school room, and do not excite the child's imitative faculties. Many a child has been a squinter for life, made so by imitating a nurse or a companion who squinted for fun. This is a most pernicious practice, and one that is oftentimes indulged in by those who have the care of children because the child is so smart it mimics so well.

ANOTHER CRITICAL PERIOD.

The next very critical period is when the child has grown into a youth or maiden. Their constant study, or the too close application to an exacting occupation, will work incalculable injury. The young man or woman who is fortunate enough to discover this in time has reason to be thankful, for the skillful oculist may, if he has the patient in season, be able to do him some temporary good; but, alas! for those who are not aware of their true condition until they are frightened some day by the specter of luminous objects and black specks floating before them. They see undulating lights and objects that appear to be composed of a misty substance. When this state of things arrives the wise youth or maiden will at once show himself to a physician and get medical advice. If the defect to the eye is in its first stages the doctor will not be in any hurry to have you wear glasses. This is not so desirable as many suppose. Glasses are annoying to those who are forced to wear them, and if there is any way to avoid it, no one should be in any hurry to put them on. In the first place, a person who notices himself afflicted with these symptoms will seek rest. If he is a student, let him temporarily give up the companionship of his books and seek the companionship of nature.

Always it will be found that good sight is dependent to a great extent upon good health, and one should never, under any circumstances, neglect his general condition, no matter how trifling the circumstance or symptoms may appear to be.

A good rule to remember in caring for the sight is: Never read in bed; and another very good rule to observe (it is disregarded by almost everybody) is never to read on the cars.—Boston Globe.

**Barking Up the Wrong Tree.**

Magistrate (to base ball umpire charged with being drunk and disorderly)—It is simply outrageous, young man, the condition in which you are brought before me. You are a disgrace to the great national game.

Umpire—Wh-a-t! That'll c-h-ost you twenty-five (hic) dollars, judge. No back t-talk (hic) t-to me, or I'll fine you the limit.—New York Sun.

## A JAPANESE PRISON.

### THE INTERESTING THINGS SEEN BY AN AMERICAN CORRESPONDENT.

**The Prison Buildings of Tokio—An Empty "Punishment Cell"—The Workshops—A Curious Fact—The Women's Quarter at Ichigawa—A Case.**

With the exception of the Yoshiwara, of which plenty hereafter, the two prisons of Tokio are the most interesting things I have seen in Japan. These are, first, the great prison upon the Island of Ishikawa, at the south of the city, and, second, the convict and female prison of Ichigawa, in the center of the city itself. The former is completely isolated, all communication with the mainland being by police ferry, and contains 2,052 men and boys, all of whom are serving terms of ten years or less. The latter contains 1,400 men and 110 women, among whom are many serving life sentences. There is a convict farm attached, and it is here that capital punishment is inflicted. Otherwise the two prisons resemble each other so closely that it is not necessary to distinguish between them in description.

The entrance is through a massive wooden gateway into a guard room, adjoining which are the offices of the director and officials. The prison itself consists of a score or more of detached one story buildings, all of wood and some of them merely substantial sheds, under which the rougher labor, like stone breaking, is performed. The dormitories are enormous wooden cages, the front and part of the back formed of bars as thick as one's arm, before which again is a narrow covered passage where the warder on guard walks at night.

THE PUNISHMENT CELL.

On leaving the dormitories we passed a small, isolated square erection, peaked and gabled like a little temple. The door was solemnly unlocked and flung back and I was motioned to enter. It was the punishment cell, another spotless wooden box, well ventilated but perfectly dark, and with walls so thick as to render it practically silent. "How many prisoners have been in it during the last month?" I asked. The director summoned the chief warder and repeated my question to him. "Hitori mo gozaimasen—none whatever," was the reply. "What other punishments have you?" "None whatever." "No flogging?" When this question was translated the director and the little group of officials all laughed together at the bare idea. I could not help wondering whether there was another prison in the world with no method of punishment for 2,000 criminals except one dark cell, and that not not used for a month. And the recollection of the filthy and suffocating sty used as a punishment cell in the city prison of San Francisco came upon me like a nausea.

A Japanese prison may be divided into two parts—dormitories and workshops. Of cells or prison buildings, properly speaking, there is nothing whatever. Walking across the yard we entered the first workshop, where a couple of hundred prisoners were making machinery and steam boilers. One warder, armed only with a sword, is reckoned for every fifteen men, and here the prisoners were working on contract orders for outside firms, under the supervision of one skilled teacher and one representative of the firm giving the contract. So it was in the fine art department and every other of the score of workshops.

A CURIOUS FACT.

Prisoners employed at the higher classes of labor are credited with one-tenth the sum received for their handiwork. But as the work was so good and the running expenses seemed so light I was much surprised to learn that the prison was not yet self supporting, only seven-tenths of the total cost being realized from the sale of prisoners' work. Another curious fact is that every adult prisoner is detained for six months after his sentence expires if he is not claimed in the mean time by his friends, and until he is of adult age if he has not reached it and is unclaimed. These prisoners wear blue instead of red, after their sentences have expired.

The women's quarter at Ichigawa is separated from the men's by a high wooden fence and gateway guarded by a sentinel, and consists of two or three dormitories and one large, comfortable workshop, where all the 110 are employed together at labor let out by contract. When I was there they were all hemming silk handkerchiefs, each seated upon the matted floor before a little table, and very neat they all looked and very pretty some of them, with their loose red gowns and simply twisted hair. "Those are forgers," said the officer, pointing to three of them; "I do not like them to be so pretty." One of the women had a young baby playing beside her, and another of them, as she glanced up at us, showed a face entirely different from the rest, pale, sad and refined, and I saw that her hands were small and very white. It was Hanai Ume, the once famous geisha of Tokio, famous for her beauty, her samisen playing, her dancing, her pride, and most famous of all for her affaire d'amour.

**A Lawyer's Strange Client.**

"Sometimes a lawyer has some very queer clients to deal with," casually remarked a lawyer who has an office in the Garfield building, Brooklyn, to a reporter a few days since. "I think the strangest client I ever had," continued the disciple of Blackstone, "was one I met while practicing in New York. There was a man arrested for burglary, and I was retained to defend him. The case, I must say, was strong against him, but I succeeded in getting him off, and he paid me just $300 for my services. It was about a year later that I sat in my office when the acquitted burglar entered. I recognized him in a moment and greeted him cordially. Of course I had an idea he was in trouble again and wanted me to help him out. When I gave him a chair he had hardly seated himself before he exclaimed that he wanted $50, and he wanted me to give it to him. For a moment I thought he was going to rob me in my own office, but I mustered courage and asked him what he wanted it for.

"'Ask me no questions,' he replied, 'you'll be better off if you don't know. If I succeed I will pay you back; if I don't you will lose just $50.'

"I considered for a little while and finally concluded to give it to him. I did so, and he hurried out of my office.

"Three mornings afterward the morning papers told of a daring bank robbery in Maine, and the description of one of the suspicious characters who had been seen in the neighborhood of the bank tallied with my client. It struck me very forcibly at first, but I soon forgot it. Three months later I received a package from Australia by express and it contained just $500. With it was a note which read: 'Here is your $50 with interest.'

"I have not seen my client since advancing him the money, and I doubt whether I would let him have any more again, although the rate of interest is good."—New York Evening Sun.

The question is asked, why women always (with exceedingly rare exceptions) button from right to left, and men from left to right.

## HAD IT OUT WITH MARY.

**A Dauntless Housewife Nerves Herself and Has It Out with Mary.**

Two ladies were riding up town in a Madison avenue car, and as they traveled were overheard discussing the vital question of their domestic arrangements for the winter—the question of help.

"Yes, my dear," said the first, "I am in the valley of the shadow of new servants. My husband says my hair has turned several shades grayer since the last tour of the employment offices began. It exasperates me every time I see you to remember how long you have had the comfort of that treasure of yours who manages everything for you. I suppose she is still with you?"

"You mean Mary?" said the other. "Yes, she is still with me. I couldn't get along without her, but like most treasures she has gotten completely spoiled. She thinks she owns me and the house, and everything else. They all kept telling me at home that I must say something to her or she would get too high to live with. But I hated to say anything, I was so afraid of losing her. But last week I couldn't stand it any longer and I had it out with her. I tell you I felt positively worn out when I went upstairs, and they all scarcely believed me when I said, 'Well! I've had it out with Mary!'"

"Did you, really?" asked her friend, much interested. "How did she take it? And what in the world did you say?"

"Oh, yes," replied the courageous woman, "I thought it was no use trifling any longer. Even I could not stand such overbearing ways. Oh! I was very decided with her. She was quite dashed, I assure you."

"What did you say?" asked her friends eagerly.

"I looked her right in the eye and I said: 'Why, Mary!'" and the intrepid woman drew herself up with the air of one who has bearded a lion in his den.—New York Evening Sun.

**Thanks to the Band.**

"We desire to return our thanks," observed the editor of an Arkansas paper in his last issue, "to the members of the Galiusville cornet band for a serenade last night. The band can't play for shucks, and the music would have drawn a bowl of pain from an Egyptian mummy, but it waked us from a horrible nightmare in which we seemed to be standing at the door of our office and defending it against a sheriff who were horns and hoofs and had come to take possession of it. Notwithstanding the appalling character of the music, it was the sweetest sound that ever struck our ear, and we don't lay the serenade up against the boys. They didn't mean any harm, and they probably saved our life."—Chicago News.

**Rules in Case of Fire.**

A hotel in Nantucket has some original rules for warning guests "in case of fire." "Notify the clerk at once. He will be asleep in room No. 72, just back of the office. Notify the proprietor. Notify the night watchman. He will be asleep, as usual, somewhere on the premises. Return to your room and throw your trash and clothes out of the window; you can repack them on the piazza or in the back yard. Now try to discover where the fire is. In ninety-nine times out of a hundred it will be in some neighboring building, not ours. Don't forget to shriek all the time. It will be very soothing to nervous people."—Boston Journal.

**Stuce Wheat Went Booming.**

"I don't ask for much, ma'am," said the jaded tourist, humbly, "but if you can give me only a piece of bread"——

"Bread!" shrieked the lady, raising her hands in horror. "Only a piece of bread! I can give you some saddle rock oysters, roast turkey with cranberry sauce, and a glass of champagne, and if that isn't good enough for you, sir, you can go on to the next house. Do you take me for a millionaire?"—Chicago Tribune.

**Why She Raised Him.**

"How large your dog has grown," remarked Cora. "I remember when he wasn't any bigger than a kitten."

"Yes," returned Mrs. Lackheart in admiration, "as soon as he grows a little larger I am going to have a pair of lovely slippers made out of his skin."—New York Sun.

**Would Spoil Trade.**

Proprietor (to recently engaged waiter)—You will have to go, I can't keep you.

New Waiter—What's the matter?

Proprietor—Whenever a customer asks you if the fish is fresh you get red in the face. You'd break up the whole business in a short time.—Texas Siftings.

**Medical Changes.**

Citizen (to elderly physician)—You don't bleed patients as often as you did fifteen or twenty years ago?

Physician (looking over package of unpaid bills)—No, we don't bleed 'em at all; they bleed us!—Life.

**A Man of Honor.**

Ned—Say, Jack, can you pay that $10 you borrowed of me a week ago?

Jack (reflectively)—Ten dollars?—a week ago? Oh, yes—no; can't do it. Sorry, but ta-ta.

Ned—Hold on a minute. Can you lend me $10?

Jack—Why, m-m-m—certainly, old man, certainly. Glad to accommodate you!—Time.

**Natural Fears.**

Husband (a bank cashier, slightly under the weather)—If I should be taken away from you, darling, would it really be a very great blow to you?

Wife (sobbing)—Oh, dear, John, I hope you haven't been fooling with the bank funds.—New York Sun.

**Unredeemed Realism.**

Magazine Poet (enjoying his bed for breakfast)—Life is but a dream.

Landlady—Be you ever gointer git up terday so's I kin make yore bed?—Exchange.

**A Touching Work.**

A new novel has lately been published in raised letters for the use of the blind. It is said it evoked a great deal of feeling.—Terre Haute Express

# INYO INDEPENDENT.

**County Official Paper.**

C. Mulholland,
EDITOR & PROP IETOR
PUBLISHED EVERY SATURDAY.

INDEPENDENCE, CAL

SATURDAY DECEMBER 29..... ....1888

Georgia is the most progressive of the Southern States. The Legislature has appropriated $20,000 for the establishment of a Bureau of Immigration, which will advertise the resources of the State and invite desirable settlers. This action proves that the people of Georgia are outgrowing old prejudices, and warrants the belief that in time no hatred will be felt on account of politics, but that the right of every man to vote as he pleases will be as fully recognized in Georgia as in California or any other State of the Union. Till this right shall be fully established and recognized, not only in the Courts, but also in society, all other efforts to attract the most desirable class of settlers will meet with scant success.

In a talk about railroad management recently, Colonel Crocker said: "The Southern Pacific system is bound up with California. What benefits the State benefits us, and what injures the State injures us. Our prosperity depends on the prosperity of the State." These few words are worth serious attention. It is as true of all other railroads in the State as of the Southern Pacific that "what benefits the State benefits us, and what injures the State injures us." None are more desirous of promoting the general prosperity of the State than owners and managers of railroads, and for the very good reason that as individuals none have so much at stake. These facts should be kept in mind in all discussions of railroad matters.

In a lawsuit recently decided, involving a claim for damages for infringement of a patent, some very remarkable points are recorded. The patent is for an invention connected with the manufacture of carpet. Such lawyers as the late Roscoe Conkling, Senator Evarts and others of equal eminence were employed. When the case was brought up in the Supreme Court on appeal the documents produced weighed two tons. The representatives of the patent claimed twenty-eight millions, seven hundred and fifty thousand dollars damages. One witness was subjected to a cross-examination extending over two years. The company that owned the patent was finally beaten in the suit and got nothing.

Senator Stanford is doing good work in Congress for the protection of California interests. He opposes the Senate tariff bill because it proposes to reduce the duty on sugar, and also on fruits. Mr. Stanford is certain that the manufacture of sugar from beets will grow to be one of the leading industries of the State if it is not killed by tariff tinkering. The Senator says he dislikes very much to separate himself from his party in a matter of this kind; but he will not let the State be injured in order to help a party measure. As the Republican majority in the Senate is so small that the bill could not be passed against his opposition, it is tolerably certain that it will be changed so as not to injure California products.

A convention of raisin growers is called to meet at San Francisco on Saturday, January 19th, 1889, to consider matters in connection with the business. A system of grading and packing will be proposed; also change of names for different grades; the dropping of foreign names and emblems and the adoption of California names and emblems in their place. The various packers of the State will be called upon to prepare papers and essays with particular reference to the raisin industry, to be read before the convention.

The recount of votes in San Francisco discloses a great deal of daring fraud. Doctor O'Donnel, the independent candidate for Mayor, gained 550 votes on the recount. It is put beyond doubt that Phelps was elected to Congress, but hundreds of votes cast for him were counted for Clunie. No doubt is entertained that Congress will give the seat to Phelps. The Democratic and Republican County Committees are working together to discover the full extent of the frauds.

The Democratic House of Representatives want to take the duty off of lead, and the Republican Senate proposes to reduce the duty on sugar, raisins and fruit. Between the two the industries of the Pacific Coast fare badly.

The Courts of West Virginia will have no lack of work for some time to come. The Grand Jury have brought indictments against 700 persons for fraudulent voting.

The people of Nevada want to abolish their Supreme Court. The Reno Gazette says it is a fifth wheel to the wagon and an unnecessary expense. An amendment to the Constitution will be needed to abolish the Court.

## Proposals.

Proposals for building a bridge across Bishop Creek at the point known as "Matlick's Ford."

NOTICE IS HEREBY GIVEN THAT IN pursuance of an order of the Board of Supervisors of the County of Inyo, State of California, made the 16th day of November, 1888, the undersigned Clerk of said Board will receive sealed proposals for material and labor to be used in constructing a bridge across Bishop Creek at a point known as "Matlick's Ford" in accordance with the plans and specifications now on file in the office of the County Clerk, which are now subject to inspection until Tuesday, February 5, 1889, at 12 o'clock noon of said day; bids to be opened between the hours of 2 and 4 o'clock p. m. of said day.

SPECIFICATIONS.

Abutments to be built of stone cut square and laid close without mortar, base of said abutments to be not less than four [4] feet wide, fourteen [14] feet long, two [2] feet at the top, by fourteen [14] feet long at top and four [4] feet above low water mark; foundation to be let down at least twelve [12] inches below the bed of said stream. Stringers to be 12x12 inches, 30 feet long (hewn or sawed) five of said stringers to be used and to reach the entire span of 27 feet between the abutments, resting on timbers 8x16, 14 feet long, which are to be firmly bedded on top of abutments. Truss frames on outside stringers to be hewn or sawed 8x10 inches, and to be constructed as per sketch marked "A" (in plans). The rods supporting truss to be not less than one [1] inch iron running from top of braces through outside stringer and through cross sills, 8x12, 14 feet long, underneath of stringers securely threaded on bottom of the same, the foot of braces to be bolted through stringers with one [1] inch bolts. Planking to be 3x10 inches, 14 feet long, securely spiked on to the stringers. All material to be of good quality and to be built in a substantial and workmanlike manner. The person or persons to whom said contract may be awarded shall give a good and sufficient bond in double the contract price, to be approved by the Board of Supervisors, for the faithful performance of said contract. Proposals must be endorsed "Proposals for building bridge across Bishop Creek at the point known as 'Matlick's Ford.' The right is reserved to reject any and all bids.

P. H. MACK,
Clerk of the Board of Supervisors.

## Proposals.

Proposals for building a bridge across Bishop Creek at the point known as "Rowan's Ford."

INDEPENDENCE, CAL.

SATURDAY, DECEMBER 29.....1888

The market for horses at Los Angeles is reported to be quite dull.

Owens Valley will be south of the line of the eclipse of the sun on Tuesday next.

Blank mining Location Notices can be had at the office of the INYO INDEPENDENT.

Last Monday Mr. James R. Moffet proved up on a section of desert land nea George's Creek.

There was a ball at Lone Pine on Christmas night; it was well attended and passed off pleasantly.

The yield of wine this year from the vineyard of Senator Stanford, near Vina, will be half a million gallons.

Cyrus Reynolds and Will Sanger are matched for a foot race, date not given. Both are swift footed and it will be a good race.

Counsel for W. T. C. Elliott have asked leave to file a new bill of exceptions in the Supreme Court. This will likely cause further delay.

Mr. C. Levy has sold his farm near Bishop Creek to Rev. J. De La Matyr. The place contains 160 acres; the price paid is said to be five thousand dollars.

The following have been elected officers of the Masonic Lodge at Independence. J. W. P. Laird, W. M.; P. H. Mack, S. W; J. S. Gorman, J. W; O. I. Mairs, Treas; J. J. Moore, Sec.

It is reported that the Planchas de Plata group of mines, eighteen miles from Nogales, Arizona, has been sold to parties at New Orleans. The price is said to be $150,000, cash down.

Mrs. Reddy, wife of Hon. P. Reddy, is quite ill at San Francisco. Her brother A. R. Conklin, Esq., and Mrs. Conklin are staying in the City till the result of her illness shall be determined.

The Masonic Lodge at Independence has had the body of Dad Moore, Sheriff of Inyo county at the time of his death, removed from the burying ground at Camp Independence to the Masonic Cemetery at Independence.

At the Fire Tax Election last Saturday a large majority of the votes cast was against the tax. Tax payers hold that the benefits possible to be derived under the proposed measure were not proportioned to the tax intended to be levied.

The fellow who wants to "wet his whistle" in Oakland will have to pay high for the privilege or go with a dry whistle. Saloon license there has been fixed at $5,000 a year. License for selling by the quart is $2,500 a year.

The Southern Pacific Company wont keep in their employment anyone who smokes cigarettes. The Company have found that it is dangerous to have such weak minded individuals on their trains in any official capacity.

Mr. and Mrs. J. G. Birchim came down from Round Valley to spend the holidays at independence. Mr. Birchim is an inventive genius and proposes to introduce a method of making articles of convenience and comfort out of campaign hats.

Mr. N. Rhine got back last Saturday from a visit of several weeks to San Francisco. He purchased a very large stock of goods in the City, part of which has already been received and part is yet on the way.

Another stretch of two miles has been finished on the Eastside Canal. Mr. McIver is preparing to move camp in a few days. One mile beyond the present camping place is where the drop in the canal occurs and where a town is likely to be located.

Talk about a happy boy, oh! my, you just ought to see Charlie Nolan, station agent at Citrus. His mother sent him for a Christmas gift a gold watch and chain, and Charlie looks ever so much taller since he got it. The gift shows that Charlie has a kind mother and that she thinks he is a rather good boy.

David A. Strong, an old resident of White Pine, was found dead with his neck broken, a week ago, in his cabin at Hamilton. Deceased was well liked and highly respected. He had resided in that county since 1869. He was supposed to be a native of Rohester, N. Y., and was about 50 years of age.—*Enterprise.*

The Grand Army Post established at Independence is to be moved to Lone Pine, a majority of the members living there or in that vicinity. The officers elect for the coming term are S. A. Densmore, P. C; E. H. Edwards, Sr. V. C; J. J. Stewart, Jr. V. C; Charles M. Green, O. D; S. S. Andrews, O. G. The installation will be on Saturday, January 12th.

While bitter cold and violent storms raged in the East, on Christmas day the weather in Owens Valley was as pleasant as a May day in the East. During nine months we have not had one day of storm or unpleasant weather. Since the rains set in the weather has been warm and vegetation is making good growth. The old saying in the East went that "as the day lengthens the cold strengthens" but here the days are already getting longer and pleasanter, if possible, than before.

On Christmas eve the M. E. Church was filled to overflowing with people. The faint jingling of bells was heard and soon Santa Claus entered. A generous distribution of gifts was made and as happy a lot of children as ever enjoyed Christmas. Mr. H. L. Clark, Superintendent of the Sunday School and his scholars gave a very pleasant entertainment of singing and other exercises that was highly appreciated by the audience. The happiness of the children was enough to make every one love the Sunday School, even if it had no other aim or merit.

Mr. W. S. Enos is rapidly growing up a fine stock of horses. He now has seventy head of brood mares; among these are quite a number of the best strains of various breeds. He has a few very promising colts from the celebrated horse Fallis, recently taken to Kentucky under a contract for breeding. Mr. Enos contemplates going east soon for an imported Percheron stallion. Should he do so he will bring here a first class horse that will be of great value to the country. Several horse raisers have offered Mr. Enos to breed a large number of mares to the horse he may bring.

Ed Walker came up from Olancha last Thursday to visit the Tax-Collector.

Matt McDonald came up from Darwin last Tuesday and is staying in town.

Fresh pork by the carcass is selling for eight cents per pound at Independence.

Mr. W. T. Grant came in from Saline valley last Thursday and is spending a few days in town,

Property owners of East Bakersfield have subscribed funds for building a hotel to cost $100,000.

Michael Heenan, an uncle of John C. Heenan, died in the City Hospital at San Francisco last week.

H. Z. Osborne, of Los Angeles, formerly of Bodie, is strongly recommended for Public Printer under President Harrison.

The steamer Kate Adams was burned near Memphis, Tennessee, last Sunday. The loss of life is reported to be sixty persons.

An auction sale of town lots in Bakersfield was made recently. Many buyers attended the sale, Prices ranged from $175 to $400 per lot.

E. A. Reddy has been re-instated as Captain of the Guard at San Quentin prison. He had been out of office for some time.

Mr. P. W. Forbes assures the donor of the nursing bottle and contents that he appreciates the gift, but fears the milk will spoil before it will be needed in his family.

Farmers complain that they don't get price enough for their grain. With eggs at fifty cents a dozen and chickens six dollars a dozen it ought to pay to feed grain to the hens.

Mr. F. McIver, Superintendent of the Eastside Canal, has ordered thirty thousand grape cuttings for setting out on his own land in the spring. The cuttings will come from Woodland and Davisville, near Sacramento.

So far stockmen in Owens Valley have not fed any hay to their cattle this season. There is plenty of good feed on the pastures and grass is still making good growth. During the past few weeks alfalfa has made good growth; the recent warm rain has been very favorable.

Mr. J. R. Eldred and Mrs. Eldred and family came down from Bishop Creek last Wednesday. They will live in the dwelling now occupied by Mr. Gregg after he goes out of office. It is the intention of Mr. Gregg to return to Big Pine at the close of his term.

Willie was a good boy and got a rattle and a whistle from the Christmas tree. Two other boys each got a nursing bottle full of milk; one of these boys did'nt like his present and said naughty words; the other boy is fatter and laughed with glee when he got his bottle.

A good deal of work is being done in proving the grade and straigtening and widening the Stevens ditch. The ditch will be in good condition to supply water for several thousand acres of land early in the Spring. The land and canal are now valuable property and their values will rapidly increase.

By the explosion of a lamp at San Miguel last Monday evening half a block of buildings was burned, including the Central Hotel, and Littlefield's, Cole's and Schaff's stores, also the shoe store of Mathevers. Loss, about $15,000; mostly insured. B. O'Keefe, who was sleeping in the hotel, was badly burned about the face

At his place at George's Creek Mr. James R. Moffet planted some young Monterey cypress trees two years ago. They have made fine growth and are now beautiful trees. It was doubted if Monterey cypress would grow in Owens Valley, but Mr. Moffet has removed the doubt; and last winter was the coldest known here in many years.

The best memorial of the late William Sharon now stands in Golden Gate Park, San Francisco. In his will he gave $50,000 to the Park, to be expended by the Commissioners. A large and handsome building has been erected, and furnished for the use and enjoyment of children. All kinds of plays and amusements that were thought would give children pleasure are provided, and the little ones can go there and enjoy themselves at all suitable hours. This is a gift that does honor to the memory of the giver.

### Hurry Up

Remember that unpaid taxes will be delinquent on Monday evening at six o'clock. There is no time to lose in settling up. In this connection it is a great pleasure to state the fact that the delinquent list will be very small.

### Pleasant Affair.

The members of the Odd Fellows Lodge at Bishop Creek, and other friends, gave a parting reception to Mr. and Mrs. Eldred on the eve of their leaving Bishop Creek for Independence. The party was largely attended and was very pleasant to all concerned. Some handsome presents were made to Mrs. Eldred on the occasion. This evidence of the friendship of neighbors will ever be a pleasant remembrance with Mr. and Mrs. Eldred; and when Mr. Eldred shall end his services as Sheriff the family will be glad to return among such kind friends.

### Aurora Mines.

The two English companies are having surveys made on the Walker River for sites for the new electric plants to run their proposed mills at Aurora, "twenty miles away." The Antelope mine continues to look well, and those interested are satisfied they are nearing a ledge of paying ore. Much good ore has already been taken out, but it has been in pockets. The Auroraus are in good spirits over the prospects of the camp.—*Chronicle Union.*

### Cinderella Wanted.

Horace Bellows wants to find a Cinderella; he found a slipper a few days ago, and would like to have the owner of the mate to it come along and claim this one. The slipper found is at the office of the INYO INDEPENDENT. No charge for this advertisement. The following is a description of the slipper:—It is 13 inches long, four inches broad, and weighs three pounds and a fraction over. It is bullet proof on the sole, being armored with wagon tire from heel to toe. Horace is a good looking young man, has plenty of property and wants a wife. His imagination has been stirred by finding this fairy slipper and he hopes the finding of it may lead to a correspondence with a view to—better acquaintance.

## AN IMPORTANT MATTER.

The following letter was received at Independence last week; it shows that the business men and capitalists of Los Angeles are interested in having railroad connection with Owens Valley. The writer of the letter is Vice-President of the California Bank of Los Angeles.

LOS ANGELES, Dec. 18, 1888.

DEAR SIR:—The Los Angeles Chamber of Commerce has been asked by several members of similar bodies to call a convention of the different organizations of this part of the State. The object is to provide for combined action in advertising our resources, inducing desirable immigration, the introduction of outside capital, developing railway, manufacturing, mining, agricultural and other improvements throughout Southern California. The committee appointed to arrange for this meeting has called a convention to convene at the Board of Trade rooms in Los Angeles on January 10, 1889, at 10:30 o'clock, a. m., and you are hereby requested to call on the organization you represent to send three delegates to said Convention and to extend an invitation to any organization in your locality interested to send three delegates. We would like to see representatives from Chambers of Commerce, Boards of Trade, Merchants or Fruit Growers Union, Horticultural, Pomological or other societies which are working for the general good. Please reply as early as you can in regard to what your organization will do and what other body you have invited so there will be no delay in carry out our plans.

Yours truly,
H. C. WITMER.

E. W. JONES,
W. E. HUGHES, } Committee.
H. C. WITMER,

Steps were at once taken to send Mr. W. S. Enos and C. Mulholland to attend the Convention as delegates from Owens Valley. But last Monday another letter came from Mr. Witmer, stating that the date of the Convention had been changed from January 10th to December 27th—Thursday. It was not possible for the delegates to get to Los Angeles at this later date. It is proposed to communicate with Mr. Witmer and arrange for a meeting of delegates from Owens Valley with the Board of Trade of Los Angeles at some near day when said delegates could attend. It is believed that if the other towns in the Valley would send delegates with those from Independence, the result of the meeting might be beneficial to all concerned.

### An Opening for Los Angeles.

A recent visitor to Los Angeles says business of all kinds is very dull. Merchants have large stocks on hand; there is but little sale and manufactured goods of all kinds are offered very cheap. All business men and capitalists realize the fact that the City is arrested in its career of progress, and before much more growth is possible new territory must be reached and new customers found. There is one direction in which, before all others, Los Angeles can look with the certainty of finding a large territory that will give her a profitable trade. That direction is toward Owens Valley. Here is a country that will give Los Angeles fifty thousand new customers if railroad is extended from Mojave to Keeler. In the country about Los Angeles towns were laid out during the boom excitement, and whole blocks of expensive buildings were erected that now stand without an inhabitant. The capital sunk in these now useless buildings would have paid for the extension of the railroad that would have brought Los Angeles the large, profitable and growing business of Owens Valley. It would be a good investment for the capitalists of Los Angeles to advance one-third of the money needed to make the extension. The amount required for the whole work would probably not exceed seven hundred and fifty thousand dollars. The business that the road would make for the City would be equal to big interest on two hundred and fifty thousand dollars. Even if that sum were given as a bonus for the extension of the road it would be money well invested. If some of the leading men of Los Angeles would come to Owens Valley, and see for themselves what a country there is here the railroad would be built in short order. If a delegation of leading citizens will agree to come here and investigate the truth of these statements, we will undertake to meet them at Mojave with carriages and convey them to Owens Valley and back to Mojave free of all expense to them. The Los Angeles Board of Trade should carefully consider this matter.

### School Libraries

A citizen had occasion to visit a schoolroom in Owens Valley a few days ago. He looked at the school library, and saw that the books were in the utmost disorder; they were scattered upon the shelves as if they had been thrown there with a pitchfork. Many volumes were without covers, and the whole appearance of the library indicated that the books were regarded as rubbish—many of them might be justly so regarded—and the bookcase as but a lumber closet. A very little attention on the part of the teachers would keep the books neatly arranged on the shelves. It is worth notice that in this library is one series of of volumes all arranged in complete order; there are about thirty volumes of this prodigious work, and it was plain that not one of them had ever been touched since they were first put into place in the library. School Trustees should consider the wisdom of spending large sums of money for works that no man, woman or child, will ever live long enough to read, and that no one shows the disposition to try to read. Methuselah or Mahalaleel might have been able to spare time for reading a score of large volumes upon the history of obscure tribes of savages; but life is now too short, and there is so much that is vastly more important to know, that the shorter lived people of to-day cannot afford to throw away time reading such works. There is need not only for better care of school libraries, but more judicious selection of books for such libraries.

### Satisfied Advertisers.

The following letter from Hale Brothers, Sacramento, shows that they are satisfied with the INYO INDEPENDENT as an advertising medium.

SACRAMENTO, CAL., Dec. 18, 1888.

MR. C. MULHOLLAND,
Independence, Cal.

*Dear Sir:*—Enclosed find $43.50 balance due on account. We here take occasion to thank you for favors extended to us during contract and trust to arrange satisfactorily with you again next Spring.

Very cordially,
HALE BROS. & CO.

It is not less satisfactory to say that all who have sent orders to Hale Brothers from Owens Valley have been perfectly satisfied with the goods received and with the honor and courtesy of the firm.

# HOLIDAY ANNOUNCEMENT!

Immense assortment of Presents for Old and Young just received at

NATHAN RHINE'S.

*TOYS IN ENDLESS VARIETY.*

Plush Goods and Fancy Articles of all kinds for Christmas and New Years.

Come Early and Secure Your Choice.

NATHAN RHINE.

### Quarterly Conference.

The First Quarterly Conference of the M. E. Church, Independence Circuit, will be held here on Saturday (to-day) at 2 p. m. Sunday services as follows: Love Feast at 10 a. m. Preaching service at 11 a. m.; followed by the Sacrament of the Lord's Supper. Preaching at Lone Pine, at 7 p. m., J. H. De La Matyr, Presiding Elder, will conduct these services.

### Machinery Ordered.

All the money necessary for buying machinery to bore for artesian water has been secured. On Thursday morning Mr. L. A. Anger sent away the order for the machinery and it will be here in two or three weeks. As soon as the machinery is received boring will at once be begun. All parties who subscribed but have not yet paid up are requested to be ready to pay by the time the machinery arrives, if not before.

### A Great Work.

The ninth volume of Alden's Cyclopedia of Universal Literature is fully up to the excellence of all the preceding volumes, and that is saying a good deal. This volume deals with authors whose names begin with G; it is rich in extracts from modern authors, from the English Gower of five hundred years ago to our own Grant. There are good translations from the best authors of France, Germany and Italy. There is no subject of interest to human beings but what is treated in the volumes of this great work. There is not a variety of taste in literature but can find something to please, nor any mood or condition of the mind but may find something in sympathy, something to interest. It is a notable proof of the wonderful improvements in book making that such a valuable and comprehensive work, bound in such handsome style can be sold for fifty cents per volume. Address John B. Alden, 393 Pearl Street, New York.

In Colton saloon license costs nine hundred dollars a year.

## BORN.

HARDY—At Laws, December 21st, 1888, to Mr. and Mrs. George H. Hardy, a daughter.

### The Apple in Love Matters.

In Scotland and in England the apple is a very popular divining medium in love matters. Part of this popularity is probably due to the common notion that the tree of knowledge of good and evil was an apple tree. Horace mentions the use of apple pips in love affairs. A lover would take a pip between the finger and thumb and shoot it up to the ceiling, and if it stuck it, his or her wish would be accomplished. Nowadays a maiden tests the fidelity of her beloved by putting a pip in the fire, at the same time pronouncing his name. If the pip bursts with a report, it is a sign that he loves her, but should it burn silently, she is convinced of his want of true affection for her. This is often performed with nuts instead of pips.

Gay mentions the common amusement of paring an apple without breaking the peel and then throwing the strip over the left shoulder, in order to see the initial letter of the lover's name formed by the shape the paring takes upon the ground. This is often one of the many divinations duly practiced on Halloween or All Saints' eve. Another way at the same season is for the curious maiden to stand before a looking glass combing her hair with one hand and eating an apple held in the other; the face of the future husband will then be seen in the glass looking over her left shoulder.

Mrs. Latham, in her "Sussex Superstitions," gives another apple charm. Every person present fastens an apple "on a string hung and twirled round before a hot fire. The owner of the apple that first falls off is declared to be upon the point of marriage, and as they fall successively, the order in which the rest of the party will attain to matrimonial honors is clearly indicated, single blessedness being the lot of the one whose apple is the last to drop."—Chambers's Journal.

### The Egg in Paris.

The Paris egg is the greatest of all mysteries, not so much for its sacred qualities as among the ancients, or for the strange germ of life that exists within it which has considerably worried modern scientists. It is still sacred, but to the dealer only, and the life principle which it contains sometimes indeed disturbs, in a non-scientific way, the digestion of the purchaser. To the American an egg is either fresh or it is nothing; that is it is nothing but an abomination. As an edible it is of such extreme delicacy that it does not know, and can not know, degrees of excellence. When it is not the very virgin purity of freshness it is fit for nothing but to be thrown at an unpopular orator or to be assigned to the tender care of that symbol of maternal patience, the setting hen.

It is not so in Paris. There the theory is quite different. The Paris egg loses its freshness, the line of demarkation between the yolk and the white becomes confused, there is an active generation of sulphureted hydrogen if it is kept in a warm place, or the germ of life slowly but surely merges into the flesh, bones and down of the incipient fowl. Still it does not lose its financial value. The best eggs, and they are usually good, are sold for boiling at three or four sous apiece. This is the standard. Then comes the second quality in which decomposition has just commenced, but is imperceptible except to fastidious persons, who object on principle to chemical changes in their food. As to other grades and qualities which the customer sees distributed in various places about the shop their price is not fixed.—Albert Suthiffe in San Francisco Chronicle.

### Good Family Management.

Men talk in raptures of youth and beauty, wit and sprightliness, but, after seven years of union, not one of them is to be compared to good family management, which is seen at every meal and every family gathering, and felt every hour in the husband's purse.—Current Literature.

## HEATHCOTE'S LUCK.

### He Wins $15,000 in the Louisiana State Lottery and has the Money Safe on Deposit.

For the past two weeks reports have been current in this city and vicinity that F. M. Heathcote, of Derrick City had received $15,000 by the drawing of the Louisiana State Lottery, Oct. 9th, and that the ticket held by him had been honored and that the money was placed to his credit in the Bradford National Bank.

A reporter visited Derrick City yesterday and upon inquiry for the "lucky man" was shown to a small, white-washed cottage, only a short distance from the depot.

The news gatherer introduced himself at the door and on going inside found Mr. and Mrs. Heathcote. The former is rather a small man, smooth faced, and blue eyes. He was attired in a suit of common working clothes, and heavy, thick-soled drilled boots.

His wife is a pleasant looking lady, with black eyes, and jet black hair. When introduced to the visitor, and told what was wanted, her eagerness to oblige verged on the point of excitement.

Mr. Heathcote's story when told, minus the queries, and several corrections on the part of his better half, was as follows:

"I first new positively that my ticket had won on Oct. 15th when I received a pamphlet from M. A. Dauphin, manager of the company in New Orleans, which contained a list of the lucky tickets, my own ticket being among the list. Wednesday, the 17th, I went to Bradford and gave my ticket, which was one-twentieth of ticket No. 46,755, to Mr. O. F. Schonblom, President of the Bradford National Bank, and he telegraphed to New Orleans and was immediately notified that the little slip of paper was good for $15,000 when properly presented. The bank then sent the ticket by American Express to New Orleans and the Lottery company sent back a New York draft for the full amount $15,000. I am thirty-four years of age and was born in Williamsport, where I learned the trade of boiler making in my father's shop. I came to the oil country eleven years ago from Jamestown, where I was married to Miss Carrie Kerns. We have one child, a boy eight years of age. It is about five years ago that I bought my first lottery ticket, and when I had bought this lucky ticket, I found that I had just expended $7 in all my five years purchases. I expect to invest about $2 each month hereafter. I never won before, but we cannot tell what may occur in the future. I cannot tell how I will invest this yet, as I have not had time to do much planning. I have been visited in the last week by nearly thirty real estate agents, gold mine sharps and such, who have something great for me to buy, but I am in no hurry to invest my suddenly acquired wealth. It is quite probable that I shall invest the larger portion in good oil property and the balance in a nice home for myself and family.—*Bradford* (Pa.) *Sunday Morning Star*, Nov. 4.

### Girls Written Up.

A public school teacher of Milwaukee has in her note book the following composition on "Girls," written by a boy: "Girls are very stuck up and dignified in their manner and behaveyourer. They make fun of boys, and then turn round and love them. I don't believe they ever killed a cat or anything. They look out every nite and say: 'Oh, ain't the moon lovely?' This is one thing I have not told, and that is they always now their lessons bettern boys."—Chicago Herald.

### Filial.

Wealthy but Economical Father—Do you know, my son, what strict economy would do for you?

Robert—I know what it has done for me, father, and I respect you for it.—Life.

### Senator Jones' Great Luck.

The senator (Jones of Nevada) has always been ready to take great chances. He believes sincerely in the outside help that comes from no one knows where to shape circumstances around the path of a lucky man so that success is certain. As an illustration of the peculiar luck which he has had at all times during his life when he has once given his mind to hunting for a specific result the senator related a story of his early life when he was a sheriff of a certain county in California. He said:

"We set out one day to go up a great canyon which was near my headquarters. There was no road to it; it was a most fatiguing route for any one to travel over; it was as difficult, owing to the necessary climbing up and down, to travel six miles in this canyon as it would have been twenty-five upon the open highway. I had one of my deputies with me. We were out seeking for certain violators of the law. About midday we had traversed half the distance necessary to go and we stopped for a rest. I pulled out my meerschaum pipe, for I was very fond of smoking even then. I loaded up with tobacco, when to my consternation I found that I had no matches and no material for making a light. My companion was not a smoker, and of course he had no matches. I was almost dying for a smoke. I hated to give it up, and in my wondering what I should do, I turned around and I saw a match lying on the ground in the sand near a little stream that came down through the canyon. The sight of that match actually frightened me. I looked all around to see if there was any one in sight. I looked up to see if there was anything passing over that way, and then I walked up and picked up the match. I said to myself: 'Of course it won't light; it's been lying on this wet sand.' But it did light, and I had my smoke. I never knew anything to beat that piece of luck, but I've had in many close calls in my life such similar evidence of good fortune that I can but believe to a certain extent in good and bad luck."—New York World.

### Joel and the Steer.

The people of East Killingly, in the adjoining county, think that a pretty funny thing occurred in that neighborhood not long ago. Mr. Joel Tagmas, who is the hired man of an East Killingly farm, has a reputation for mixing himself into every dilemma that can find no other unfortunate person to fool with.

One morning a few weeks ago Joel went to the barn to yoke a pair of very large untamed steers. The yoke was large and cumbrous and the bows were big, but he got the wooden loop over one steer's head and pinned him. With the next steer he had a wrestle, slipping about in the treacherous yard in his effort to hold the animal by one horn and carry the heavy yoke end with his free arm. Finally, by an inexplicable mischance, either the yoked steer twisted the other bow over Joel's head and below his arms, or else Joel fell into it, he doesn't know which. A moment later a neighbor approaching the house beheld the unhappy hired man yoked up with the frantic steer, his wild red face protruding through the big ox bow, skipping and plunging at terrific speed down the road toward him. Joel espied the neighbor, and at every jump he roared in sputtering tones:

"Head us off, —— it! head us off."

The neighbor succeeded in doing it, turning the team by dint of very active work into an angle of a stone wall. Then he nervously hopped around to the steer's head, meaning to release the animal before Joel was quite killed. It was at this point that the hired man manifested the striking originality of his mind and his disgust at the neighbor's lack of gumption at the same time. He yelled:

"Here, you! what are ye up to? Never mind the steer; come round here and unyoke me!"—Norwich (Conn.) Special to New York Sun.

### A Bit of Dramatic Criticism.

The varying emotions springing from a snow white gown of brocade given with a force and power that were cut low and worn over a tucker of fine old lace, evincing skillful expression of subdued passion and hanging sleeves of brocade puffed up so as not to conceal the apparent faults of elocution and antique girdle of turquois and brilliant medallions joined by a rare refinement of speech and motion which convey a gown of dead leaf brown cloth, slit up the sides and open in front over an earnestness which is never subordinate to the robe of black satin, which is a mass of jet ornaments from throat to hem, displaying a much higher order of dramatic ability than she evinced last season. —Norristown Herald.

### Selfish Man.

Cultured Dame—Just like a man! You grab the paper as soon as it arrives, keep it all to yourself, and then blame me for not being informed on matters of public interest.

Husband—Well, my dear, I'll read the paper aloud, if you wish. Let me see—"Another Ocean Horror."

"Oh, don't read that."

"'The Progress of the Campaign.'"

"I don't care for politics."

"'Issues of the Hour.'"

"Never mind that."

"'Science Solves a Problem.'"

"I hate science."

"'Mrs. Tiptap's Party—Description of the Dresses.'"

"Oh, read that."—Philadelphia Record.

### Work of a Story Writer.

In beginning to write a story, it is well to have a basis resting upon fact, either in circumstance or personality. For this reason the author should be able to dissect human nature with keen analysis. No trait, no eccentricity, no expression, in the broad volume which mankind constantly opens before him should escape his attention, but everything he sees should be stored up as valuable material in his literary laboratory. A fitting combination of individual traits in different persons can be assimilated in one mental creation, although a just consistency must be observed. It is often amusing to an author to find his stories read and discussed by the very persons whom he has embodied in his hero, with never a suspicion, on their part, that their own characteristics have formed a ground work for the interesting fiction.—

## THE SURPRISE.

Joy met Sorrow in a place
Where the branches interlace,
Very secret, still and sweet,
Safe from all profaning feet.
"Why art here?" Joy, startled, cried:
"Why art here?" gray Sorrow sighed

"I came here to weep," said Joy.
"Tears are ever my employ."
Murmured Sorrow—"Yet I see
Tears as grateful were to thee.
Come, young novice, and be taught
How to ease thy heart o'erfraught."

Joy sat down at Sorrow's feet,
And was taught a lesson sweet.
Pain would he make kind return:
"Sorrow, art too old to learn?
Nay? Then tarry yet a while,
Till I have taught thee how to smile!"

Since that hour the two have been
Bound as by mysterious kin;
Since that hour they so exchange
Tears and smiles, 'tis nothing strange
If sometimes a puzzled heart
Scarce can tell the twain apart.
—Edith Thomas in Boston Transcript.

### Next Fourth of July.

A man who was making great efforts not to betray the fact that he was a great deal the worse for liquor halted a pedestrian on Monroe avenue and asked:

"Shay! can I ask you a few queshuns?"

"Yes, sir."

"Shee anything wrong wiz me, eh?"

"You? You appear to have imbibed too freely."

"Do I? Wonz you notice it if I was walkin' long?"

"I think I would."

"Do I talk like it?"

"Yes."

"Much 'bleeged. Wouz you try an' talk politics, few were me?"

"I would not."

"Get candidates all mixed up, wouldn't I?"

"You probably would."

"Might holler f'r Clezeland an' Harrison, eh?"

"You might."

"Much 'bleeged. You's true friend of mine. Do jess' you say 'bout it. Doan' want to give myself 'way, you know. Made up my mind I'd shee how zhrunk I was. I'm too zhrunk to talk politics, to go home or to shtay on 'er shtreet. Zherefore I'll sit down on 'er stairs. Goo'-by, ole fel—shee you Fo'th Zhuly!"

### Lie of the Loco Weed.

No other plant in the flora of Texas has enjoyed a greater notoriety than the famous "loco" or "crazy weed." Popular superstition has accredited it with a most remarkable property, and that is, the power of producing insanity in man and beast. Botanically, the plant is known as Astragalus molissimus. The extravagant stories that have been told about it recently led Mr. James Kennedy to investigate its properties and determine what physiological phenomena result from its action.

As the result of his investigations and his experiments upon animals feeding in pastures, Mr. Kennedy finds conclusively that the plant is non-toxic and innocuous and possesses none of the properties long ascribed to it by popular superstition. He thinks that the immense destruction of stock with which it has been charged may have been caused by some poisonous plant heretofore unsuspected, or if the "loco" really has produced death, it has done so by reason of the tough, fibrous and indigestible character of the plant acting as an irritant, and not as a poison.—Scientific American.

### How to Live Long.

Milk is not always admirable as a dinner drink, especially when fish plays any part in the menu. Tea or coffee taken with meat is simply suicidal. These hot beverages turn the meat into something resembling leather, and the result interferes sadly with digestion. The man who desires long life must not give a place to "high tea" in his daily programme. Of tea itself it can only be said that it is harmless if not taken too often or made too strong. The American lady who after several calls and a cup of tea at each remarked that she could "always worry down another cup" was probably unaware of the mischief she was doing herself. No one need totally abstain from tea if they only take the precaution to buy it good, not to make it strong, not to let it infuse long, never to take it more than twice a day and to abjure it after 5 in the afternoon.

The morning tab is indispensable to all who wish to live a long and healthy life. It is true that there have been centenarians who have known nothing of this luxury, but their longevity has been in spite of that fact, not because of it. The bath is good, but not too much bath. Walking is good, but it must not be overdone. Dickens overdid it. Most of us, however, underdo it, and scarcely walk enough. Flesh accumulates upon us in middle age because we do not take sufficient exercise, and then we give up long walks because we are stout and consequently lazy, thus reversing the process of cause and effect. The health suffers seriously, and a way is opened to many maladies.—Cor. London News.

### Wild Horse of the Plains.

So much has been written of the horse of the plains, which, foaled upon the dew kissed grass of the prairie, has never known a halter or the touch of a man's hand, that descriptive reference to their fleetness, wariness and oftentimes their graceful beauty, particularly among the stallions, would at this day lack interest. But one curious fact is known to but few aside from those who have followed them for hundreds of miles and studied their habits closely. If there are enough in a band these animals group by thirteens. With every stallion there are twelve mares. What becomes of the weaker males whom the stronger fight away—whether they bide their time to get the quota of females or, in the despondency of equine bachelorhood, go off alone and starve themselves—is not known. The matrimonial regulations of the wild horse, however this may be, allow to each male twelve consorts, and, the remarkable feature is, no more. They draw the line at an even dozen. Even when the bands that roamed these great plains, then tenantless except by other wild creatures, numbered in the hundreds and more than a thousand this peculiar division into families was plainly noticeable. They kept a little apart and never voluntarily mingled.—Colorado Cor. Chicago Tribune.

Dujardin's Life Essence has a marked effect on the sexual organs, restoring the torpid nerves, and soothing irritability. It is the only reliable and effective remedy we have. It is very palatable also. Price, $1.50 a bottle. All druggists.

S. F. N. U. (First Series) No. 336.

## EXTRAVAGANT LETTERS.

### The Pension Commissioner Writes About the Humors of His Office.

A few samples from among 10,000 instances will show the variety of the inquiries addressed to the Commissioner, and they are herewith submitted.

One woman in the best faith addresses the Commissioner and asks that he see that the school house in her neighborhood be established in the center of the district. Another informs him that her husband has long been absent. She has wandered over the face of the country in search of him, and she would now like to have him take up the search. Many such cases occur. Letters containing souvenirs dear to the senders, but utterly valueless to any one else, are received; letters of advice detailing whole pension schemes to be substituted for the present system of laws; letters of extravagant commendation, of censure, of anger, of contempt, of wrath, of unmitigable hostility; letters of insane writers threatening vileness and violence; letters excited by the granting of pensions and asking benisons upon the heads of all concerned; letters of bitterest reproach for pensions denied, calling down the wrath of God and men upon those who have been trying to do their simple duty—all these and multitudes of others, fantastic, sober, rational and wild, pour by the hundreds and thousands into the mail of the bureau; and from the charity and patience which forbears to respond, and the sense of duty which compels the neglect of idle inquiries, arise many of the complaints and denunciations of the office for its alleged neglect.

And now, to give in one huge total the figures which will show how idle such complaints in general are I need only say that the number of papers of every description sent to the Commissioner during the year has been 2,697,608. The number of answers immediately sent out thereto has been 1,836,182; the remainder being of the kind above indicated and those which require no reply until answered by the execution and transmission of proper documents in authentic shape.—*Commissioner's Report, 1888.*

### Beggars, but No Soap.

Beggary is an epidemic of fearful extent in Spain, but is most noticeable in Castile, where the soil, once so fertile, yields a bare subsistence and where there are no commercial enterprises to employ the idle.

We had heard so much of castile soap that an ardent desire possessed us to invest in a large supply upon its native spot, but the most persistent demands for castile soap failed to produce any, nor could we hear of a factory in Burgos.—Cor. Home Journal.

### Departure in Horse Trading.

What is termed "a startling departure in the line of horse trading" is reported from Fall River, where a citizen who has a mare for sale states frankly that her disposition is so sour that she hates herself, and that he would recommend the creature to nobody unaccustomed to horses.—Brooklyn Eagle.

### FAMOUS WOMEN.

It is a significant fact that most of the women who have achieved fame in art, literature, or "affairs," have enjoyed vigorous health. This shows that the mind is never capable of the severe and continued application necessary to creative work, unless the body is at its best. The woman who aspires to fill an exalted place among her associates, must be free from nervous debility and female weaknesses. Dr. Pierce's Favorite Prescription will banish these, and it is warranted to restore those functional harmonies which are indispensable to health. As a specific for all those chronic weaknesses and ailments peculiar to women, it is unequaled.

About every mail from China brings the tidings of floods in that Celestial Kingdom. It is evidently the land of the washee-washee.

### NEVER TRAVEL WITHOUT THEM.

Persons should never travel without a box of BRANDRETH'S PILLS. A few doses taken before going on ship will prevent sea sickness, and one Pill every night on ship-board will counteract the costive action of the sea air. When sick, troubled with pains, colds, or dizziness, or having rheumatism take from three to five Pills and if they do not operate in an hour or so take three or four more.

Poor Father Time! What a horrible old inebriate he must be!—that is, if it be true that time is money and that money is always tight.

### THE COMMON LOT.

There is a place no love can reach
There is a time no voice can teach,
There is a chain no power can break,
There is a sleep no sound can wake.

Sooner or later that time will arrive, that place will wait for your coming, that chain must bind you in helpless death, that sleep must fall on your senses. But thousands every year go untimely to their fate, and thousands more lengthen out their days by needful, timely care. For the failing strength, the weakening organs, the wasting blood, Dr. Pierce's Golden Medical Discovery is a wonderful restorative and a prolonger of strength and life. It purifies the blood and invigorates the system, thereby fortifying it against disease. Of druggists.

Samoa is in trouble again. It seems to be her chronic condition. As soon as she is once out of trouble she gets in Somoa.

### CONSUMPTION CURED.

An old physician, retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma and all Throat and Lung Affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send free of charge, to all who desire it, this recipe, in German, French or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. NOYES, *149 Power's Block, Rochester, N. Y.*

Coughs, Colds, and Sore Throat quickly relieved by "*Brown's Bronchial Troches*," 25 cts. a box.

See Antisell Piano advertisement.

MANLY PURITY AND BEAUTY

CUTICURA REMEDIES CURE SKIN AND BLOOD DISEASES FROM PIMPLES TO SCROFULA.

NO PEN CAN DO JUSTICE TO THE ESTEEM IN WHICH the CUTICURA REMEDIES are held by the thousands upon thousands whose lives have been made happy by the cure of agonizing, humiliating, itching, scaly and pimply diseases of the skin, scalp, and blood, with loss of hair.

CUTICURA, the great Skin Cure, and CUTICURA SOAP, an exquisite Skin Beautifier, prepared from it, externally, and CUTICURA RESOLVENT, the New Blood Purifier, internally, are a positive cure for every form of skin and blood disease, from pimples to scrofula.

Sold everywhere. Price, CUTICURA, 50 cents; SOAP, 25 cents; RESOLVENT, $1. Prepared by the POTTER DRUG AND CHEMICAL CO., Boston, Mass.

Send for "How to Cure Skin Diseases."

Pimples, blackheads, chapped and oily skin prevented by CUTICURA SOAP.

Rheumatism, Kidney Pains and Weakness speedily cured by CUTICURA ANTI-PAIN PLASTER, the only pain-killer plaster.

There is only one man more unfortunate than the victim who is compelled to wheel somebody through a howling crowd in the streets in payment of an election bet, and that is the fellow whom he wheels.

### WHICH WAS IT? BACON OR SHAKESPEARE.

The authorship of the dramatic productions attributed to the last of the above named is agitating literary circles to the very centre, but affects the practical masses far less than the momentous question, how to regain or preserve health, that essential of bodily and mental activity, business success and the "pursuit of happiness." We can throw far more light on this latter subject than the most profound Shakespearian can on the question first propounded. If the system is depleted, the nerves shaky; if indigestion or constipation bothers one at times, or constantly; if the skin is yellow and tongue furred as in biliousness; if there are premonitory twinges of oncoming rheumatism or neuralgia; if the kidneys are inactive—use Hostetter's Stomach Bitters, the finest recuperant of an age prolific in beneficial and successful remedies. Remember, if malaria threatens or afflicts, that it neutralizes the poison and fortifies the system.

Do not judge a man by his coat. Social standing to-day is based entirely upon the cut of one's trousers.

White Elephant of Siam, Lion of England, Dragon of China, Cross of Switzerland, Banner of Persia, Crescent of Egypt, Double Eagle of Russia, Star of Chili, The Circle of Japan, Harp of Erin.

To get these buy a box of the genuine Dr. C. McLANE'S CELEBRATED LIVER PILLS, price 25 cents, and mail us the outside wrapper with your address, plainly written, and 4 cents in stamps. We will then mail you the above list with an elegant package of cleographic and chromaticcards. Fleming Bros., Pittsburgh, Pa.

One thing may be said in favor of politicians' barrels—the fruit is uniform in size from top to bottom.

### GREAT LITTLE MEN.

Some of the greatest men that ever lived were of small stature and insignificant appearance. The reader will readily recall many instances. Very small are Dr. Pierce's Pleasant Purgative Pellets, but they are far more effective than the huge, old-fashioned pills which are so difficult to swallow and so harsh in their action. The "Pellets" are gentle and never cause constipation. For liver, stomach and bowel derangements they have no equal.

A contemporary says lawyers are noted for losing their patience. How about doctors.

FULL WEIGHT PURE
DR. PRICE'S CREAM BAKING POWDER
MOST PERFECT MADE

STOCKINGS! UNDERWEAR!

We want to tell you about our nice warm Stockings, Gloves and Underwear. It will not interest people in warm climates, but many of our patrons live in parts where the cold blasts of Winter make it possible to know the changes of seasons (different here). We make a great specialty of Furnishing Goods, warm Underclothing at low prices. Just now have an assortment of ladies wear—a job lot of over a wagon load at from 40c to $1.00 each in Vests or Drawers that are worth double the money, and some even more. We keep extra sizes up to No. 40 in Ladies', and No. 50 in Men's. Of the better grade goods, in Merino we sell regular goods from 50c to $1.00, and in all wool red or white, we have Ladies' at 75c, $1.00, $1.25, and Combination Suits, red or white at $2.50 each, that are excellent. Ladies' new style Knit Vests in colors $1.25. Children's, either red, white or grey at 35c up to $1.00, as to size and quality. Always give age and bust measure if you don't know the number for children. Be sure to state size every time, if not known, say if small, medium or large. We have Men's Common Shirts 40c, good value 50c, all wool grey, 75c, $1.25, all wool red, $1.00, $1.50, and extra heavy double for those may be exposed at $2.50, also, Marysville Flannel in blue grey at $1.50, or scarlet at $1.75. Extra sizes above 42 are 25c more. You ought to try our California made wool Hose, in Men's, Women's or Children's, 25c to 50c for best value. Ask for special list. These goods can be sent by mail at small cost. Address Smith's Cash Store, No 418 Front St., San Francisco, Cal.

POWDERED 98 CAUSTIC SODA, TREE WASH, Carbolic Sheep Wash.
T. W. Jackson & Co., 101 Market St., Mfg. Agents.

DWIGHT'S SODA
THE COW BRAND.
— TO MAKE —
DELICIOUS BISCUITS OR WHOLESOME BREAD
USE
DWIGHT'S COW-BRAND SODA OR SALERATUS.
ABSOLUTELY PURE.
ALWAYS UNIFORM AND FULL WEIGHT.
Be sure that there is a picture of a Cow on your package and you will have the best Soda made.
THE COW BRAND.
DWIGHT'S SALERATUS

ARM & HAMMER BRAND
*To Housekeepers and Farmers.*—It is important that the Soda or Saleratus you use should be White and Pure same as all similar substances used for food. To insure obtaining only the "Arm & Hammer" brand Soda or Saleratus, buy it in "pound or half pound" cartoons which bear our name and trade-mark, as inferior goods are sometimes substituted for the "Arm & Hammer" brand when bought in bulk. Parties using Baking Powder should remember that its value depends properly upon its containing a large proportion of bicarbonate of soda. One teaspoonful of the "Arm & Hammer" brand of Soda or Saleratus mixed with sour milk equals four teaspoonfuls of the best Baking Powder, saving twenty times its cost. Besides being much healthier, because it does not contain any injurious substances, such as alum, terra alba, etc., of which many Baking Powders are made. Dairymen and Farmers should use only the "Arm & Hammer" brand for cleaning and keeping Milk Pans Sweet and Clean.
OUR TRADE MARK
CHURCH & CO'S SODA
ON EVERY PACKAGE.
CAUTION. See that every pound package of "Arm and Hammer Brand" contains full 16 ounces net, and the ½ pound package *full* 12 ounces net, Soda or Saleratus same as specified on each package.
Packed in Card Board Boxes. Always keeps Soft.
SODA OR SALERATUS

My Poor Back!

That "poor back" is held responsible for more than its share of the sufferings of mankind. If your dog bites a man who kicks it, do you blame the dog? On the same principle the kidneys utter their protest against nervousness, impure blood, and resulting constipation. These force them to do extraordinary work in ridding the system of the poisons which are the result of effete matter retained in the blood. Then the sufferer says the back aches; the kidneys are diseased. "Not yet;" but they will be unless the nerves are strengthened, the blood purified, and the constipation removed. These are the causes of kidney troubles, and Paine's Celery Compound removes them quickly. With its tonic, purifying, and laxative effect, it also strengthens the weak kidneys, making it almost infallible in curing all diseases of the nerves and kidneys. If your hopes of cure have not been realized, try Paine's Celery Compound; it gives perfect health to all who complain of "their poor backs." *Price $1.00.*
